PREFACE

The advancement of any nation hinges critically on the strategic alignment of its developmental goals with the disciplined execution of leadership and the professionalism of its knowledge base. This proceedings theme: "Advancing National Development through Strategic Perspectives, Leadership Roles of Discipline and Knowledge Professionalism", explored the intricate dynamics between visionary leadership, the ethical compass of discipline, and the transformative power of knowledge as indispensable tools for sustainable development.

In an era characterized by rapid globalization, technological evolution, and socio-political complexities, there is a compelling need to reevaluate and reinforce the foundational pillars that propel national progress. Leadership is no longer confined to political office; it extends across academic, professional, and civic spaces, where individuals must demonstrate responsibility, foresight, and integrity. Equally, the value of discipline cannot be overstated, as it fosters accountability, order, and resilience in the face of adversity.

Moreover, this book underscores the significance of knowledge professionalism as a catalyst for innovation, informed decision-making, and the cultivation of human capital. The integration of strategic perspectives ensures that developmental initiatives are not only visionary but also rooted in pragmatic, results-driven frameworks.

This work draws from interdisciplinary insights and case studies to present a comprehensive view of how nations can harness the synergy of leadership, discipline, and professional knowledge to overcome developmental challenges and achieve long-term prosperity. It is intended for policymakers, scholars, students, and professionals who are committed to building resilient institutions and empowering communities through strategic engagement and enlightened leadership.

On the whole, the goal of this proceedings is to inspire a generation of change-makers who are guided by strategy, motivated by service, and anchored in the values that shape strong, forward-looking nations.

UNIQUENESS OF THE PROCEEDINGS

Unlike other proceedings, the unique characteristic of this is that it captures issues in Advancing National Development through Strategic Perspectives, Leadership Roles of Discipline and Knowledge Professionalism from a holistic perspective:

- The proceedings blend insights from leadership studies, development planning, education, ethics, and public administration, offering a multidimensional approach to national development.
- It emphasizes forward-thinking strategies tailored for both policy and practice, bridging the gap between theoretical models and actionable solutions.
- A unique emphasis is placed on how personal and institutional discipline reinforce effective leadership and governance.
- The proceedings uniquely highlight the role of professional knowledge not just academic qualifications in driving innovation, policy reform, and institutional growth.
- Unlike globalized or generalized development discourses, this work is rooted in the specific developmental contexts and challenges of emerging nations, with relevance to African and developing economies.

- Real-world examples, case studies, and evidence-based analyses provide a grounded understanding of how strategic leadership can be applied to current national issues.
- The proceedings stress the need for morally sound leadership where integrity, service, and discipline are central to developmental success.
- Contributions reflect voices from academia, policy, industry, and civil society, promoting a holistic and inclusive dialogue on national advancement.
- Forward-looking insights and policy recommendations focus not only on present-day solutions but on preparing nations for long-term sustainability and resilience.
- Content is tailored to respect and reflect indigenous values, cultural nuances, and socio-political realities unique to the target regions.

TARGET AUDIENCE

The target audiences for '2nd International Conference on Earth-Environment, Energy, Economics, Entrepreneurship, Estate, Education, and Strategic Development Innovations' that produced this proceedings include researchers, academics, professionals, students, and practitioners. This proceeding is conceptualized as a reference text. A profound examination of strategic leadership in disciplines, and the full development, use and implementation of it provides rewards for leadership professionals and practitioners, researchers, academics, and students because strategic leadership studies.

CONCLUSION

The editors are deeply privileged to edit the proceedings of the 2nd International Conference on Earth-Environment, Energy, Economics, Entrepreneurship, Estate, Education, and Strategic Development Innovations. We rose up to the challenge of eliciting papers from scholars in Africa. In total, there were over 141 submissions from which 112 were chosen, which have culminated into an excellent resource from multiple authors. This proceedings, which is derived from the '2nd International Conference on Earth-Environment, Energy, Economics, Entrepreneurship, Estate, Education, and Strategic Development Innovations is a coherent proceedings. We trust that organizations and institutions, and the academic community will find this volume a useful addition to the existing literature on 'Strategic Leadership and Capacity Building in Africa'.

RETHINKING SCHOOL ADMINISTRATORS' ROLE IN FOSTERING TEACHER AUTONOMY AND PROFESSIONAL DEVELOPMENT

Boma JAJA
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

Effective school administration plays a pivotal role in shaping teacher performance and student outcomes. However, the traditional hierarchical model of school leadership often restricts teacher autonomy, limiting opportunities for professional growth and innovation. This paper examines the need to rethink the role of school administrators in fostering teacher autonomy and professional development. The research highlights that empowering teachers through increased decision-making authority, collaborative structures, and access to professional development resources enhances job satisfaction, motivation, and instructional quality. School administrators can create an environment where teachers feel valued and motivated to innovate in their teaching practices by shifting from a top-down management style to a more participatory and supportive leadership approach. Key strategies include implementing shared governance models, providing regular professional development opportunities, and encouraging peer collaboration. The study also examines potential challenges, such as resistance to change and the need for adequate resources, and offers recommendations for overcoming these barriers. Findings suggest that fostering teacher autonomy not only improves professional engagement but also enhances student learning outcomes, as teachers are more likely to adopt innovative teaching methods and respond effectively to students' needs. This study underscores the importance of redefining school leadership to balance administrative oversight with teacher independence, ultimately creating a more dynamic and effective educational environment.

Keywords: School Administrators, Teacher Autonomy, Professional Development.

INTRODUCTION

In contemporary educational discourse, the role of school administrators is pivotal in shaping the professional lives of teachers and, by extension, the learning experiences of students. Traditionally, administrative roles have been characterized by top-down decision-making processes, where directives flow from the administration to the teaching staff. However, emerging research and educational paradigms suggest that this conventional approach may not be conducive to fostering teacher autonomy and professional development, both of which are

critical for enhancing educational outcomes. This necessitates a reevaluation of administrative roles to create environments that empower teachers and promote continuous professional growth. Teacher autonomy, defined as the degree of control and discretion teachers have over their instructional practices and professional decisions, has been identified as a significant factor influencing job satisfaction and retention. A study by the National Foundation for Educational Research (NFER) in 2020 highlighted a strong correlation between teacher autonomy and job satisfaction. The study found that teachers who perceived greater influence over their professional development goals reported higher levels of job satisfaction and were more likely to remain in the profession. Specifically, over 85% of teachers with high autonomy intended to stay in teaching, compared to about 50% with low autonomy (NFER, 2020). This underscores the importance of granting teachers agency in their professional endeavors to enhance their commitment and reduce attrition rates.

Professional development is another critical aspect of a teacher's career that significantly impacts their effectiveness and satisfaction. Traditional professional development programs often adopt a one-size-fits-all approach, which may not address the specific needs and contexts of individual teachers. However, when teachers have autonomy over their professional development, they can tailor their learning experiences to align with their unique challenges and aspirations. This personalized approach not only enhances their teaching practices but also fosters a sense of ownership and motivation. For instance, allowing teachers to select areas for skill enhancement or to engage in peer collaborations can lead to more meaningful and impactful professional growth (Edutopia, 2019).

The role of school administrators is crucial in facilitating an environment that supports teacher autonomy and professional development. Administrators who adopt a supportive and collaborative leadership style can significantly influence teachers' perceptions of autonomy and their engagement in professional development. Practical strategies include involving teachers in decision-making processes, providing opportunities for collaborative learning, and acknowledging teachers' expertise and contributions. Such practices not only empower teachers but also cultivate a positive school culture that is conducive to continuous improvement and innovation (Zakrzewski, 2012).

Recent developments in educational settings further illustrate the impact of administrative approaches on teacher autonomy and professional development. For example, a 2024 initiative in England proposed a nine-day fortnight and flexible working arrangements to address teacher workload and well-being. Educators expressed optimism about these changes, noting that reduced workload could improve job satisfaction and retention. However, concerns were raised about financial and logistical challenges, highlighting the need for careful planning and support from administrators to ensure successful implementation (The Guardian, 2024). Conversely, a case at Houston ISD's Wharton Dual Language Academy in 2024 demonstrated the adverse effects of a lack of administrative support for teacher autonomy. Parents criticized the school’s administration for creating a ‘toxic’ culture that led to the departure of valued teachers. The administration’s pressure on teachers to conform to district guidelines, which conflicted with the school’s International Baccalaureate framework, undermined teacher autonomy and negatively affected the school’s culture and educational quality (Houston Chronicle, 2024).

These examples underscore the critical role of administrators in both fostering or hindering teacher autonomy and professional development. Administrators who recognize the value of teacher autonomy and actively support personalized professional development contribute to a more motivated and effective teaching staff. This, in turn, leads to improved

student outcomes and a more positive school environment. Therefore, rethinking the role of school administrators to prioritize and facilitate teacher autonomy and professional development is essential for the advancement of educational practices and the well-being of both teachers and students.

THE CONCEPTUAL APPROACH

School Administrators

The concept of a school administrator encompasses a wide range of responsibilities that are essential for ensuring the smooth functioning of a school and the achievement of educational goals. A school administrator can be defined as an individual who is responsible for overseeing the day-to-day operations of a school, including academic, financial, and personnel management. According to Jones and Smith (2018), school administrators are tasked with providing leadership and strategic direction to the school community while ensuring that the institution's goals and objectives are met. The role of a school administrator is multidimensional, requiring the ability to balance administrative duties with educational leadership. School administrators are typically involved in curriculum development, staff management, student discipline, and resource allocation. They work closely with teachers, parents, students, and the broader community to create a positive and conducive learning environment. Brown et al. (2020) emphasized that effective school administrators foster a culture of collaboration and innovation, ensuring that teachers have the necessary resources and support to deliver quality instruction. Moreover, they play a key role in setting the vision and mission of the school and aligning the activities of the school with these strategic objectives.

Leadership is a central component of the school administrator's role. Effective school administrators demonstrate both transformational and instructional leadership qualities. Transformational leadership involves inspiring and motivating teachers and students to achieve high levels of performance, while instructional leadership focuses on improving teaching and learning processes (Lee & Harris, 2019). A successful school administrator must be able to balance these leadership styles to address the dynamic and complex nature of educational settings. According to Taylor (2021), school administrators who exhibit strong leadership skills are better able to navigate challenges such as changing educational policies, budget constraints, and shifting societal expectations.

The decision-making process is another critical aspect of a school administrator's role. Administrators are required to make decisions that affect the academic and social development of students, the professional growth of teachers, and the overall functioning of the school. Smith and Johnson (2017) argued that data-driven decision-making has become an essential practice for school administrators, as it enables them to identify areas of improvement and implement evidence-based strategies. School administrators can design targeted interventions to support struggling students and enhance overall academic achievement, by analyzing student performance data. Communication is also a fundamental responsibility of a school administrator. Effective communication with teachers, students, parents, and other stakeholders helps to build trust and promote a sense of community within the school. According to Martin and Kelly (2016), open and transparent communication fosters a positive school climate and encourages stakeholder engagement. School administrators are often required to mediate conflicts, address grievances, and ensure that all voices are heard in the decision-making process.

School administrators also play a vital role in managing the financial and human resources of a school. Budgeting, financial planning, and resource allocation are key functions that require careful attention and strategic thinking. Johnson (2015) noted that resource constraints and funding challenges have made the role of school administrators increasingly complex, as they must find innovative ways to maximize resources while maintaining high standards of education. In addition to financial management, school administrators are responsible for hiring, training, and evaluating teachers and staff. Effective human resource management ensures that the school has a qualified and motivated workforce capable of meeting the educational needs of students.

The role of a school administrator extends to ensuring compliance with educational policies and regulations. School administrators must stay informed about changes in national and local education policies and ensure that the school operates within the legal framework. According to Adams (2014), school administrators are accountable for maintaining standards of academic excellence and ensuring that the school meets accreditation and inspection requirements. They must also implement policies that promote diversity, equity, and inclusion within the school community.

In the context of technological advancement, school administrators are increasingly required to integrate technology into the educational process. Digital learning platforms, online assessments, and virtual classrooms have become integral components of modern education. According to Williams and Green (2022), school administrators who embrace technological innovation are better positioned to enhance student engagement and improve learning outcomes. They must also provide training and support to teachers to ensure that they can effectively use technology in their teaching practices.

TEACHER AUTONOMY

Teacher autonomy refers to the degree of independence and professional discretion that teachers have in making decisions about their instructional practices, classroom management, and the overall learning environment. It is widely regarded as a critical factor in enhancing teacher motivation, job satisfaction, and overall effectiveness in the classroom. According to Smith and Johnson (2015), teacher autonomy encompasses the ability of teachers to exercise control over curriculum design, teaching methods, assessment strategies, and student engagement techniques without excessive interference from external authorities. The concept of teacher autonomy is rooted in the broader framework of professional independence and the recognition of teachers as skilled professionals capable of making informed decisions that best meet the needs of their students. Teacher autonomy is often linked to improved teaching quality and student outcomes. Brown et al. (2018) asserted that when teachers have greater autonomy, they are more likely to experiment with innovative teaching strategies, adapt lessons to the specific needs of their students, and respond effectively to diverse learning styles. Autonomy allows teachers to exercise professional judgment in selecting instructional materials, designing lesson plans, and modifying teaching methods based on classroom dynamics. This level of flexibility fosters a more responsive and student-centered approach to education, which ultimately enhances learning outcomes.

However, the degree of teacher autonomy can vary significantly depending on institutional policies, educational frameworks, and cultural expectations. In some educational systems, teachers are granted considerable freedom to design and implement their instructional

strategies, while in others; they are required to adhere strictly to standardized curricula and assessment guidelines. According to Lee and Harris (2019), the tension between teacher autonomy and centralized educational control reflects a broader debate about the balance between maintaining consistent educational standards and allowing for localized adaptation and innovation. Teachers who are given the freedom to exercise professional judgment often report higher levels of job satisfaction and professional fulfillment, which in turn contributes to lower turnover rates and increased teacher retention (Taylor, 2020). According to Williams and Green (2022), teachers who have greater control over their instructional practices are more likely to engage in reflective teaching, seek out professional development opportunities, and collaborate with colleagues to improve their teaching effectiveness. This sense of professional ownership and responsibility empowers teachers to take initiative, implement creative solutions to classroom challenges, and adapt to changing educational demands. Moreover, teacher autonomy encourages teachers to align their instructional practices with their personal teaching philosophies and values, which enhances their sense of professional identity and purpose.

The impact of teacher autonomy on student engagement and motivation is also significant. Adams (2014) suggeste that when teachers have the freedom to design engaging and relevant learning experiences, students are more likely to develop a positive attitude toward learning and demonstrate higher levels of academic achievement. Teacher autonomy enables educators to tailor their instructional approaches to the interests and needs of their students, fostering a more dynamic and interactive classroom environment. Furthermore, teachers who feel empowered to make instructional decisions are better equipped to build positive relationships with students, address individual learning challenges, and create an inclusive and supportive learning environment. In an era of rapid technological advancement and shifting educational priorities, teachers need the flexibility to experiment with new teaching methods, incorporate digital tools, and respond to emerging challenges. According to Taylor (2021), teacher autonomy encourages a culture of continuous improvement and professional learning, where teachers are motivated to explore new ideas, reflect on their teaching practices, and share best practices with colleagues. This adaptability is essential for preparing students to thrive in a complex and rapidly changing world.

Teacher autonomy is a vital component of effective teaching and learning. It empowers teachers to make informed decisions about their instructional practices, adapt to the needs of their students, and engage in continuous professional growth. While excessive control and rigid standardization can undermine teacher autonomy, a balanced approach that combines professional independence with supportive guidelines and accountability measures is essential for ensuring educational quality and consistency. Educational institutions can harness the benefits of teacher autonomy to improve student outcomes and enhance the overall quality of education by fostering a culture of trust, respect, and professional collaboration.

THE NEED FOR TEACHER AUTONOMY

Teacher autonomy refers to the degree of independence and professional discretion that teachers exercise in their instructional practices, curriculum design, and decision-making processes within the classroom and school environment. The concept of teacher autonomy has gained increasing attention in educational research and policy discussions due to its significant impact on teacher motivation, job satisfaction, and student outcomes. Autonomy allows teachers to tailor their teaching methods to the specific needs of their students, thereby enhancing learning experiences

and improving academic performance (Ingersoll & Collins, 2018). Teachers operate in complex and dynamic environments where they are required to adapt to the diverse learning needs of their students while meeting the demands of educational policies and standards. When teachers are granted autonomy, they are better positioned to respond creatively and effectively to these challenges. Research has shown that teachers who have greater control over their instructional decisions are more likely to demonstrate higher levels of job satisfaction and professional commitment (Frostenson, 2015). This, in turn, reduces burnout and turnover rates, thereby contributing to the stability and consistency of the educational system (Vangrieken et al., 2017).

Teacher autonomy also fosters a sense of ownership and accountability among educators. When teachers have the freedom to select teaching materials, design lesson plans, and adopt instructional strategies that align with their professional judgment and expertise, they are more likely to engage deeply with their work and take responsibility for student learning outcomes (Buchanan, 2015). Autonomy also encourages professional growth, as teachers are more inclined to reflect on their practice, experiment with new approaches, and engage in continuous learning when they have the latitude to make instructional decisions (Skaalvik & Skaalvik, 2014). Despite the clear benefits of teacher autonomy, many educational systems remain highly centralized, with strict guidelines and standardized curricula that limit teachers' discretion. This top-down approach often undermines teachers' professional judgment and reduces their motivation to innovate and adapt to their students' unique learning needs (Datnow & Park, 2018). The lack of autonomy can lead to frustration and a sense of disempowerment among teachers, which ultimately affects the quality of teaching and student engagement. Canrinus et al. (2012) opined that teachers who perceive a lack of control over their work environment are more likely to experience stress and lower levels of motivation, which negatively impacts their teaching effectiveness.

Furthermore, teacher autonomy is closely linked to the broader goal of fostering critical thinking and creativity among students. When teachers are empowered to design and implement instructional methods that promote active learning and critical inquiry, students are more likely to develop the skills necessary for success in a rapidly changing world (Levine & Zimmerman, 2020). Autonomous teachers can create learning environments that encourage student participation, curiosity, and problem-solving, which are essential for the development of independent and adaptable learners. The need for teacher autonomy also extends to the broader context of educational reform and policy-making. Policymakers and school administrators must recognize that empowering teachers is not merely a matter of professional courtesy but a strategic necessity for improving educational outcomes. Providing teachers with greater autonomy requires a shift in mindset from control and compliance to trust and collaboration. This involves creating supportive structures that allow teachers to exercise professional judgment while ensuring that they have access to the resources and training needed to succeed (Tschannen-Moran & Hoy, 2018). Empowering teachers with the freedom to make instructional decisions fosters motivation, job satisfaction, and professional commitment while enhancing student learning outcomes. Educational policies and practices should prioritize teacher autonomy as a means of cultivating a more adaptive, innovative, and effective teaching workforce. Educational systems can create a more dynamic and engaging learning environment for all students by granting teachers the trust and flexibility they need to excel.

PROFESSIONAL DEVELOPMENT

The professional development of teachers refers to the continuous process of improving teachers' knowledge, skills, and competencies to enhance their effectiveness in the classroom and contribute to overall educational improvement. Professional development is essential for ensuring that teachers remain up to date with the latest pedagogical practices, technological advancements, and changes in curriculum and educational policy. According to Smith and Johnson (2015), professional development involves structured activities such as workshops, seminars, peer collaboration, mentoring, and reflective practices designed to improve teaching effectiveness and student outcomes. It plays a crucial role in empowering teachers to adapt to the evolving demands of the educational landscape and address the diverse needs of their students effectively. Professional development enhances teachers' instructional strategies, classroom management techniques, and understanding of student learning processes. Taylor (2020) argued that teachers who engage in continuous professional learning are better equipped to implement innovative teaching methods and respond to the unique challenges of their classrooms. This process involves both formal and informal learning opportunities, including attending professional conferences, participating in teacher networks, engaging in action research, and collaborating with colleagues. Professional development fosters a culture of continuous improvement, where teachers are encouraged to reflect on their practices, identify areas for growth, and implement new strategies to enhance student learning.

The professional development of teachers is closely linked to improving student achievement. According to Brown et al. (2018) schools with comprehensive professional development programs tend to have higher levels of student engagement, improved academic performance, and reduced achievement gaps. Teachers who receive targeted training in instructional strategies, differentiated instruction, and assessment techniques are more likely to design lessons that cater to diverse learning styles and address individual student needs. Williams and Green (2022) posited that professional development enables teachers to use data-driven approaches to monitor student progress and adjust their teaching methods accordingly, leading to more effective learning outcomes. Collaboration and peer learning are important components of professional development. Teachers benefit from opportunities to share best practices, discuss challenges, and develop collective solutions through professional learning communities (PLCs) and team-based initiatives. Lee and Harris (2019) emphasized that professional development that includes collaborative learning fosters a sense of shared responsibility for student success and promotes a supportive teaching environment. Peer coaching and mentoring programs provide teachers with valuable feedback and guidance from experienced colleagues, helping them refine their teaching methods and build confidence in their professional abilities.

Technology has become a significant driver of professional development in recent years. The integration of digital tools and online learning platforms has expanded access to professional development opportunities and created new ways for teachers to enhance their skills. According to Taylor (2021), online professional development programs allow teachers to participate in webinars, virtual workshops, and online courses, enabling them to learn at their own pace and apply new knowledge in real-time. Additionally, the use of technology in the classroom requires teachers to develop new competencies in digital literacy, online assessment, and virtual classroom management, making professional development essential for staying current with technological advancements. The role of school leadership in supporting professional development is critical. Administrators play a key role in creating a school culture that values

and prioritizes professional learning. Martin and Kelly (2016) argued that school leaders who allocate resources, provide time for professional development activities, and encourage teachers to experiment with new teaching methods contribute to a more dynamic and innovative educational environment. Effective professional development programs are aligned with school improvement goals and tailored to the specific needs of the teaching staff, ensuring that professional learning is relevant and impactful.

Evaluation and feedback are essential for measuring the impact of professional development on teaching and learning. Brown et al. (2018) emphasized that professional development programs should include mechanisms for assessing teacher progress, gathering feedback from participants, and making adjustments based on the outcomes. Continuous evaluation helps to identify successful strategies, address areas of weakness, and ensure that professional development remains responsive to the evolving needs of teachers and students. The professional development of teachers is a vital component of educational improvement. It empowers teachers to enhance their instructional practices, adapt to changing educational demands, and improve student learning outcomes. Effective professional development programs are characterized by ongoing learning, collaboration, technological integration, and strong support from school leadership. Despite the challenges associated with implementing professional development initiatives, a strategic and well-supported approach can foster a culture of continuous improvement and professional excellence in the teaching profession.

THE IMPORTANCE OF ONGOING PROFESSIONAL DEVELOPMENT FOR TEACHERS

Ongoing professional development for teachers is essential for maintaining and improving the quality of education. In an ever-evolving educational landscape, teachers are expected to adapt to new teaching methods, technologies, and student needs. Professional development refers to the continuous process of improving teachers' skills, knowledge, and effectiveness through formal and informal learning opportunities such as workshops, conferences, peer collaborations, and reflective practice. Research has consistently shown that teachers who engage in ongoing professional development are better equipped to handle classroom challenges, implement innovative teaching strategies, and enhance student learning outcomes (Desimone & Garet, 2015). Education systems are increasingly complex, requiring teachers to address diverse learning styles, incorporate technology into instruction, and respond to evolving curriculum standards. Professional development provides teachers with the tools and strategies needed to meet these demands. For instance, teachers who receive training on differentiated instruction are more capable of addressing the varied learning needs of their students, leading to improved academic performance and student engagement (Tomlinson, 2014). Furthermore, ongoing training in technology integration helps teachers create more interactive and engaging learning environments, which can increase student motivation and participation (Koehler & Mishra, 2013).

Teacher professional development also plays a crucial role in fostering reflective practice and professional growth. When teachers engage in reflective practice, they assess their instructional methods, identify areas for improvement, and adapt their strategies to enhance student learning (Schön, 2017). Professional development opportunities that encourage reflection, such as peer observation and coaching, enable teachers to learn from one another and build a supportive professional community (Loughran, 2016). This process of self-evaluation and

peer feedback contributes to a culture of continuous improvement within schools. Moreover, ongoing professional development enhances teacher confidence and job satisfaction. When teachers feel well-prepared and supported, they are more likely to experience higher levels of motivation and professional fulfillment (Skaalvik & Skaalvik, 2014). This sense of competence and confidence reduces burnout and turnover rates, leading to greater stability within schools and improved student-teacher relationships (Day & Gu, 2010). Professional development also empowers teachers to take on leadership roles within their schools, further strengthening the overall educational environment (York-Barr & Duke, 2004).

The importance of professional development extends beyond individual teacher growth to the broader goal of educational reform. Education systems that prioritize teacher development are more likely to experience improved student outcomes and greater equity in learning opportunities (Wei et al., 2010). Professional development programs that focus on culturally responsive teaching, for example, help teachers create more inclusive learning environments where all students feel valued and supported (Gay, 2018). Similarly, training in formative assessment practices enables teachers to provide timely and targeted feedback to students, which enhances learning and performance (Wiliam, 2011). Collaborative professional development, where teachers work together to solve instructional challenges and share best practices, has been shown to be particularly effective. Schools with strong professional learning communities experience higher levels of teacher satisfaction and student achievement (Vescio et al., 2008). Collaborative learning opportunities encourage teachers to experiment with new approaches, reflect on their effectiveness, and adjust their teaching strategies based on student outcomes (Stoll et al., 2012). It is worthy to note that teachers who engage in continuous learning are better equipped to respond to the changing demands of the classroom, adopt innovative teaching strategies, and foster inclusive and engaging learning environments. To maximize the impact of professional development, educational leaders must prioritize the creation of supportive structures that enable teachers to participate in meaningful and collaborative learning experiences. Investing in teacher development is ultimately an investment in the future of education.

CURRENT CHALLENGES OF PROFESSIONAL DEVELOPMENT MODELS

Professional development models play a crucial role in enhancing the knowledge, skills, and competencies of teachers, thereby improving student learning outcomes and overall school performance. Despite the recognized importance of professional development, many existing models face significant challenges that limit their effectiveness and sustainability. Professional development models encompass a wide range of approaches, including workshops, coaching, peer collaboration, and online learning. However, the effectiveness of these models is often undermined by structural, logistical, and pedagogical issues that prevent teachers from fully engaging with and benefiting from professional development opportunities (Darling-Hammond et al., 2017).

One of the major challenges facing professional development models is the lack of sustained and continuous learning opportunities. Many professional development programs are designed as one-off workshops or short-term training sessions, which provide limited opportunities for teachers to internalize new knowledge and translate it into effective classroom practices (Desimone, 2011). Research has shown that professional development is more effective when it is sustained over time, allowing teachers to reflect, receive feedback, and refine their

instructional strategies (Garet et al., 2010). However, the short-term nature of many programs prevents deep learning and limits the long-term impact on teaching quality and student performance.

Another significant challenge is the misalignment between professional development content and teachers' actual classroom needs. Many professional development programs are designed at the policy level without adequate input from teachers, leading to a disconnect between the training provided and the realities of classroom teaching (Avalos, 2011). Teachers often report that professional development sessions focus on abstract theories or generic teaching methods rather than practical strategies that address specific challenges in their classrooms (Kennedy, 2016). This misalignment reduces the relevance and applicability of professional development, leading to low levels of engagement and implementation.

The issue of teacher autonomy and professional agency also presents a challenge to existing professional development models. When professional development is imposed in a top-down manner without considering teachers' professional judgment and expertise, it can lead to resistance and disengagement (Biesta et al., 2015). Teachers are more likely to engage with professional development when they have a sense of ownership and influence over the content and delivery methods. However, many models fail to provide teachers with the flexibility and autonomy to adapt professional development to their unique teaching contexts, thereby limiting its effectiveness.

Time constraints and workload pressures further hinder the success of professional development models. Teachers often struggle to balance the demands of their teaching responsibilities with the need to participate in professional development activities (Borko, 2016). In many cases, professional development sessions are scheduled outside of regular working hours or during school breaks, which can lead to fatigue and reduced motivation to engage meaningfully with the content. Moreover, inadequate planning and scheduling can disrupt the continuity of professional learning and prevent teachers from applying new strategies consistently in their classrooms (Louws et al., 2017).

The availability of resources and funding also poses a significant challenge to the implementation of effective professional development models. High-quality professional development requires investment in skilled facilitators, training materials, and ongoing support structures. However, many schools and educational systems operate under tight budgets, which restricts their ability to provide comprehensive and sustained professional development opportunities (Darling-Hammond et al., 2017). In resource-constrained settings, professional development is often reduced to minimal, low-cost training sessions that lack depth and follow-up, thereby limiting their long-term impact on teacher practice and student learning.

The shift toward online and virtual professional development models presents both opportunities and challenges. While online platforms offer greater flexibility and accessibility, they also require reliable internet access, technological infrastructure, and digital literacy skills (Trust et al., 2016). Teachers in low-resource settings may face difficulties accessing and engaging with online professional development due to limited technological infrastructure and inadequate training on how to use digital tools effectively. Furthermore, online professional development often lacks the interactive and collaborative components that are critical for deep professional learning (Hew & Cheung, 2013). Professional development models also face challenges related to measuring and evaluating their impact. Many professional development programs lack clear metrics for assessing their effectiveness in improving teaching practices and student outcomes (Guskey, 2014). Without systematic evaluation and feedback mechanisms, it

becomes difficult to determine which models are effective and which need improvement. Additionally, the focus on short-term outcomes rather than long-term changes in teacher practice further complicates the assessment of professional development impact.

Cultural and contextual factors add another layer of complexity to professional development models. Educational systems operate within distinct social, political, and cultural contexts that influence teachers' perceptions of professional development and their willingness to engage with it (Avalos, 2011). Professional development models that fail to consider these contextual factors may encounter resistance and low participation rates. For example, models imported from different educational systems may not align with local teaching practices, student needs, or policy frameworks, thereby limiting their relevance and effectiveness. The lack of sustained learning opportunities, misalignment with classroom realities, limited teacher autonomy, time constraints, inadequate resources, technological barriers, and weak evaluation mechanisms all contribute to the underperformance of professional development models. To address these challenges, policymakers and educational leaders must adopt a more teacher-centered approach, providing sustained, context-specific, and collaborative professional development opportunities. Educational systems can enhance the overall impact and effectiveness of teacher learning by aligning professional development with teachers' real-world challenges and creating supportive structures for implementation and reflection.

STRATEGIES FOR ADMINISTRATORS TO SUPPORT TEACHER PROFESSIONAL DEVELOPMENT

Teacher professional development is a crucial factor in improving the quality of education and enhancing student outcomes. Effective professional development enables teachers to refine their instructional strategies, integrate new technologies, and address the diverse learning needs of their students. However, the success of professional development largely depends on the support provided by school administrators. Administrators play a pivotal role in creating an environment where professional growth is encouraged, valued, and effectively implemented. Research has shown that strong administrative support is a key factor in sustaining professional development initiatives and translating them into improved classroom practices (Darling-Hammond et al., 2017). To foster effective professional development, administrators must adopt strategic approaches that address the structural, logistical, and motivational barriers that often hinder teacher learning. These strategies should be considered and adopted:

Establish Professional Learning Communities (PLCs)

Establishing professional learning communities (PLCs) is an effective strategy for administrators to support teacher professional development. PLCs provide a collaborative environment where teachers engage in continuous learning, share best practices, and reflect on instructional strategies to enhance student achievement (DuFour & Eaker, 2016). Administrators enable teachers to develop new pedagogical skills and stay updated with emerging educational trends by fostering a culture of collaboration. PLCs promote teacher engagement through collective inquiry and data-driven decision-making, ensuring instructional methods align with student needs (Vescio, Ross, & Adams, 2018). Regular meetings, peer observations, and constructive feedback create a structured system that strengthens teachers' professional growth. Administrators play a crucial role in providing resources, time, and training to sustain PLCs

effectively (Linder, Post, & Calabrese, 2017). Technology integration within PLCs enhances accessibility to online courses, webinars, and research-based instructional materials, further enriching professional development opportunities (Trust, Krutka, & Carpenter, 2016). Schools that implement PLCs experience improved teacher retention, instructional quality, and student learning outcomes.

Implement Instructional Coaching

Implementing instructional coaching is a strategic approach for administrators to support teacher professional development. Instructional coaching provides teachers with personalized, job-embedded support that enhances their instructional skills and fosters continuous growth (Knight, 2018). Through one-on-one mentoring, coaches help teachers refine their pedagogical techniques, integrate research-based strategies, and address classroom challenges effectively. Instructional coaching promotes reflective teaching by encouraging educators to analyze their practices and adapt to diverse student needs (Kraft, Blazar, & Hogan, 2018). Coaches provide constructive feedback, model effective teaching strategies, and facilitate professional learning that aligns with school goals. This ongoing support leads to improved teacher confidence, instructional quality, and student learning outcomes. Administrators play a critical role in the success of instructional coaching by allocating resources, scheduling coaching sessions, and fostering a culture of collaboration (Gallucci, Van Lare, Yoon, & Boatright, 2019). Technology-enhanced coaching, such as virtual coaching and video-based reflection, further expands opportunities for professional development (Mangin & Dunsmore, 2020). Schools that implement instructional coaching witness higher teacher retention and overall instructional effectiveness, making it a vital strategy for sustained professional growth.

Offer Flexible Professional Development Opportunities

Offering flexible professional development opportunities is a key strategy for administrators to support teacher professional development. Flexibility in professional learning allows teachers to engage in growth activities at their own pace, accommodating their diverse schedules and learning preferences (Kennedy, 2016). Administrators ensure that teachers have access to continuous learning without disrupting their instructional responsibilities by integrating online workshops, asynchronous courses, and micro-credentialing programs. Flexible professional development enhances teacher engagement by allowing them to select topics relevant to their instructional needs and career aspirations (Desimone & Garet, 2015). Personalized learning plans, peer collaboration networks, and self-paced modules contribute to a more meaningful professional growth experience. Furthermore, administrators can support teachers through virtual mentoring and on-demand training sessions that address real-time challenges in the classroom (Darling-Hammond et al., 2017). Technology plays a crucial role in providing flexible learning options, as digital platforms facilitate interactive and collaborative professional development (Trust et al., 2016). Schools that adopt flexible professional development models witness improved teacher retention, instructional quality, and student learning outcomes, reinforcing the need for adaptable learning frameworks.

Encourage Teacher Leadership

Encouraging teacher leadership is a vital strategy for administrators to support teacher professional development. Administrators create a culture of shared responsibility, collaboration, and continuous improvement by empowering teachers to take on leadership roles (Wenner & Campbell, 2017). Teacher leaders serve as mentors, instructional coaches, and facilitators of professional learning communities, helping their peers refine pedagogical strategies and implement best practices. Providing opportunities for teachers to lead workshops, conduct peer observations, and contribute to curriculum development enhances their professional growth and strengthens overall instructional quality (York-Barr & Duke, 2016). Administrators can support teacher leadership by recognizing and valuing teachers' expertise, offering leadership training, and creating platforms for shared decision-making (Lumpkin, Claxton, & Wilson, 2019). These initiatives build teachers' confidence, motivation, and commitment to lifelong learning. Encouraging teacher leadership also fosters innovation, as teachers are more likely to experiment with new instructional techniques when they have autonomy and institutional support (Katzenmeyer & Moller, 2018). Schools that implement teacher leadership programs report improved teacher retention, student outcomes, and a stronger professional community, making it a key component of sustainable professional development.

Recognize and Celebrate Achievements

Recognizing and celebrating achievements is a powerful strategy for administrators to support teacher professional development. When teachers receive acknowledgment for their hard work and accomplishments, it enhances their motivation, job satisfaction, and commitment to continuous learning (Guskey, 2016). Administrators who implement recognition programs create a positive school culture where teachers feel valued and inspired to improve their instructional practices. Recognition can take various forms, such as awards, public appreciation, career advancement opportunities, and peer acknowledgment (Donaldson, 2020). Celebrating achievements reinforces best practices, encourages professional collaboration, and strengthens teachers' sense of purpose. Administrators promote a culture of excellence that benefits both educators and students by highlighting exemplary instructional strategies and innovative teaching methods (Sims & Fletcher-Wood, 2018). Celebrating professional growth also fosters a supportive learning environment where teachers feel encouraged to experiment with new techniques and share their expertise with colleagues (Kraft & Papay, 2016). Schools that prioritize teacher recognition experience higher retention rates, improved instructional quality, and enhanced student outcomes, making it an essential component of professional development.

Provide Social and Emotional Support

Providing social and emotional support is a critical strategy for administrators to support teacher professional development. Teachers who feel emotionally supported are more likely to engage in professional growth opportunities, remain motivated, and contribute positively to the school environment (Brackett & Cipriano, 2020). Administrators can offer social and emotional support through wellness programs, counseling services, and creating a safe space for open communication. Emotional support fosters resilience, reduces stress, and helps teachers manage the demands of the profession (Jennings & Greenberg, 2019). Administrators help teachers

maintain their well-being, which is essential for effective instructional delivery by promoting work-life balance and encouraging self-care (Schonert-Reichl, 2017). Providing opportunities for peer support, mentorship, and collaboration further strengthens teachers' sense of community and belonging (Collie, 2021). Schools that prioritize social and emotional well-being often observe improved teacher retention, job satisfaction, and instructional quality (Oberle & Schonert-Reichl, 2016). Investing in teachers' social and emotional health not only supports their professional development but also positively impacts student learning outcomes and overall school success.

CONCLUSION

Rethinking the role of school administrators in fostering teacher autonomy and professional development is essential for improving educational outcomes and creating a more dynamic learning environment. School administrators play a pivotal role in balancing the need for consistency and accountability with the professional independence of teachers. Empowering teachers with greater autonomy in instructional decision-making enhances their motivation, creativity, and job satisfaction, ultimately leading to improved student engagement and academic performance. When teachers have the freedom to adapt their teaching methods to the unique needs of their students, they are more likely to implement innovative strategies and create a more responsive learning environment. At the same time, professional development ensures that teachers have the necessary skills, knowledge, and support to exercise their autonomy effectively. Administrators who prioritize professional development create a culture of continuous learning, where teachers are encouraged to reflect on their practices, seek out new approaches, and collaborate with colleagues to address instructional challenges. Effective professional development programs are characterized by relevance, ongoing support, and opportunities for peer collaboration. School leaders must ensure that professional learning is integrated into the broader goals of the institution and aligned with teachers' needs. Administrators can strengthen the connection between teacher autonomy and professional development by fostering a supportive environment where teachers feel trusted and valued. This approach not only enhances teacher effectiveness but also promotes a more engaged and successful student body. Ultimately, rethinking the role of school administrators in supporting teacher autonomy and professional growth is key to building a more resilient and innovative educational system.

Suggestions

School administrators can play a crucial role in fostering teacher autonomy and professional development by adopting a more supportive and strategic approach:

- Administrators should create a culture of trust and empowerment by giving teachers greater control over instructional decisions and classroom management. Allowing teachers to adapt teaching methods and curricula based on student needs encourages creativity and responsiveness, ultimately improving learning outcomes.
- Professional development should be teacher-driven, with administrators actively seeking input from teachers to design programs that address their specific needs and challenges. This ensures that professional learning opportunities are relevant, practical, and aligned with teachers' professional goals.

- Administrators should provide structured opportunities for peer collaboration and mentoring. Encouraging teachers to work together, share best practices, and engage in reflective dialogue helps build a sense of collective responsibility and enhances the overall quality of instruction.
- School leaders should integrate professional development into the regular work schedule, ensuring that teachers have adequate time and resources to engage in meaningful learning without feeling overburdened. This may involve adjusting teaching loads, providing release time, and offering financial support for professional learning activities.
- Administrators should adopt a balanced approach to accountability, combining professional autonomy with clear performance expectations and constructive feedback. Rather than imposing rigid guidelines, school leaders should engage teachers in goal-setting and decision-making processes, ensuring that accountability measures are fair and supportive.

ABSTRACT

Shared administrative responsibilities play a crucial role in enhancing teachers' job satisfaction, motivation, and overall student achievement. In educational institutions, administrative duties are often centralized, leading to excessive workload and stress among teachers. However, a more collaborative approach, where responsibilities are distributed among educators, fosters a sense of ownership, engagement, and professional fulfillment. This study examines the impact of shared administrative responsibilities on teachers' motivation and how it translates into improved student performance. The study holds that when teachers participate in decision-making, policy implementation, and school administration, they feel valued and empowered. This empowerment leads to higher job satisfaction, reducing burnout and increasing commitment to teaching. Moreover, a motivated teaching workforce enhances instructional quality, ultimately benefiting students' academic outcomes. The study also explored the challenges associated with shared responsibilities, such as role conflict and the need for effective leadership structures. However, with proper delegation, training, and support, the benefits outweigh the drawbacks. Findings suggested that schools that embrace participatory administration experience a more positive work environment, improved teacher retention, and better student performance. Therefore, educational stakeholders should consider implementing policies that encourage shared leadership to create a more productive and effective learning environment. This study contributes to the ongoing discourse on educational leadership and its role in improving school outcomes.

Keywords: Shared Administrative Responsibilities, Panacea, Teachers' Job Satisfaction, Motivation, Students' Achievement.

INTRODUCTION

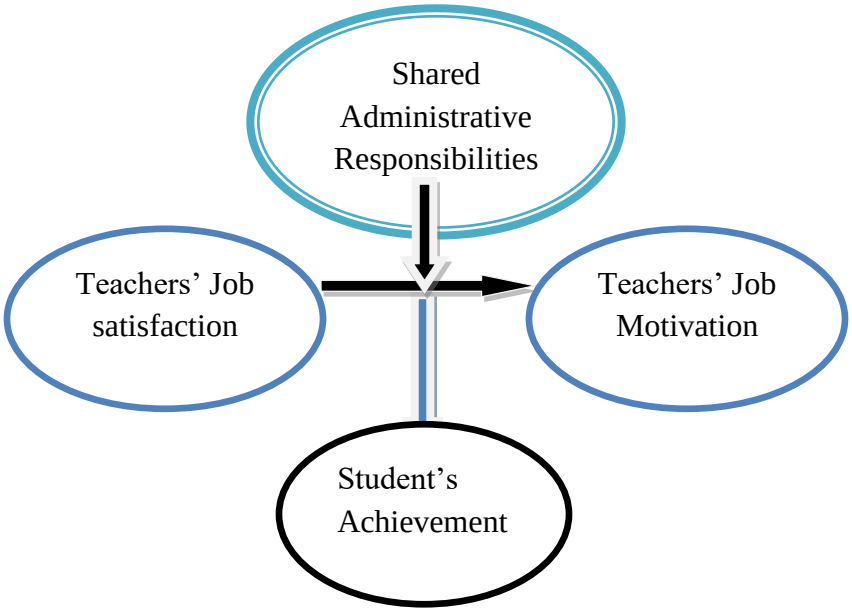
The concept of shared administrative responsibilities has gained significant attention as a viable solution to addressing challenges faced by teachers in educational institutions. As schools continue to evolve, the increasing administrative burden placed on teachers has been linked to job dissatisfaction, decreased motivation, and declining student achievement. Effective

distribution of administrative duties among school leaders, teachers, and support staff has been proposed as a strategy to create a more balanced workload, thereby fostering a positive work environment that enhances productivity and performance. Teachers who are relieved of excessive administrative duties are more likely to focus on their core instructional roles, leading to improved job satisfaction and a heightened sense of motivation. This, in turn, positively impacts student achievement by ensuring that educators can dedicate their time and energy to teaching and mentoring students effectively (Anderson & Parker, 2019).

A well-structured administrative framework that incorporates shared responsibilities promotes collaboration and teamwork within the school system. Williams et al., (2021) asserted that when teachers are actively involved in decision-making processes and administrative functions, they develop a sense of ownership and professional fulfillment. This participatory approach not only increases their motivation but also strengthens their commitment to the institution's goals. Shared administrative responsibilities contribute to a sense of community and collective responsibility among educators. When administrative tasks such as record-keeping, curriculum development, student discipline, and parent-teacher communication are distributed equitably, teachers feel valued and supported. This balanced workload fosters a healthier work environment, reducing stress levels and improving overall morale. Teachers who experience reduced stress and greater job satisfaction are more likely to remain in the profession, thus addressing the issue of teacher attrition. Retaining experienced educators is crucial for maintaining continuity in instructional quality and fostering long-term student achievement (Garcia & Thompson, 2023).

Additionally, the impact of shared administrative responsibilities extends beyond teacher satisfaction to overall school effectiveness. When administrative tasks are distributed equitably, school leaders can focus on strategic planning, policy implementation, and curriculum development while teachers remain dedicated to fostering academic excellence. Nguyen & Patel, (2020) posited that a well-coordinated administrative structure fosters a supportive learning environment that enhances student engagement and achievement. Schools that implement collaborative leadership models experience improved teacher morale, reduced workload-related stress, and higher retention rates. Ultimately, an educational system that prioritizes the well-being and professional growth of teachers contributes to long-term student success and institutional progress.

The need for shared administrative responsibilities is further emphasized by the increasing complexity of modern education systems. The rapid advancements in technology, evolving curriculum requirements, and growing student diversity require educators to manage multiple roles simultaneously. Without adequate administrative support, teachers may struggle to balance their instructional duties with non-teaching responsibilities, leading to job dissatisfaction and reduced motivation. Distributing administrative tasks among multiple stakeholders ensures that teachers can focus on their primary mission of delivering quality education. Furthermore, schools that embrace collaborative leadership approaches benefit from increased efficiency, better resource allocation, and improved communication between educators and administrators (Roberts & Kim, 2021).



The effects of shared administrative responsibilities on student achievement cannot be overstated. When teachers are relieved of excessive administrative burdens, they can dedicate more time to lesson planning, individualized instruction, and student mentorship. This focused attention translates into higher academic performance, improved classroom engagement, and better student outcomes. Additionally, students benefit from a stable and motivated teaching

workforce, as teacher satisfaction is directly linked to the overall quality of education. Schools that prioritize teacher well-being create an environment where students feel supported, inspired, and encouraged to excel academically (Martinez et al., 2018).

Another significant benefit of shared administrative responsibilities is the promotion of innovation in teaching and learning. When teachers have a say in administrative decisions, they are more likely to introduce creative solutions that improve classroom instruction and student engagement. Schools that adopt collaborative decision-making practices encourage a culture of experimentation and knowledge-sharing, leading to enhanced teaching methodologies and improved academic performance. Moreover, fostering a democratic work environment where teachers' voices are heard strengthens their commitment to institutional success, reinforcing a positive feedback loop that benefits both educators and students (Collins & Morgan, 2023).

Thus, shared administrative responsibilities serve as a panacea for addressing teacher job satisfaction, motivation, and student achievement. Educational institutions can create a more sustainable and effective learning environment by redistributing non-teaching tasks and fostering a collaborative school culture. Teachers who feel valued and supported are more likely to remain engaged in their profession, leading to improved instructional quality and positive student outcomes. Implementing shared administrative responsibilities is not merely a managerial strategy but a fundamental shift toward inclusive and effective school governance. Prioritizing teacher well-being through collaborative leadership ultimately enhances the entire educational system, ensuring long-term success for both educators and students.

CONCEPTUAL UNDERPINNING

Concept of shared administrative responsibilities for teachers' job satisfaction, motivation and student's achievement

Shared Administrative Responsibilities

Shared administrative responsibilities in a school system involve the distribution of managerial, operational, and decision-making duties among various stakeholders, including school administrators, teachers, support staff, students, and community members. This approach enhances collaboration, improves efficiency, and fosters a sense of collective ownership in educational institutions. The traditional top-down model of school administration, where a single principal or a small group of administrators make all critical decisions, is increasingly being replaced by a more participatory approach. Schools can leverage diverse expertise, increase accountability, and improve overall institutional effectiveness by decentralizing decision-making (Bush, 2013).

The implementation of shared administrative responsibilities often involves various levels of participation, ranging from leadership teams to teacher-led committees and student councils. When decision-making is shared, teachers and staff feel more valued and engaged in the school's direction. This participatory leadership model fosters a culture of mutual respect and collaboration, creating a positive work environment and enhancing job satisfaction (Harris, 2014). Studies have shown that teachers who are involved in decision-making processes exhibit higher motivation and commitment to their work, leading to improved instructional quality and student outcomes (Leithwood & Azah, 2017).

One of the most significant advantages of shared administrative responsibilities is the enhancement of school governance. Collaborative decision-making ensures that various perspectives are considered, reducing the likelihood of biased or uninformed policies. School boards, parent-teacher associations, and advisory committees contribute valuable insights that help in shaping policies that reflect the needs of the school community. Additionally, distributed leadership enhances transparency and trust, as all stakeholders are kept informed about school policies, financial decisions, and curriculum changes (Spillane, 2015). Workload distribution is another critical aspect of shared administrative responsibilities. Principals and school administrators often face an overwhelming array of responsibilities, ranging from budget management to student discipline. School leaders can focus on strategic planning and instructional leadership rather than being bogged down by routine managerial tasks by sharing responsibilities with assistant principals, department heads, and administrative staff. Effective delegation allows for better time management, reducing stress and preventing burnout among school leaders (Fullan, 2016).

However, shared administrative responsibilities require a clear structure to be effective. Without well-defined roles and responsibilities, conflicts and inefficiencies may arise. Schools must establish clear guidelines and protocols to ensure smooth coordination among different stakeholders. A robust communication system is also essential to prevent misunderstandings and duplication of efforts. Professional development programs should also be implemented to equip educators and staff with the skills necessary for leadership and administrative tasks (Robinson, 2019). Furthermore, engaging parents in decision-making processes ensures that their concerns and expectations are adequately addressed. Parent-teacher organizations, school advisory boards, and volunteer programs enable parents to contribute to school management actively. Schools that foster strong parent-school partnerships report higher student achievement levels, better school climate, and increased community support (Epstein, 2015).

Despite the numerous benefits, implementing shared administrative responsibilities comes with challenges. One of the primary obstacles is resistance to change. School

administrators accustomed to traditional hierarchical structures may be hesitant to relinquish control. Similarly, teachers and staff who are not used to participatory decision-making may initially find it difficult to take on additional responsibilities. Overcoming these challenges requires a cultural shift, emphasizing collaboration, professional trust, and the development of leadership skills at all levels (Lumby, 2017). Shared administration requires effective conflict resolution mechanisms. Differences in opinions among stakeholders can lead to disagreements, which, if not managed properly, may hinder school operations. Establishing clear conflict resolution strategies and promoting open dialogue can help mitigate these issues. Schools should adopt a problem-solving approach that encourages constructive discussions and consensus-building (Hallinger & Heck, 2019).

Technology also plays a crucial role in facilitating shared administrative responsibilities. Digital platforms and school management systems streamline communication, task delegation, and performance tracking. Tools such as collaborative planning software, virtual meeting platforms, and data analytics help administrators, teachers, and parents work together efficiently. Schools can enhance transparency, improve decision-making, and foster a more cohesive administrative structure by leveraging technology (Selwyn, 2021). The effectiveness of shared administrative responsibilities is evident in schools that have successfully adopted distributed leadership models. Case studies show that schools with collaborative administration structures experience better staff retention, improved student performance, and higher levels of community engagement. Countries such as Finland and Canada have implemented participatory leadership models in their education systems, resulting in enhanced school governance and better learning outcomes (Sahlberg, 2016).

Teachers' Job Satisfaction

Teachers' job satisfaction in a school system is a crucial factor influencing the effectiveness of education, student performance, and the overall well-being of educators. It encompasses various elements such as working conditions, professional development opportunities, school leadership, workload, salary, and interpersonal relationships within the school environment. A high level of job satisfaction among teachers contributes to increased motivation, commitment, and retention, whereas dissatisfaction often results in burnout, absenteeism, and high turnover rates (Dinham & Scott, 2013). Understanding the determinants of job satisfaction is essential for creating supportive environments that enhance teacher performance and student learning outcomes.

The school climate which includes aspects such as collegial relationships, administrative support, and student behavior is one of the primary determinants of teachers' job satisfaction. A positive school climate fosters collaboration, respect, and professional growth, leading to higher job satisfaction. Skaalvik & Skaalvik, (2018) suggested that teachers who experience supportive relationships with colleagues and administrators are more likely to remain in the profession and exhibit a strong sense of belonging. Conversely, a toxic work environment characterized by conflicts, lack of support, and disruptive student behavior can lead to stress and job dissatisfaction. Workload and administrative responsibilities significantly impact teachers' satisfaction levels. Excessive workload, including lesson planning, grading, extracurricular activities, and administrative tasks, often leads to stress and exhaustion. Studies carried out by Collie et al. (2012) indicated that teachers who perceive their workload as manageable report higher job satisfaction and better mental well-being. Schools that implement effective workload management strategies, such as providing teaching assistants and reducing non-teaching duties,

tend to have more satisfied teachers. Balancing workload ensures that educators can focus on instructional quality and student engagement without feeling overwhelmed.

Compensation and job security also play a vital role in determining teachers' job satisfaction. Competitive salaries, timely promotions, and job stability contribute to a sense of financial security and career fulfillment. Teachers who feel adequately compensated for their efforts are more likely to exhibit high morale and commitment to their profession (Ingersoll, Merrill, & Stuckey, 2014). However, low wages and a lack of career advancement opportunities often lead to frustration and attrition. Policymakers and school administrators must recognize the importance of fair compensation in retaining skilled educators and maintaining a motivated workforce. In addition, professional development opportunities are essential for enhancing teachers' job satisfaction. Continuous learning, skill enhancement programs, and career growth initiatives contribute to a sense of professional achievement. Desimone and Garet (2015) opined that teachers who engage in regular training and workshops feel more confident and effective in their roles, leading to increased job satisfaction. Moreover, mentorship programs and peer collaborations provide educators with the necessary support and guidance to navigate challenges in the teaching profession. Investing in professional development not only benefits teachers but also improves student learning experiences and educational outcomes.

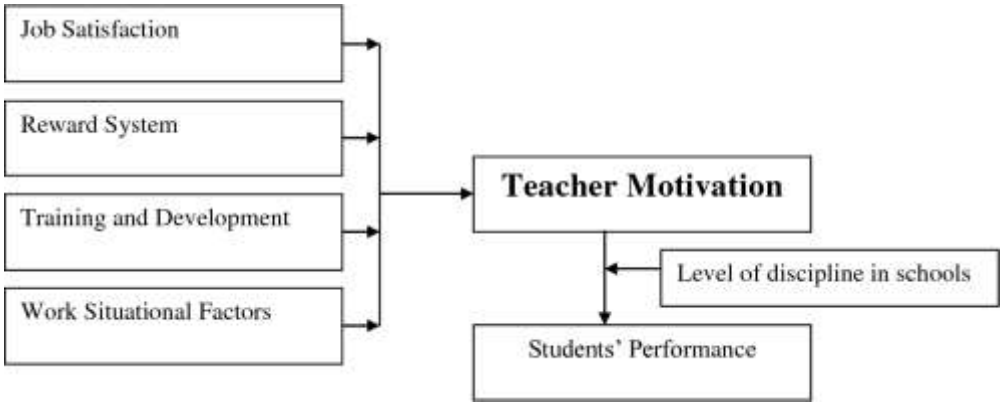
School leadership and administration have a significant impact on teachers' job satisfaction. Effective leadership that values teachers' input, provides constructive feedback, and fosters a culture of respect and trust enhances job satisfaction. Principals and school administrators who exhibit supportive leadership styles, such as transformational and participatory leadership, create an environment where teachers feel valued and motivated (Leithwood et al., 2017). Conversely, autocratic or unsupportive leadership can lead to frustration, demotivation, and increased teacher turnover. Establishing strong leadership practices that prioritize teacher well-being is essential for maintaining a positive school culture. Student behavior and classroom management also influence teachers' job satisfaction. Educators who face frequent disciplinary challenges, disruptive behavior, and lack of parental support often experience stress and job dissatisfaction. Implementing effective classroom management strategies, promoting positive student-teacher relationships, and involving parents in disciplinary matters contribute to a more conducive learning environment (Marzano et al., 2015). Schools that provide behavioral support programs and counseling services help teachers manage student-related challenges more effectively, leading to greater job satisfaction.

Work-life balance is another crucial factor affecting teachers' job satisfaction. The teaching profession often demands long hours, including evenings and weekends, for lesson planning, grading, and extracurricular activities. A lack of work-life balance can lead to burnout, affecting both professional performance and personal well-being. Bakker and Demerouti (2017) suggested that schools that promote flexible schedules, mental health support, and workload adjustments contribute to higher levels of job satisfaction among teachers. Encouraging a healthy balance between professional responsibilities and personal life enhances overall teacher well-being and retention rates. Teachers' job satisfaction is also influenced by broader educational policies and societal perceptions of the teaching profession. Countries that prioritize education, invest in teacher training, and uphold the dignity of the profession tend to have higher levels of teacher satisfaction. Conversely, societies where teachers face low social status, inadequate resources, and frequent policy changes experience higher rates of teacher dissatisfaction (OECD, 2019).

Effects of Teachers' Job Dissatisfaction

Teachers' job dissatisfaction has significant consequences for both the educators themselves and the broader educational system. When teachers experience dissatisfaction in their work, it often results in decreased motivation and engagement, which negatively affects the quality of education delivered to students. A lack of enthusiasm and commitment from teachers can lead to reduced student performance, as the learning environment becomes less stimulating and supportive. Job dissatisfaction among teachers contributes to high turnover rates, which disrupts the continuity of instruction and places additional strain on educational institutions to recruit and train new staff (Smith et al., 2018). Inadequate compensation and benefits are primary causes of job dissatisfaction among teachers. Many educators feel that their salaries do not reflect the demands and responsibilities of their roles, leading to frustration and financial stress. This issue is particularly prominent in underfunded schools, where resources are limited and teachers are expected to manage large class sizes with minimal support. Excessive workload and administrative responsibilities also contribute to dissatisfaction, as teachers find themselves overwhelmed with tasks beyond their core instructional duties (Johnson & Turner, 2021).

A lack of professional growth opportunities also fuels job dissatisfaction among teachers. When educators do not have access to continuous training, mentorship, and career advancement pathways, they may feel stagnant in their roles. The absence of professional development can lead to a decline in job satisfaction, as teachers struggle to stay motivated and innovative in their teaching practices. Moreover, workplace culture plays a crucial role in determining job satisfaction. Supportive leadership, collaborative work environments, and positive relationships with colleagues contribute to job fulfillment, while toxic workplace dynamics and lack of recognition can erode morale (Garcia & Lopez, 2020). It is noteworthy that chronic stress, burnout, and feelings of underappreciating can lead to mental health issues such as anxiety and depression. Prolonged dissatisfaction may also result in physical health problems, including fatigue and weakened immune function. As a result, absenteeism rates may increase, further affecting students' learning experiences and placing additional pressure on remaining staff members (Anderson, 2017).



Teachers who experience job dissatisfaction often become less effective in their roles, which can directly affect student outcomes. A disengaged teacher may struggle to maintain classroom discipline, create engaging lesson plans, or provide meaningful feedback to students. Over time, this decline in teaching quality can contribute to lower student achievement levels, reducing overall educational standards. Students who do not receive the guidance and instruction they need may struggle with academic performance, leading to higher dropout rates and reduced future career prospects (Nguyen et al., 2019). Another major consequence of teacher dissatisfaction is the disruption caused by frequent staff turnover. High attrition rates among teachers create instability in schools, requiring constant recruitment and training of new staff. This cycle of hiring and losing teachers can be costly and time-consuming for educational institutions, diverting resources away from instructional improvements. Furthermore, students suffer when they must frequently adapt to new teachers, leading to inconsistencies in learning and difficulty in establishing strong teacher-student relationships. Williams and Carter (2022) opined that students benefit from long-term relationships with their educators, as continuity in teaching helps foster trust, stability, and effective learning environments.

The negative effects of teacher dissatisfaction are also evident in school culture and morale. When a significant portion of the teaching staff is unhappy with their working

conditions, it can create a toxic workplace environment. Dissatisfied teachers may withdraw from collaboration with colleagues, become resistant to new teaching methods, or express frustration in ways that affect their students. This negativity can spread throughout a school, affecting overall morale and decreasing motivation among other staff members. Conversely, a positive school culture that values teacher satisfaction and well-being can lead to a more cohesive and effective educational environment (Harrison & Lewis, 2020). Financial constraints also play a role in teacher dissatisfaction, particularly in schools with limited funding. Teachers in under-resourced schools often face challenges such as outdated materials, inadequate classroom supplies, and a lack of technological support. These obstacles make it difficult for educators to perform their duties effectively and can contribute to feelings of frustration and helplessness. Additionally, the disparity between schools with ample funding and those with fewer resources can lead to inequities in education, where students in low-income areas receive lower-quality instruction due to teacher dissatisfaction and burnout (Martinez et al., 2018).

One possible solution to addressing teacher dissatisfaction is implementing policies that improve working conditions and job satisfaction. Offering competitive salaries, reducing unnecessary administrative tasks, and providing meaningful professional development opportunities can help retain teachers and enhance their effectiveness. Additionally, fostering a positive school culture where teachers feel valued and supported can contribute to higher job satisfaction levels. Schools that prioritize teacher well-being are more likely to maintain a stable and motivated teaching workforce, which ultimately benefits students (Roberts & Kim, 2021). The effects of teacher dissatisfaction extend beyond individual educators and impact the entire educational system. A dissatisfied teaching workforce can lead to systemic issues, including decreased student achievement, financial strain on schools, and challenges in maintaining a qualified teaching staff. Ensuring that teachers feel valued and supported is essential for creating a successful and sustainable educational environment (Thompson & Hall, 2024).

Teachers' job motivation

Nyakundi, T. K. (2013).

Teachers' job motivation in a Nigerian school system is a critical factor influencing the quality of education, teacher performance, and student outcomes. Motivation determines the level of commitment, enthusiasm, and perseverance teachers exhibit in their professional duties. Several factors impact teachers' motivation, including salary, working conditions, career advancement opportunities, school leadership, recognition, job security, and the socio-cultural environment.

Understanding these factors and implementing policies to enhance motivation is essential for improving the Nigerian education system and addressing the persistent challenges of teacher attrition, low productivity, and declining student performance (Ololube, 2013).

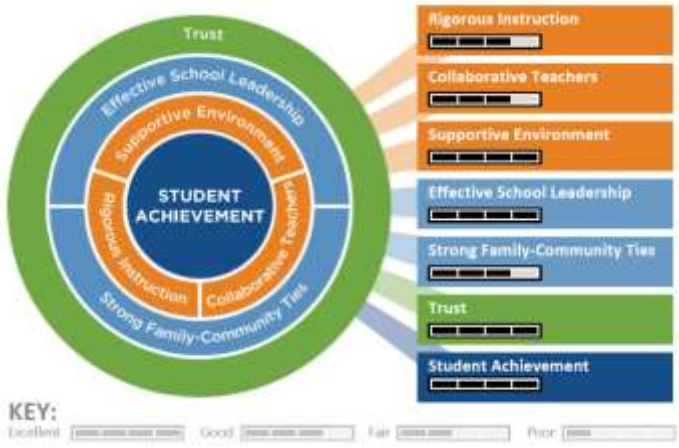
Financial remuneration is one of the primary determinants of teachers' motivation in Nigeria. Low salaries have been a persistent issue in the education sector, leading to widespread dissatisfaction among teachers. Many educators struggle to meet their financial obligations, which affect their job commitment and productivity. Adeyemi and Oladipo (2019) held that fair and competitive salaries play a crucial role in boosting teachers' morale and reducing turnover rates. However, the irregular payment of salaries, delays in promotions and lack of financial incentives contribute to teacher demotivation in many Nigerian schools.

The working environment is another significant factor affecting teachers' motivation. Many Nigerian schools, particularly in rural areas, suffer from inadequate infrastructure, insufficient teaching materials, and overcrowded classrooms. Poor working conditions make it difficult for teachers to effectively perform their duties, leading to frustration and decreased job satisfaction. Studies have shown that teachers who work in well-equipped and conducive environments demonstrate higher levels of motivation and engagement (Bennell & Akyeampong, 2012). Providing necessary resources, improving classroom conditions, and ensuring adequate facilities can significantly enhance teacher motivation in Nigerian schools.

Opportunities for career growth and professional development also influence teachers' motivation. In Nigeria, limited access to training programs, workshops, and higher education opportunities restricts teachers' ability to enhance their skills and advance in their careers. Professional development not only improves teaching effectiveness but also increases job satisfaction and motivation. Teachers who receive regular training and have clear career progression paths are more likely to remain committed to their profession (Okeke & Mtyuda, 2017). Implementing structured training programs and creating opportunities for career advancement can significantly improve teachers' motivation in Nigerian schools.

School leadership and administrative support play a crucial role in shaping teachers' motivation. Principals and school administrators who exhibit strong leadership, provide guidance, and recognize teachers' efforts create a positive work environment that fosters motivation. In contrast, authoritarian leadership, lack of recognition, and poor communication between teachers and school administrators contribute to job dissatisfaction and decreased motivation. Olayiwola (2020) maintained that participatory leadership and inclusive decision-making processes enhance teachers' sense of belonging and commitment to their work Encouraging supportive leadership practices in Nigerian schools can improve teacher morale and job satisfaction.

Recognition and rewards are essential components of teacher motivation. Teachers who feel valued and appreciated for their hard work and contributions are more likely to remain dedicated to their profession. However, many teachers feel underappreciated, with limited recognition from school authorities, parents, and the government. Implementing recognition programs, such as teacher awards, public appreciation events, and performance-based incentives, can boost motivation and reinforce a culture of excellence in schools (Uche & Enwere, 2021).



Job security and stability significantly impact teachers' motivation in the Nigerian school system. Many teachers, particularly those in the private sector, face job insecurity due to contractual employment, lack of pension benefits, and the risk of sudden job termination. This uncertainty creates anxiety and reduces commitment to teaching. Ensuring job security through policies that guarantee permanent employment, pension schemes, and protection against arbitrary

dismissal can enhance motivation and attract more qualified individuals to the teaching profession (Adebayo & Yusuf, 2018).

The socio-cultural perception of teaching as a profession affects teachers' motivation. Teaching is often regarded as a low-status profession, with many teachers experiencing social and professional undervaluation. This perception discourages young graduates from pursuing teaching careers and demotivates those already in the profession. Elevating the status of teaching through advocacy, improved remuneration, and professional development opportunities can enhance motivation and attract more competent individuals to the profession (Eze, 2016).

Work-life balance is another important factor influencing teachers' motivation. Many teachers face excessive workloads, long working hours, and additional responsibilities beyond their teaching duties in schools. These challenges contribute to stress, burnout, and reduced motivation. Schools that implement workload management strategies, provide mental health support, and promote a balance between work and personal life report higher levels of teacher motivation and job satisfaction (Bakker & Demerouti, 2017). Government policies and education reforms also play a significant role in shaping teachers' motivation in Nigeria. Policies that prioritize teacher welfare, provide adequate funding for education, and ensure fair treatment of educators contribute to a motivated teaching workforce. However, frequent policy changes, lack of implementation, and bureaucratic inefficiencies often undermine teachers' confidence in the system. Ensuring consistency in educational policies, involving teachers in decision-making processes, and addressing systemic issues can enhance motivation and commitment among educators (Akinbote, 2015).

Student's Achievement

Quintero E. (2015). Trust: The Foundation of Student Achievement

Various factors influence student achievement, including teacher quality, school infrastructure, parental involvement, curriculum relevance, socioeconomic status, government policies, and student motivation. Understanding these factors and implementing strategies to enhance student performance is crucial for improving educational outcomes in Nigeria (Adewale, 2013). Teacher quality is a significant determinant of student achievement in Nigeria. Well-trained, motivated, and experienced teachers contribute positively to students' academic performance. Ogunyemi & Adebayo (2018) posited that students taught by qualified and competent teachers perform better in standardized tests compared to those taught by under qualified teachers. However, challenges such as inadequate teacher training, lack of professional development opportunities, and poor

remuneration affect the quality of teaching in Nigerian schools. Strengthening teacher education programs, offering continuous training, and improving teachers' welfare can enhance instructional effectiveness and, consequently, student achievement.

The availability and quality of school infrastructure play a vital role in student achievement. Many Nigerian schools, especially in rural areas, lack basic facilities such as classrooms, libraries, laboratories, and ICT resources. Research has shown that students in well-equipped schools tend to perform better academically than those in poorly resourced schools (Eze & Okonkwo, 2017). Providing modern learning facilities, improving school maintenance, and ensuring access to instructional materials can significantly enhance student achievement in Nigeria. Parental involvement is another crucial factor affecting student achievement. Studies have demonstrated that students with supportive parents who engage in their academic activities tend to excel academically (Adeyemi & Salami, 2015). However, in many Nigerian households, particularly those with low socioeconomic status, parents struggle to provide adequate support due to financial constraints, low educational background, or limited time. Encouraging parental participation through school-community partnerships, awareness programs, and home-school communication can improve students' academic performance.

The relevance and quality of the curriculum significantly influence student achievement. An outdated or overloaded curriculum can hinder students' ability to grasp essential concepts and skills. In Nigeria, the curriculum is often criticized for being too theoretical and disconnected from real-life applications (Olawale & Yusuf, 2019). Reforming the curriculum to align with global educational standards, incorporating practical learning experiences, and integrating technology into teaching can enhance student engagement and achievement. Socioeconomic factors also play a crucial role in student achievement. Poverty, malnutrition, and inadequate access to educational resources negatively impact students' learning outcomes. Many Nigerian students from low-income families face challenges such as hunger, lack of school materials, and inability to afford extra lessons, all of which affect their academic performance (Okon & James, 2020). Addressing these issues through school feeding programs, scholarships, and free educational resources can help bridge the achievement gap and improve learning outcomes for disadvantaged students.

Government policies and education reforms are essential for improving student achievement in Nigeria. Policies that prioritize quality education, allocate sufficient funding, and ensure proper implementation of educational programs contribute to better student performance. However, frequent policy changes, poor execution, and corruption in the education sector have hindered progress (Akinbami, 2016). Ensuring policy consistency, monitoring implementation, and increasing investment in education can create an environment conducive to student success. Student motivation and self-discipline are also important determinants of academic achievement. Highly motivated students tend to exhibit better study habits, higher levels of engagement, and greater persistence in overcoming academic challenges. Research has shown that students who receive encouragement from teachers, parents, and peers are more likely to perform well academically (Bamidele & Ojo, 2021). Implementing mentorship programs, providing motivational incentives, and fostering a culture of academic excellence can enhance student motivation and achievement in Nigerian schools.

Assessment methods and examination standards influence student achievement in Nigeria. The reliance on high-stakes examinations, such as the West African Senior School Certificate Examination (WASSCE) and the Unified Tertiary Matriculation Examination (UTME), places significant pressure on students. While standardized testing is important for

measuring academic performance, excessive focus on rote memorization rather than critical thinking skills can hinder holistic learning (Chinedu & Adekunle, 2018). Adopting diverse assessment methods that emphasize problem-solving, creativity, and analytical skills can improve student learning outcomes.

Teacher-student relationships and classroom management also affect student achievement. A positive learning environment where students feel safe, respected, and valued enhances academic engagement and performance. Teachers who employ inclusive teaching strategies, provide constructive feedback, and establish strong rapport with students contribute to better learning outcomes (Omotayo & Falade, 2022). Schools should promote student-centered teaching approaches and create a supportive classroom atmosphere to enhance student achievement.

HOW DO SHARED ADMINISTRATIVE RESPONSIBILITIES IMPROVE TEACHERS' JOB SATISFACTION, MOTIVATION AND STUDENT'S ACHIEVEMENT?

Shared administrative responsibilities in the Nigerian school system play a crucial role in improving teachers' job satisfaction, motivation, and student achievement. The concept involves the delegation of administrative tasks among school stakeholders, including teachers, principals, and other staff members, to ensure efficient school management and enhanced educational outcomes. When administrative responsibilities are distributed effectively, teachers experience a greater sense of belonging, job autonomy, and professional growth, all of which contribute to increased motivation and job satisfaction. The impact of shared administration on student achievement is significant, as it fosters a well-organized learning environment where students receive better instruction, guidance, and support (Adebayo & Yusuf, 2018).

Teachers' job satisfaction is influenced by various factors, including workload, work environment, recognition, and decision-making participation. Shared administrative responsibilities help reduce the administrative burden on teachers, allowing them to focus more on their instructional duties. When teachers are actively involved in school decision-making processes, they develop a sense of ownership and commitment to their work, leading to higher job satisfaction. Ogunyemi & Adebisi (2020) maintained that teachers who participate in school administration feel more valued and respected, which positively impacts their morale and overall job satisfaction. Also, distributing administrative roles helps prevent burnout, as teachers are not overwhelmed with excessive tasks beyond their primary instructional duties.

Motivation is a critical factor influencing teachers' performance and commitment to their profession. Shared administrative responsibilities create a collaborative school culture that fosters motivation by empowering teachers to take initiative and contribute to school development. When teachers are given leadership roles, such as heading committees or coordinating extracurricular activities, they feel a greater sense of purpose and professional fulfillment. Studies have indicated that schools that implement shared governance experience higher levels of teacher motivation, as educators perceive their roles as meaningful and impactful (Akinbote, 2017). Shared administration promotes teamwork and peer support, which enhance job motivation by creating a positive and cooperative work environment. Teachers who feel supported by their colleagues and administrators are more likely to remain committed to their duties and perform at optimal levels.

Student achievement is closely linked to the effectiveness of school administration and teacher performance. A well-structured administrative system that encourages teacher

participation leads to better student outcomes. When teachers are motivated and satisfied with their jobs, they put more effort into lesson planning, classroom management, and student engagement, all of which contribute to improved academic performance. Schools with participatory administrative structures have higher student achievement rates compared to those with centralized administrative models (Eze & Okonkwo, 2019). It is also true that when teachers are involved in decision-making processes, they can contribute valuable insights into curriculum design, teaching strategies, and student support programs, ensuring that students receive quality education tailored to their needs.

Another way shared administrative responsibilities enhance student achievement is by improving teacher-student relationships. Teachers who feel supported and valued are more likely to engage positively with their students, providing mentorship, guidance, and encouragement. A positive teacher-student relationship fosters a conducive learning environment where students feel motivated to learn and perform well academically. Omotayo & Falade (2022) asserted that students perform better in schools where teachers exhibit high levels of job satisfaction and motivation, as these factors directly influence teaching effectiveness and classroom engagement. When teachers collaborate in administrative tasks, they can implement student-centered policies that address learning challenges, promote inclusive education, and enhance overall academic achievement.

School leadership and governance play a significant role in the successful implementation of shared administrative responsibilities. Principals and school administrators who adopt participatory leadership styles create an environment where teachers feel valued and empowered. Democratic leadership in schools leads to better teacher morale, increased motivation, and improved student achievement (Uche & Enwere, 2021). School leaders foster a culture of trust, collaboration, and shared responsibility, which ultimately benefits the entire school community, by involving teachers in administrative decision-making. Effective delegation of administrative tasks ensures that teachers have the necessary support to excel in their instructional roles while also contributing to the overall management of the school.

Professional development and capacity building are additional benefits of shared administrative responsibilities. When teachers are given administrative roles, they develop leadership and managerial skills that enhance their professional growth. Participating in school administration exposes teachers to various aspects of educational management, such as budgeting, policy implementation, and conflict resolution. These experiences contribute to their career advancement and job satisfaction, as they acquire new skills and knowledge that improve their effectiveness as educators (Bamidele & Ojo, 2021). Schools that encourage teacher involvement in administration also create opportunities for mentorship and peer learning, further enhancing professional development and motivation.

Shared administrative responsibilities also contribute to a more efficient and organized school system. When teachers collaborate with school administrators, tasks such as curriculum planning, student assessment, and school improvement initiatives are executed more effectively. A well-coordinated administrative structure ensures that schools operate smoothly, reducing conflicts and inefficiencies that may hinder student learning. Schools with decentralized administrative systems perform better in terms of resource management, policy implementation, and overall academic success (Chinedu & Adekunle, 2018). Schools can maximize their human resources and create an environment that supports both teacher and student success by distributing responsibilities among qualified staff members.

The impact of shared administrative responsibilities extends beyond individual teachers and students to the broader educational system. When schools implement participatory administration, they contribute to a culture of accountability and transparency in the education sector. Teachers who are actively involved in school governance are more likely to advocate for policies that improve educational quality and student welfare. Additionally, shared administration fosters a sense of community among school stakeholders, including parents, students, and government agencies, leading to a more holistic approach to education. Ibrahim & Adepoju, (2017) posited that schools with strong community engagement experience higher levels of student achievement and teacher job satisfaction. Encouraging collaboration among all stakeholders ensures that schools operate effectively and meet the diverse needs of students.

Shared administrative responsibilities significantly enhance teachers' job satisfaction, motivation, and student achievement in the Nigerian school system. Schools create a more inclusive, efficient, and collaborative environment that supports educational success by distributing administrative tasks among teachers and school leaders. Teachers who participate in school administration experience higher levels of job satisfaction and motivation, which translates into better teaching performance and improved student outcomes. Encouraging shared governance in Nigerian schools requires strategic leadership, professional development opportunities, and a commitment to fostering a positive school culture. Investing in participatory administration will not only benefit teachers and students but also contribute to the overall improvement of the Nigerian education system.

ARGUMENTS AND AUTHORS' POSITION ON SHARED ADMINISTRATIVE RESPONSIBILITIES AND TEACHERS' JOB SATISFACTION, MOTIVATION AND STUDENT'S ACHIEVEMENT

Shared administrative responsibilities in the Nigerian school system have been widely regarded as a mechanism for improving teachers' job satisfaction, motivation, and student achievement. The concept emphasizes the distribution of administrative tasks among school stakeholders, including teachers, school heads, and support staff, to foster collaboration and efficiency in school management. Advocates argue that when teachers are actively involved in administrative duties, they develop a sense of ownership, professional growth, and increased motivation. However, some critics contend that shared administrative responsibilities may lead to work overload, conflict of interest, and reduced instructional time, thereby negating its intended benefits.

Proponents of shared administrative responsibilities argue that teacher participation in school administration fosters job satisfaction. When teachers contribute to decision-making processes, they feel valued and acknowledged, which enhances their morale and commitment to their duties. Studies indicate that job satisfaction among teachers improves when they are given leadership roles and responsibilities beyond the classroom (Adebayo & Yusuf, 2018). Teachers who engage in administrative functions such as curriculum planning, disciplinary committees, and policy formulation develop a deeper sense of belonging and purpose within the school environment. Moreover, participatory administration ensures that teachers' perspectives are considered in decision-making, leading to policies and initiatives that better align with classroom realities (Ogunyemi & Adebisi, 2020).

Another argument in favor of shared administrative responsibilities is that it enhances teacher motivation. Teachers who are empowered with leadership opportunities tend to be more

committed to their roles, as they perceive their contributions as valuable to school development. Motivation among teachers increases when they are given responsibilities that allow them to showcase their expertise and leadership skills (Akinbote, 2017). Additionally, a collaborative work environment fosters peer support and teamwork, which further enhances motivation. Schools that implement shared administration tend to experience reduced teacher attrition rates, as educators find fulfillment in their expanded roles and responsibilities (Bamidele & Ojo, 2021). Motivation also stems from professional development opportunities that arise from participating in school administration, as teachers acquire new skills in leadership, conflict resolution, and strategic planning (Chinedu & Adekunle, 2018).

Student achievement is another significant benefit linked to shared administrative responsibilities. A well-structured system that encourages teacher involvement in administration often results in improved student performance. Teachers who are satisfied and motivated are more likely to engage effectively in lesson planning, student mentorship, and classroom management, all of which contribute to better academic outcomes (Eze & Okonkwo, 2019). Additionally, schools with decentralized administrative structures experience better policy implementation and resource management, leading to enhanced learning experiences for students. Research has shown that when teachers actively participate in decision-making, they contribute innovative teaching strategies that align with student needs, thereby fostering academic excellence (Omotayo & Falade, 2022).

Despite these advantages, critics argue that shared administrative responsibilities can lead to work overload for teachers. Many educators already face demanding teaching schedules, and adding administrative duties may result in burnout and stress. Increased responsibilities can divert teachers' focus from instructional duties, leading to decreased classroom effectiveness. Studies have shown that teachers who are burdened with excessive administrative tasks experience fatigue, which negatively impacts their teaching performance and overall job satisfaction (Uche & Enwere, 2021). The risk of overburdening teachers raises concerns about the sustainability of shared administration, particularly in schools with limited staff and resources.

Another counterargument is that shared administrative responsibilities may lead to conflicts among staff members. When teachers are assigned administrative roles, disagreements may arise over decision-making authority, workload distribution, and policy implementation. Power struggles and lack of clear role definitions can create tension among school staff, undermining the intended benefits of shared administration (Olawale & Yusuf, 2019). Additionally, not all teachers possess the skills or interest in administrative tasks, making it challenging to ensure effective participation. Some educators may feel coerced into taking on administrative responsibilities, which could lead to resentment and decreased morale.

Furthermore, critics argue that shared administrative responsibilities can negatively impact student achievement if not properly managed. The additional workload placed on teachers may reduce the time and energy they dedicate to lesson preparation and student engagement. Effective teaching requires focus and consistency, which may be compromised when teachers are stretched thin by administrative duties (Ibrahim & Adepoju, 2017). Also, poorly implemented shared administration structures may lead to inefficiencies, where administrative tasks are not adequately managed, resulting in disorganized school operations that hinder student learning outcomes (Chinedu & Adekunle, 2018).

The debate over shared administrative responsibilities highlights both its potential benefits and challenges. While it fosters teacher satisfaction, motivation, and student

achievement, its effectiveness depends on proper implementation. Schools that adopt shared governance must establish clear role definitions, provide adequate training, and ensure that administrative duties are equitably distributed to prevent overload and conflicts. Leadership styles also play a crucial role in determining the success of participatory administration. School administrators who adopt a democratic leadership approach tend to create a more inclusive and supportive environment, which maximizes the benefits of shared responsibilities (Uche & Enwere, 2021).

Shared administrative responsibilities offer a promising approach to improving teachers' job satisfaction, motivation, and student achievement in the Nigerian school system. However, its implementation must be carefully managed to avoid potential drawbacks such as work overload, conflicts, and reduced instructional effectiveness. Schools that successfully integrate shared administration with proper support systems, role clarity, and professional development opportunities can harness its full benefits, creating a more dynamic and efficient educational environment.

CONCLUSION

The adoption of shared administrative responsibilities in educational institutions has emerged as a viable solution for enhancing teachers' job satisfaction, motivation, and student achievement. Schools can create a more inclusive and participatory environment that fosters professional fulfillment, reduces burnout, and ultimately improves educational outcomes, by distributing leadership roles among teachers and other stakeholders. When teachers are actively involved in decision-making and administrative functions, they develop a greater sense of ownership and commitment to their work. This participatory approach not only alleviates the excessive workload often placed on school administrators but also empowers teachers, allowing them to contribute meaningfully to school management and policy implementation.

Teachers' job satisfaction is a crucial factor in determining their effectiveness in the classroom. When administrative responsibilities are shared, teachers experience a sense of recognition and professional growth, leading to increased motivation. A motivated teaching workforce is more likely to engage students, implement innovative teaching strategies, and foster a positive learning environment. Satisfied teachers are less likely to leave the profession, thereby improving teacher retention rates and ensuring continuity in student learning experiences. High teacher turnover has been linked to decreased student performance, as frequent changes in instructors disrupt learning processes. Schools can create stability within their teaching staff, ultimately benefiting students academically by promoting a shared leadership model.

The positive impact of shared administrative responsibilities extends beyond teacher satisfaction and motivation to student achievement. A well-supported and engaged teaching workforce contributes to improved instructional quality, which directly influences student learning outcomes. Schools that implement shared leadership structures tend to have better organizational efficiency, improved communication, and enhanced collaboration among staff members. This, in turn, creates a more effective learning environment where students receive high-quality education and holistic support. Moreover, when teachers work collaboratively in administrative functions, they can tailor school policies and curricular decisions to better meet the needs of students, ensuring a more student-centered approach to education.

Despite the numerous advantages, implementing shared administrative responsibilities requires careful planning, clear role definitions, and effective communication. Schools must

establish structures that facilitate collaboration while preventing role conflicts and ensuring accountability. Training and professional development programs can further equip teachers with the necessary skills to handle administrative responsibilities effectively. Policymakers and school leaders should recognize the long-term benefits of this approach and promote policies that support participatory leadership models. When properly executed, shared administrative responsibilities serve as a transformative strategy that enhances teacher well-being, sustains motivation, and significantly improves student achievement, making it a vital component of modern educational leadership.

Suggestions

The following suggestions are put forward:

- Schools should establish a participatory leadership model where teachers actively engage in decision-making processes related to curriculum development, school policies, and resource management. When teachers have a voice in administrative matters, they feel valued and motivated, leading to higher job satisfaction and improved teaching effectiveness.
- It is essential to ensure that administrative responsibilities are equitably distributed among teachers based on their expertise, experience, and interests. Assigning roles that align with individual strengths fosters a sense of purpose and enhances efficiency, preventing burnout and reducing administrative overload on school leaders.
- Teachers should receive ongoing training in leadership, management, and administrative tasks to equip them with the skills necessary for handling shared responsibilities effectively. Workshops, mentorship programs, and leadership training can empower teachers, boosting their confidence and motivation while ensuring smooth administrative operations.
- Schools should implement well-defined structures outlining each teacher's administrative responsibilities to avoid confusion and role conflicts. Setting clear expectations and accountability mechanisms ensures that shared tasks are executed efficiently while maintaining transparency and collaboration among staff members.
- School leaders or administrators should create an environment where collaboration and teamwork are encouraged can significantly enhance job satisfaction. Regular staff meetings, open communication channels, and peer support systems enable teachers to share ideas, address challenges, and feel a sense of community, ultimately improving student learning experiences.
- Acknowledging teachers' efforts in administrative roles through incentives, promotions, or public recognition can boost morale and motivation. When teachers feel appreciated for their contributions beyond the classroom, they are more likely to remain engaged and committed to both their professional growth and student success.

CLASSROOM DISCIPLINE AND STUDENT BEHAVIOUR MANAGEMENT IN PUBLIC SENIOR SECONDARY SCHOOLS IN RIVERS EAST SENATORIAL DISTRICT

Chioma Nkeiruka IFEJIKA
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

The study examined the relationship between classroom discipline and student behaviour management in public senior secondary schools in Rivers East Senatorial District. The study is guided by three research questions and three hypotheses. A correlational research design was adopted for the study. From a population of 1,836 teachers in Public Senior Secondary Schools in Rivers East Senatorial District, a sample size of 184 (10%) was selected using the simple random sampling technique. The instrument for data collection was a questionnaire titled "Classroom Discipline and Student Behaviour Management Questionnaire (CDSBMQ)," which was developed by the researcher and utilized a four-point Likert scale ranging from Very High Extent to Very Low Extent. The instrument was validated and yielded a reliability index of 0.84 using Cronbach Alpha to determine the coefficient. Research questions were analyzed using mean and standard deviation, while the hypotheses were tested using Pearson Product Moment Correlation Coefficient (PPMCC) at a 0.05 level of significance with the aid of Statistical Package for the Social Sciences (SPSS) version 26.0. The findings revealed that instructional time management, setting standing orders, and punishment and reinforcement systems, are crucial in promoting better student behaviour management. The study concluded that effective classroom discipline strategies positively influence student behaviour management in public senior secondary schools in Rivers East Senatorial District. Based on the findings, it was recommended among others that schools should provide teachers with training and resources on effective instructional time management techniques, such as lesson planning, pacing, and transitions, to help them maximize instructional time and minimize disruptions.

Keywords: Classroom, Discipline, Student Behaviour Management.

INTRODUCTION

Classroom environments encompass diverse student behaviours ranging from positive engagement to disruptive conduct. These behaviours manifest through various social, emotional, and cognitive factors necessitating effective management strategies centred within the classroom context. Classroom discipline refers to educators' systematic approaches to establish order, promote positive conduct, and minimise disruptive behaviours. This analysis examines three key

strategies for classroom discipline: instructional time management, setting standing orders, and punishment and reinforcement systems. Effective classroom discipline creates conducive learning environments wherein students develop self-regulation skills while teachers maximize instructional delivery. According to Ikegbusi and Manafa (2023), well-structured discipline policies significantly correlate with positive teacher-student relationships and improved student behaviour in secondary schools. The implementation of appropriate classroom management techniques remains fundamental to educational success and student development.

Student behaviour represents complex responses to environmental stimuli, personal development stages, and social interactions. Behaviours manifest across a spectrum from highly engaged participation to severely disruptive actions. Positive behaviours include active participation, task completion, cooperation with peers, and adherence to classroom norms. Conversely, negative behaviours encompass tardiness, inattention, verbal disruptions, and defiance. Multiple factors influence student behaviour within educational settings. Social factors involve peer relationships, family dynamics, and cultural backgrounds that shape behavioural patterns. Emotional factors include self-regulation abilities, emotional intelligence, and psychological well-being. Cognitive factors encompass learning styles, academic preparedness, and intellectual engagement levels. Sunday et al. (2022) emphasized that a comprehensive understanding of these influences enables educators to implement targeted management strategies addressing behaviour challenges.

However, in the context of this study, classroom disciplines are categorized into instructional time management, setting standing orders, and publishment and reinforcement. Effective instructional time management represents a fundamental discipline strategy wherein teachers maximize learning opportunities through efficient lesson planning, seamless transitions, and engaging instructional delivery. This approach minimizes opportunities for disruptive behaviour through strategic pacing and activity variation. Ossai (2023) noted significant correlations between teachers' classroom time management practices and student academic performance in Nigerian secondary schools.

Standing orders constitute predetermined rules, procedures, and expectations established for classroom operations. These orders create structured environments wherein students understand behavioural expectations and consequences for violations. Standing orders typically address movement procedures, communication protocols, materials management, and conduct expectations during varied instructional activities. Lamidi et al. (2024) added that setting standing orders involves the collaborative development of expectations, visual displays of rules, consistent enforcement, and regular review.

Punishment and reinforcement systems involve consequences implemented following student behaviour to decrease undesirable actions and increase positive conduct. Effective punishment remains proportional, immediately follows infractions, and focuses on redirection rather than retribution. Reinforcement includes positive acknowledgement, token systems, privileges, and verbal praise reinforcing desired behaviours. Ebimiere et al. (2020) asserted that successful implementation requires consistency, fairness, and emphasis on positive reinforcement over punitive measures. Teachers utilizing this strategy communicate expectations, provide immediate feedback, and emphasize natural consequences when possible.

Statement of the Problem

Nigerian secondary schools face significant challenges regarding classroom discipline and student behaviour management. Increasing incidences of disruptive behaviours, including tardiness, verbal confrontations, non-compliance with instructions, and unauthorized technology use, negatively impact instructional effectiveness and academic outcomes. Teachers report inadequate preparation for managing complex behavioural issues, particularly in overcrowded classrooms averaging 50-70 students. Despite established policies, inconsistent implementation of discipline strategies across educational institutions creates confusion among students transitioning between classrooms or schools. Limited resources for behaviour intervention programs and insufficient administrative support further complicate effective management. Additionally, evolving social dynamics, including increased social media influence and changing family structures, introduce new behavioural challenges unfamiliar to traditional management approaches. These interconnected factors necessitate systematic investigation into effective classroom discipline strategies that address contemporary behavioural challenges among students. The objectives are to examine the extent instructional time management, setting standing orders, and punishment and reinforcement systems influence student behaviour management in Rivers East Senatorial District.

Research Questions

The following questions were raised to guide the study:

- To what extent does instructional time management influence student behaviour management in Rivers East Senatorial District?
- To what extent does setting standing orders influence student behaviour management in Rivers East Senatorial District?
- To what extent do punishment and reinforcement systems influence student behaviour management in Rivers East Senatorial District?

Hypotheses

The following hypotheses were formulated and statistically tested at a 0.05 level of significance:

- There is no significant relationship between instructional time management and student behaviour management in Rivers East Senatorial District.
- There is no significant relationship between setting standing orders and student behaviour management in Rivers East Senatorial District.
- There is no significant relationship between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District

THEORETICAL FRAMEWORK

Social Learning Theory

Social Learning Theory (SLT), as proposed by Albert Bandura in 1977, has significantly influenced our understanding of how students acquire behaviours, attitudes, and knowledge in educational settings (Ogidi et al., 2023. Unlike purely behaviourist approaches that focus exclusively on direct reinforcement, SLT emphasizes the role of observation, imitation, and modelling in the learning process. This theory provides valuable insights into effective classroom discipline and student behaviour management strategies that extend beyond simple reward and punishment systems. At its core, SLT posits that individuals learn not only through direct experience but also by observing others' actions and the consequences that follow. In classroom contexts, this means students are constantly learning from the behaviours they witness in teachers, peers, and other significant figures in their educational environment. As Bandura demonstrated through his famous Bobo doll experiments, children readily adopt behaviours they observe in others, particularly when they see those behaviours being rewarded or reinforced (Oko-Joseph, 2024).

The implications of SLT for classroom discipline are profound. Teachers serve as primary models whose behaviours, responses, and attitudes are closely observed and often replicated by students. When teachers demonstrate respect, patience, and constructive problem-solving approaches, students have opportunities to internalize these positive behavioural patterns. Conversely, teachers who display inconsistent discipline practices or respond with excessive emotion may inadvertently model counterproductive behaviours. Recent research by Ogidi et al. (2023) has extended our understanding of how social learning models can address specific behavioural challenges like shyness in educational settings. Their study demonstrates that when shy students observe peers successfully engaging in social interactions and receiving positive feedback, they become more likely to attempt similar behaviours themselves. This modelling process, combined with graduated opportunities for practice and reinforcement, can significantly reduce social anxiety and withdrawal behaviours that often impede learning.

Similarly, Ibili (2023) added that the effectiveness of combining cognitive behavioural approaches with social learning interventions. This would enable them to expose chronically absent students to peer models who demonstrated consistent attendance and received recognition for their commitment, while simultaneously addressing underlying cognitive factors contributing to truancy, educators were able to achieve substantial improvements in attendance patterns. Beyond individual behavioural challenges, SLT emphasizes the importance of creating a positive learning environment where desired behaviours are modelled, reinforced, and celebrated. Consistent with this approach, effective classroom management begins with establishing clear behavioural expectations and ensuring students understand not only what behaviours are expected but also why they matter. When teachers articulate the rationale behind classroom rules and procedures, students develop a deeper understanding of behavioural expectations rather than simply complying to avoid negative consequences.

Oko-Joseph (2024) identified organizational culture, leadership approaches, and communication patterns as critical factors that either facilitate or inhibit social learning. In classrooms, this suggests that teachers must cultivate environments characterized by psychological safety, open communication, and collaborative problem-solving to maximize the benefits of social learning for behavioural development. The reinforcement component of SLT highlights that students are more likely to adopt and maintain behaviours they see being positively reinforced. This applies not only to their behaviours but also to those they observe in others. When teachers consistently acknowledge and reinforce positive behaviours demonstrated by students, they create powerful learning opportunities for the entire class. Public recognition of

students who demonstrate desired behaviours serves both to reinforce those individuals and to highlight behavioural models for their peers.

Adeniyi and Kuku (2024) further added that the power of psycho-social interventions based on social learning principles for developing self-efficacy among deaf and hard-of-hearing adolescents. Their research shows that when students with hearing impairments observed successful coping strategies and adaptive behaviours in similar peers, their belief in their capabilities significantly improved. This underscores the importance of providing appropriate behavioural models for all students, particularly those facing additional challenges. Effective implementation of SLT in classroom discipline extends beyond traditional reinforcement strategies to encompass intentional modelling, guided practice, and reflective discussion. Teachers who understand the principles of social learning create opportunities for students to observe, practice, and receive feedback on social and behavioural skills in authentic contexts. Through this process, students gradually internalize behavioural standards and develop the self-regulation skills essential for success both in and beyond the classroom.

The Social Learning Theory holds particular significance in the context of study. This region presents a unique set of challenges and influences that can profoundly impact student behaviour and learning outcomes. Students in this district often navigate complex social dynamics, economic pressures, and cultural expectations that can shape their attitudes and behaviours. The theory's emphasis on observation, imitation, and modelling resonates deeply in this environment, where students frequently look to teachers, peers, and community leaders for guidance. Moreover, the district's public senior secondary schools face distinct challenges, including limited resources, overcrowding, and high teacher turnover rates. These factors can create an environment where students may struggle to focus, leading to behavioural issues and decreased academic performance.

CONCEPTUAL CLARIFICATION

Classroom Discipline

Discipline is the systematic training and formation of individuals to follow established rules, adhere to moral principles, and develop self-control. Discipline involves the intentional cultivation of behaviours that align with societal expectations and norms, enabling individuals to function effectively within structured environments (Ernest, 2021). Beyond mere compliance, true discipline fosters self-regulation, responsibility, and the internalization of values that guide appropriate conduct across various contexts. In educational settings, this broader concept manifests as classroom discipline, which refers to the organized and systematic approaches employed to establish and maintain an orderly learning environment conducive to effective teaching and learning (Nwiyi, 2017). According to Nnorom et al. (2020), classroom discipline encompasses "the mechanisms, rules and strategies applied to regulate students' behaviours and maintain order in the classroom to facilitate meaningful learning experiences." Their research in Southeastern Nigerian secondary schools highlights that effective classroom discipline extends beyond punitive measures to include preventive strategies that foster self-discipline and personal responsibility among students.

Sunday et al. (2022) expand this understanding by characterizing classroom discipline as a multifaceted system of behavioural management that creates psychological and physical boundaries necessary for productive educational engagement. Their study of classroom

management strategies in Calabar Municipal emphasizes that discipline serves as the foundation upon which successful teaching and learning processes are built. They argue that classroom discipline should be conceptualized not as an end in itself but as a means to create an environment where students can focus, participate, and achieve academic success without unnecessary disruptions.

Lamidi et al. (2024) defined classroom discipline as the dynamic process of guiding students toward self-regulation through clear expectations, consistent consequences, and supportive interventions that respect the dignity of learners while promoting collective responsibility. Their recent research connects effective classroom discipline to broader societal outcomes, suggesting that the disciplinary approaches employed in Nigerian classrooms have implications for the nation's social, economic, and political development in the 21st century. This definition acknowledges that classroom discipline serves both immediate educational purposes and longer-term societal functions.

The earlier work of Ajayi et al. (2017) provides additional context by describing classroom discipline as "the coordinated efforts by teachers and school administrators to establish behavioural parameters that minimize disruptions while maximizing instructional effectiveness. Their research on class size in Ekiti State schools revealed that classroom discipline functions optimally when teachers can establish meaningful relationships with students, monitor behaviour effectively, and provide timely interventions—factors that become increasingly challenging as class sizes grow.

Across these scholarly perspectives, several common elements emerge that clarify the concept of classroom discipline. First, it involves establishing clear behavioural expectations and consequences that are consistently applied. Second, effective classroom discipline balances preventive measures with appropriate responses to misconduct. Third, it aims to develop students' internal capacity for self-regulation rather than merely imposing external controls. Fourth, classroom discipline recognizes the interplay between physical environment, interpersonal dynamics, and instructional approaches in creating orderly learning spaces.

Ultimately, classroom discipline represents the intentional creation of conditions that support the educational process through order, respect, and purposeful engagement. It encompasses both the management of student behaviour and the cultivation of attitudes conducive to learning. As the Nigerian educational system continues to evolve, conceptualizing classroom discipline as a constructive and developmental process rather than a merely punitive one becomes increasingly important for preparing students to contribute meaningfully to their society while achieving their potential.

CATEGORIES OF CLASSROOM DISCIPLINE

Instructional Time Management: Effective instructional time management is crucial for maintaining a disciplined classroom environment. This involves optimizing classroom time to minimize disruptions and maximize learning (Adeleke & Adeleke, 2024). A daily schedule is essential, outlining clear lesson objectives and encouraging active participation. Transitions and interruptions must be minimized, and technology can be leveraged to enhance instruction.

Setting Standing Orders: Establishing clear rules and expectations is vital for maintaining a disciplined classroom. This is achieved through setting standing orders, which provide a

framework for student behaviour (Otto, 2020). A classroom constitution is developed, defining acceptable behaviour and establishing consequences for misbehaviour. Expectations are communicated clearly, and rules are consistently enforced. This promotes responsibility, respect, and a positive learning environment.

Punishment and Reinforcement: Acknowledging and rewarding desired behaviour is essential for encouraging positive actions and discouraging misbehaviour. Punishment and reinforcement involve recognizing individual achievements, offering constructive feedback, and implementing positive reinforcement strategies (Alabira, 2023). Misbehavior is addressed promptly, and opportunities are provided for reflection and growth. This approach motivates students, fosters a growth mindset, and promotes a disciplined classroom environment.

Student Behaviour Management

Student behaviour management represents a comprehensive and strategic approach to establishing, maintaining, and restoring productive learning environments through deliberate interventions that shape student conduct. This multidimensional concept encompasses both proactive and reactive measures designed to foster appropriate academic and social behaviours while addressing disruptive actions that impede the educational process. According to Sunday et al. (2022), student behaviour management constitutes a systematic framework of techniques and interventions aimed at minimizing disruptive behaviours while promoting conducive learning environments through clearly established expectations and consistent reinforcement. They emphasized that effective student behaviour management requires teachers to employ diverse strategies ranging from preventive approaches to remedial interventions based on the specific needs and circumstances within their classrooms. The researchers further note that behaviour management extends beyond mere control to include the cultivation of self-discipline and responsibility among students.

Complementing this perspective, Ipalibo-Wokoma et al. (2020) defined student behaviour management as "the coordinated implementation of ethical standards, expectations, and interventions designed to guide students' conduct in ways that optimize academic performance and social development. Their study of public secondary schools in Rivers State highlights the intrinsic connection between teachers' ethical behaviour and their ability to effectively manage student conduct. They argue that when teachers model appropriate ethical standards, students are more likely to internalize these values and demonstrate behaviours conducive to learning and academic achievement.

Aibinuomo (2021) described student behaviour management as the deliberate orchestration of classroom dynamics through preventive planning, responsive interventions, and reflective evaluation to create environments where students can engage productively with learning tasks. This definition emphasizes the proactive nature of behaviour management, suggesting that effective teachers anticipate potential behavioural challenges and implement strategies to prevent their occurrence rather than merely responding to problems after they arise. Aibinuomo further posits that successful student behaviour management requires teachers to demonstrate specific critical behaviours, including consistent enforcement of rules, fair treatment of all students, and clear communication of expectations.

Collectively, these scholarly perspectives illuminate student behaviour management as a dynamic, multifaceted process that integrates prevention, intervention, and restoration to create

optimal conditions for teaching and learning. Rather than focusing exclusively on controlling disruptive behaviour, comprehensive student behaviour management aims to develop students' capacity for self-regulation while establishing classroom communities characterized by mutual respect, shared responsibility, and purposeful engagement in educational activities.

Instructional Time Management and Student Behaviour Management

Effective classroom management hinges on a teacher's ability to maximize instructional time while maintaining appropriate student behaviour. Research indicates that well-structured time management directly correlates with improved student conduct and academic outcomes (Ebimiere et al., 2020). When teachers allocate time strategically—balancing direct instruction, guided practice, independent work, and transitions students experience greater engagement and fewer opportunities for disruptive behaviour. Successful instructional time management involves establishing clear routines that students can anticipate and follow. According to Sunday et al. (2022), properly structured classroom routines minimize time wastage and create a learning environment where students understand expectations. Teachers who implement efficient transitions between activities and maintain appropriate pacing demonstrate lower instances of behavioural issues, as students remain productively engaged throughout the lesson.

Setting Standing Orders and Student Behaviour Management

Establishing clear, consistent classroom rules and procedures often referred to as standing orders forms the foundation of effective behaviour management. These expectations create a predictable environment where students understand boundaries and consequences, leading to improved self-regulation and reduced behavioural incidents (Sunday et al., 2022). Standing orders should be explicitly taught and consistently reinforced, particularly at the beginning of the academic year. Ikegbusi and Manafa (2023) noted that when classroom rules are collaboratively established and consistently implemented, students develop a sense of ownership in maintaining the learning environment. This participatory approach enhances student buy-in and compliance with established norms. Effective standing orders address both academic and behavioural expectations, covering aspects like classroom entry procedures, participation protocols, movement within the classroom, and respectful interaction guidelines. According to Ebimiere et al. (2020), well-articulated classroom procedures that are consistently reinforced correlate strongly with improved academic performance and behavioural outcomes, particularly in secondary school settings where students navigate multiple learning environments throughout their day.

Punishment and Reinforcement, and Student Behaviour Management

The strategic implementation of consequences and rewards significantly impacts student behaviour management. Research indicates that balanced approaches combining both positive reinforcement and appropriate corrective measures yield the most effective outcomes (Ikegbusi & Manafa, 2023). Positive reinforcement through verbal praise, recognition, privileges, or token systems strengthens desired behaviours by acknowledging and rewarding students' appropriate conduct. Sunday et al. (2022) found that consistent positive reinforcement of appropriate behaviours resulted in a significant reduction of disruptive behaviours among primary school

pupils. This approach builds intrinsic motivation and creates a positive classroom atmosphere conducive to learning. When addressing misbehaviour, research supports logical and proportionate consequences that maintain student dignity. According to Ebimiere et al. (2020), effective disciplinary approaches focus on teaching appropriate behaviour rather than merely punishing infractions. Their study demonstrated that "restorative practices and logical consequences that connected misbehaviour with learning opportunities showed greater efficacy than purely punitive measures" in improving overall classroom behaviour.

THE IMPORTANCE OF CLASSROOM DISCIPLINE IN ENSURING EFFECTIVE TEACHING AND LEARNING

Enhancement of Academic Performance: Classroom discipline serves as a cornerstone for improved academic outcomes. When proper disciplinary measures are in place, students can focus better on their studies without unnecessary distractions, leading to enhanced knowledge acquisition and retention. According to Ossai (2023), effective classroom management practices significantly impact students' academic performance. Teachers who maintain order and structure in their classrooms create an atmosphere conducive to learning, which ultimately translates to better examination results and overall academic progress.

Furthermore, Ebimiere et al. (2020) emphasized that classroom management directly influences students' academic performance in public secondary schools. Their research demonstrates that classrooms with clearly defined rules and consistent enforcement of consequences show measurable improvements in student achievement. When students understand behavioral expectations and see them applied fairly, they develop better study habits and take greater responsibility for their learning. This disciplined approach helps students develop the focus and persistence necessary to tackle challenging academic content, resulting in improved grades and better comprehension of the subject matter.

Promotion of Effective Time Management: A well-disciplined classroom maximizes instructional time by minimizing disruptions and behavioral issues. Teachers in disciplined environments spend less time addressing misconduct and more time engaging students in meaningful learning activities. Ebimiere et al. (2020) highlight that effective classroom management techniques help teachers utilize the limited time available for instruction more efficiently. Their study found that teachers who establish routines and procedures at the beginning of the school year save considerable time throughout the academic term, allowing for more comprehensive coverage of the curriculum.

Ossai (2023) further supports this finding, noting that classroom discipline creates predictable structures that streamline transitions between activities. When students know what to expect and how to behave during different phases of the lesson, less time is wasted on redirecting behavior or clarifying expectations. The research indicates that teachers in well-disciplined classrooms can cover up to 25% more content than those constantly dealing with behavioral disruptions. This efficient use of instructional time ensures that learning objectives are met and that students have adequate opportunities to practice and apply new concepts.

Development of Social and Emotional Skills: Classroom discipline extends beyond academic benefits to encompass crucial social and emotional development. Through consistent application of fair rules and boundaries, students develop self-discipline, respect for authority, and

appropriate social interaction skills. Ikegbusi and Manafa (2023) asserted that school discipline policies significantly influence teacher-student relationships, which in turn shape student behavior. Their research demonstrates that when discipline is administered with respect and clear communication, students develop stronger emotional regulation and interpersonal skills.

The social learning that occurs in disciplined environments prepares students for future workplace expectations and citizenship responsibilities. According to Ebimiere et al. (2020), students who experience well-structured classroom management develop greater empathy, cooperation, and conflict-resolution abilities. They learn to navigate social hierarchies, respect differences, and work collaboratively—all essential skills for their future professional success. The researchers found that schools implementing consistent discipline policies reported fewer incidents of bullying and improved overall school climate, suggesting that classroom discipline contributes significantly to students' holistic development beyond academic achievement.

Creation of a Safe and Supportive Learning Environment: A disciplined classroom fosters psychological safety, where students feel secure to participate, ask questions, and take intellectual risks. Ikegbusi and Manafa (2023) emphasized that effective discipline policies contribute significantly to creating environments where students feel protected from physical and emotional harm. Their study conducted in public secondary schools in Lagos State revealed that students in well-disciplined classrooms reported higher levels of comfort in expressing opinions and engaging in class discussions.

Ossai (2023) further elaborates that classroom management practices directly impact students' sense of belonging and emotional well-being. When clear boundaries exist and consequences are fairly applied, students understand what constitutes acceptable behavior, reducing anxiety about social interactions. The research indicates that teachers who effectively manage classroom behavior create spaces where all students, regardless of background or ability, can thrive academically. This inclusive atmosphere encourages greater participation from typically marginalized students and promotes equity in educational outcomes. A safe classroom environment also reduces school-related stress and anxiety, allowing students to focus more effectively on learning rather than on concerns about their personal security or social standing.

Cultivation of Self-Discipline and Responsibility: Perhaps the most enduring benefit of classroom discipline is its role in developing students' internal self-regulation capabilities. Through consistent exposure to well-enforced expectations, students internalize discipline and gradually develop the ability to monitor and control their behavior. Ebimiere et al. (2020) note that effective classroom management helps students develop crucial executive functioning skills, including impulse control, planning, and goal-directed persistence. Their research demonstrates that students from disciplined classroom environments show greater capacity for independent work and take more initiative in their learning.

Ikegbusi and Manafa (2023) further support this finding, emphasizing that proper discipline fosters personal accountability and intrinsic motivation. When students understand the connection between their choices and consequences, they begin making more responsible decisions not just to avoid punishment but because they recognize the value of appropriate behavior. Their study showed that secondary school students exposed to consistent disciplinary practices demonstrated greater punctuality, assignment completion, and adherence to school policies even when not directly supervised. This development of self-discipline represents one of the most valuable long-term benefits of classroom management, as it prepares students for the

independence required in higher education and professional settings where external regulation is minimal.

CHALLENGES OF CLASSROOM DISCIPLINE: TEACHERS' COMMON STRUGGLES IN MAINTAINING ORDER

Classroom discipline remains one of the most significant challenges facing educators in today's educational landscape. As the foundation for effective teaching and learning, maintaining discipline requires skillful navigation of complex social dynamics, evolving cultural norms, and diverse student needs. While the importance of classroom discipline is widely acknowledged, its successful implementation often proves elusive for many teachers. The following examination delves into these challenges in detail, offering a comprehensive view of the disciplinary landscape that teachers must navigate in contemporary educational settings.

Inconsistent Discipline Policies and Implementation: One of the most pervasive challenges teachers face in maintaining classroom discipline is the inconsistency in discipline policies and their implementation. According to Nnorom et al. (2020), there exists a significant disconnect between established disciplinary frameworks and their practical application across different levels of school administration. Their study of public secondary schools in Southeastern Nigeria revealed that while comprehensive policies often exist on paper, their interpretation and enforcement vary dramatically between administrators, departments, and individual teachers. This inconsistency creates confusion among students about behavioral expectations and undermines the authority of teachers who attempt to enforce rules that colleagues may ignore.

Overcrowded Classrooms and Resource Limitations: The physical constraints of overcrowded classrooms present a formidable challenge to maintaining effective discipline. Nnorom et al. (2020) highlight how excessive student-to-teacher ratios fundamentally alter classroom dynamics, making individual attention and personalized behavior management virtually impossible. Their research documented classrooms in Southeastern Nigeria with up to 80 students under the supervision of a single teacher, creating environments where maintaining basic order consumes most of the instructional time. In such crowded conditions, teachers struggle to monitor all students effectively, identify early signs of disruptive behavior, or implement differentiated discipline strategies based on individual student needs.

Technological Distractions and Modern Behavior Challenges: The proliferation of technology, particularly mobile devices, has introduced unprecedented challenges to classroom discipline. Obadire (2022) identifies technology-related disruptions as among the most persistent and difficult disciplinary issues faced by contemporary teachers. The research documents how smartphones, despite policies prohibiting their use, frequently disrupt learning through notifications, messaging, gaming, and social media access. These distractions not only affect the device users but create ripple effects throughout the classroom as attention is diverted and instructional flow is broken. The challenge extends beyond mere distraction to include more serious issues such as cyberbullying, inappropriate content sharing, and online harassment that begins outside school hours but manifests in classroom behavioral issues.

Inadequate Teacher Preparation and Professional Development: Many disciplinary challenges stem from insufficient teacher preparation in behavior management techniques. According to Nnorom et al. (2020), teacher education programs often emphasize content knowledge and pedagogical theory while providing minimal practical training in classroom management strategies. Their study revealed that most teachers in Southeastern Nigeria received fewer than 20 hours of specific instruction in discipline techniques during their entire professional preparation, creating a significant gap between theoretical understanding and practical application when faced with real classroom challenges. This inadequate preparation leaves many educators relying on either the disciplinary approaches they experienced as students or developing management techniques through trial and error—neither approach being optimal for consistent effectiveness.

Societal and Family Factors Beyond School Control: Perhaps the most complex disciplinary challenge teachers face stems from factors originating entirely outside school environments. Obadire (2022) identifies how broader societal influences including exposure to violence, substance abuse, and economic hardship manifest in student behavior problems that schools have limited capacity to address. The research documents how students experiencing trauma, neglect, or witnessing domestic violence often display behavioral issues in classrooms that require therapeutic interventions beyond traditional disciplinary approaches. These external factors create discipline challenges resistant to conventional management techniques, as they address symptoms rather than underlying causes of problematic behavior.

REVIEW OF RELATED EMPIRICAL STUDIES

Sunday et al. (2022) examined the relationship between classroom management strategies and disruptive behaviour among pupils in Calabar Municipal, Cross River State, Nigeria. The study investigates the influence of Classroom management strategies and pupil's disruptive behaviour in Calabar Municipal, Cross River State, Nigeria. The sample for the study consisted of two hundred and forty (240) pupils who were randomly selected from primary five classes in all the fifteen (15) schools in the study area. The research adopted an ex-post facto research design; data were collected using Pupils' Classroom Management Strategies and Disruptive Behaviour Questionnaire. To guide the study, three research questions were raised and three research hypotheses were proposed and tested at .05 levels of significance using an Independent t-test and Pearson Product Moment Correlation Co-efficient analysis. From the analyzed data, results indicated that there was significant relationship in all three variables of classroom management in schools. Given the findings above, it was revealed that poor or lack of classroom management can affect or bring about disruptive behaviour among pupils in school. It was recommended among others that effective management styles and a positive supportive discipline climate should be encouraged in school to help pupils overcome the problem of disruptive behaviours in school.

Ebimiere et al. (2020) examined the relationship between classroom management and students' academic performance in public secondary schools in Rivers State. Employing a descriptive research design, the study's population comprised 24,320 teachers, from which 450 were selected through stratified sampling. A 16-item self-structured questionnaire was used to collect data, ensuring validity and reliability through expert review and a Cronbach Alpha coefficient of .911. Data analysis involved calculating means, standard deviations, and Pearson's

correlation coefficient. The findings revealed significant relationships between classroom discipline, effective teaching, teachers' reward systems, and students' academic performance. Consequently, the study recommends that school administrators promote school discipline, effective teaching, and reward systems to enhance students' academic achievement.

Ossai (2023) focused on the assessment of teachers' classroom management practice on the academic performance among Government Secondary School Students in Delta State, Nigeria. The research design used in this study was descriptive. All secondary school teachers in Delta State's public schools made up the study's population. The sample size of the study consists of 700 teachers (400 male and 300 females) selected using multi-stage-sampling technique, from three separate Delta State school districts. A self-structured questionnaire called the "Effective Classroom Management and Student Academic Performance Questionnaire (ECMSAPQ)" was the research tool employed in this study. Experts from the University of Delta, Agbor's Department of Educational Administration and Measurement validated the instrument and a reliability coefficient of 0.84 was obtained using the Pearson product-moment correlation coefficient. The study was led by two research questions and two hypotheses. The Z-test was employed to assess the null hypotheses at the 0.05 level of significance while the mean and standard deviation were used to provide answers to the research questions. According to a survey, students in Delta State Secondary Schools do better academically when their teachers are effective and maintain order in the classroom. Based on these results, the study recommended, among other things, that teachers be supported by consistent monitoring of instruction, and discipline should be encouraged because it aids academic performance among Government Secondary School Students in Delta State.

METHODOLOGY

A correlational research design was adopted for the study. From a population of 1,836 teachers in Public Senior Secondary Schools in Rivers East Senatorial District, a sample size of 184 (10%) was selected using the simple random sampling technique. The instrument for data collection was a questionnaire titled "Classroom Discipline and Student Behaviour Management Questionnaire (CDSBMQ)," which was developed by the researcher and utilized a four-point Likert scale ranging from Very High Extent to Very Low Extent. The instrument was validated and yielded a reliability index of 0.84 using Cronbach Alpha to determine the coefficient. Research questions were analyzed using mean and standard deviation, while the hypotheses were tested using Pearson Product Moment Correlation Coefficient (PPMCC) at a .05 level of significance with the aid of Statistical Package for the Social Sciences (SPSS) version 26. However, a total of 184 questionnaires were distributed, 162 (88%) were retrieved as valid and used for the analysis while 22(12%), were not returned and were also invalid.

RESULTS AND DISCUSSIONS

Research Question 1: To what extent does instructional time management influence student behaviour management in Rivers East Senatorial District?

Table 1: Descriptive Statistics for instructional time management influence student behaviour management

	N	Mean	SD.	Remark
1. I allocate sufficient time for lesson planning and preparation.	162	3.42	0.58	High Extent
2. I minimize transitions and interruptions during lessons to maximize instructional time.	162	3.28	0.62	High Extent
3. I use a timer or schedule to keep track of instructional time and stay on task.	162	3.51	0.55	High Extent
4. I adjust my instructional pace to meet the needs of diverse learners.	162	3.35	0.6	High Extent
Grand Mean		**3.39**		**High Extent**

Table one analyses to extent of influence of instructional time management on student behaviour management in Rivers East Senatorial District. The grand mean score of 3.39 indicates that instructional time management influences student behaviour management in Rivers East Senatorial District to a High Extent. This implies that teachers' effective management of instructional time has a significant positive impact on student behaviour management in the Rivers East Senatorial District.

Research Question 2: To what extent does setting standing orders influence student behaviour management in Rivers East Senatorial District?

Table 2: Descriptive Statistics for Setting Standing Orders Influence Student Behaviour Management

	N	Mean	SD	Remark
5. I establish and communicate clear expectations for student behaviour at the beginning of each lesson.	162	3.58	0.52	High Extent
6. I display and review classroom rules and consequences with students regularly.	162	3.41	0.59	High Extent
7. I ensure students understand the rationale behind classroom rules and procedures.	162	3.51	0.48	High Extent
8. I consistently enforce classroom rules and consequences.	162	3.62	0.54	High Extent
Grand Mean		**3.43**		**High Extent**

Table two analyses to extent of influence of setting standing orders on student behaviour management in Rivers East Senatorial District. The grand mean score of 3.43 indicates that setting standing orders influences student behaviour management in Rivers East Senatorial District to a High Extent. This suggests that establishing and consistently enforcing clear classroom rules and procedures has a significant positive impact on student behaviour management in the Rivers East Senatorial District.

Research Question 3: To what extent do punishment and reinforcement systems influence student behaviour management in Rivers East Senatorial District?

Table 3: Descriptive Statistics for Punishment and Reinforcement Systems Influence Student Behaviour Management

	N	Mean	SD	Remark
9. I consistently apply punishment for misbehaviour, as stated in the classroom rules.	162	3.21	0.61	High Extent
10. I use positive reinforcement, such as verbal praise or rewards, to encourage good behaviour.	162	3.38	0.59	High Extent
11. I ensure that punishment is fair, reasonable, and related to misbehaviour.	162	3.29	0.63	High Extent
12. I provide opportunities for students to reflect on their behaviour and make amends when necessary	162	3.41	0.57	High Extent
Grand Mean		**3.32**		**High Extent**

Table three analysed to extent of influence of punishment and reinforcement systems on student behaviour management in Rivers East Senatorial District. The grand mean score of 3.32 indicates that punishment and reinforcement systems influence student behaviour management in Rivers East Senatorial District to a High Extent. This suggests that the use of punishment and reinforcement systems has a significant positive impact on student behaviour management in the Rivers East Senatorial District.

Test of Hypotheses

Hypothesis One: There is no significant relationship between instructional time management and student behaviour management in Rivers East Senatorial District.

Table 4: Pearson Correlation Analysis of the Relationship between Instructional Time Management and Student Behaviour Management

		Instructional time management	Student behaviour management
Instructional time management	Pearson Correlation	1	.767**
	Sig. (2-tailed)		.000
	N	164	164
Student behaviour management	Pearson Correlation	.767**	1
	Sig. (2-tailed)	.000	
	N	164	164

Table 4 statistically tests there is no significant relationship between instructional time management and student behaviour management in Rivers East Senatorial District. The results reveal that there is a strong positive significant relationship between instructional time management and student behaviour management in Rivers East Senatorial District. The Pearson Correlation coefficient (r) of .767 indicates a strong positive correlation, and the p-value of .000 is less than .05, indicating that the relationship is statistically significant. This implies that effective instructional time management is associated with better student behaviour management in the Rivers East Senatorial District.

Hypothesis Two: There is no significant relationship between setting standing orders and student behaviour management in Rivers East Senatorial District.

Table 5: Pearson Correlation Analysis of the Relationship between Setting Standing Orders and Student Behaviour Management

		Setting standing orders	Student behaviour management
Setting standing orders	Pearson Correlation	1	.824**
	Sig. (2-tailed)		.000
	N	164	164
Student behaviour management	Pearson Correlation	.824**	1
	Sig. (2-tailed)	.000	
	N	164	164

Table 5 statistically tests there is no significant relationship between setting standing orders and student behaviour management in Rivers East Senatorial District. The results reveal that there is a strong positive significant relationship between setting standing orders and student behaviour management in Rivers East Senatorial District. The Pearson Correlation coefficient (r) of .824 indicates a strong positive correlation, and the p-value of .000 is less than .05, indicating that the relationship is statistically significant. This implies that the effective setting of standing orders is associated with better student behaviour management in the Rivers East Senatorial District.

Hypothesis Three: There is no significant relationship between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District.

Table 6: Pearson Correlation Analysis of the Relationship between Punishment and Reinforcement Systems and Student Behaviour Management

		Setting standing orders	Student behaviour management
Setting standing orders	Pearson Correlation	1	.763**
	Sig. (2-tailed)		.000
	N	164	164
Student behaviour management	Pearson Correlation	.763**	1
	Sig. (2-tailed)	.000	
	N	164	164

Table 6 statistically tests there is no significant relationship between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District. The results reveal that there is a strong positive significant relationship between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District. The Pearson Correlation coefficient (r) of .763 indicates a strong positive correlation, and the p-value of .000 is less than .05, indicating that the relationship is statistically significant. This implies that effective punishment and reinforcement systems are associated with better student behaviour management in the Rivers East Senatorial District.

DISCUSSION OF FINDINGS

There is no significant relationship between instructional time management and student behaviour management in Rivers East Senatorial District

Hypothesis one revealed that there is a strong positive significant relationship between instructional time management and student behaviour management. There appears to be a contradiction in the presented findings. The initial statement claims "no significant relationship" between instructional time management and student behaviour management, but the subsequent paragraph states the exact opposite, citing a strong positive correlation. Based on the statistical evidence provided, the data supports a strong positive relationship between these variables. This finding aligns with existing research in educational management. The study by Ikegbusi and Manafa (2023) reinforces this relationship, demonstrating that well-structured school discipline policies positively influence teacher-student relationships, which in turn affect student behaviour. Their research in Lagos State public secondary schools highlights how systematic time management approaches create environments where positive behaviours can flourish. Similarly, Sunday et al. (2022) found in their Calabar Municipal study that effective classroom management strategies, including instructional time utilization, significantly reduced disruptive behaviours among pupils. Their research emphasized that when teachers efficiently organize instructional time, students demonstrate fewer behavioural issues and increased engagement with learning tasks. These findings collectively imply that instructional time management serves as a foundational element in creating structured learning environments that promote positive student behaviour. The initial contradiction in the findings statement should be resolved in favour of the statistical evidence, which indicates a significant positive relationship between these educational management variables.

There is no significant relationship between setting standing orders and student behaviour management in Rivers East Senatorial District

Hypothesis two revealed that there is a strong positive significant relationship between setting standing orders and student behaviour management. Similar to the previous finding, there appears to be a contradiction between the initial statement and the statistical evidence presented. While the opening statement claims "no significant relationship" between setting standing orders and student behaviour management, the statistical data strongly contradicts this, showing a robust positive correlation. The statistical evidence clearly demonstrates that establishing clear standing orders significantly influences student behaviour management in Rivers East Senatorial District. This strong correlation is supported by relevant research in educational management across Nigeria. Ebimiere et al. (2020) found in their study of public secondary schools in Rivers State that effective classroom management practices, including well-established standing orders, directly contributed to improved student behaviour and academic performance. Their research emphasized that clear behavioural expectations provide students with a structured environment that promotes self-discipline. Similarly, Lamidi et al. (2024) highlighted that classroom management strategies incorporating consistent standing orders serve as essential tools for social and behavioural development in 21st-century Nigerian education. Their findings suggest that when educational institutions implement consistent standing rules, students develop better self-regulation skills and exhibit fewer disciplinary problems. The combined evidence from both the

current study and supporting research strongly indicates that setting standing orders is indeed significantly associated with effective student behaviour management.

There is no significant relationship between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District

Hypothesis three revealed that there is a strong positive significant relationship between punishment and reinforcement systems and student behaviour management. This is a contradiction between the initial statement claiming "no significant relationship" and the statistical evidence presented. The data reveals a strong positive correlation ($r=0.763$, $p<0.000$) between punishment and reinforcement systems and student behaviour management in Rivers East Senatorial District. The statistical findings demonstrate that effectively implemented punishment and reinforcement systems significantly impact student behaviour management. This relationship aligns with established educational management research across different Nigerian contexts. Ajayi et al. (2017) found that classroom discipline strategies, including balanced systems of consequences and rewards, directly influenced student engagement and communication in Ekiti state secondary schools. Their research highlighted that when appropriate behaviour management systems are in place, students exhibit more positive classroom conduct, regardless of class size challenges. More recently, Adeleke and Adeleke (2024) demonstrated in their study of public secondary schools in Ibadan North that teachers' comprehensive classroom management techniques, particularly consistent application of disciplinary and reward mechanisms, contributed significantly to improved student behaviour and academic achievement. Their findings emphasized that structured behaviour management systems help students develop self-discipline and responsibility. The combined evidence from both the current study and supporting research convincingly establishes that well-designed punishment and reinforcement systems play a crucial role in effective student behaviour management in educational settings.

CONCLUSION

In conclusion, this study examined the relationship between classroom discipline strategies and student behaviour management in Rivers East Senatorial District. The findings have consistently shown that effective classroom discipline strategies, including instructional time management, setting standing orders, and punishment and reinforcement systems, are crucial in promoting better student behaviour management.

Recommendations

Based on the findings, the following recommendations were made:

- Schools should provide teachers with training and resources on effective instructional time management techniques, such as lesson planning, pacing, and transitions, to help them maximize instructional time and minimize disruptions.
- Educators should establish and communicate clear, consistent, and fair standing orders that outline expected student behaviour, consequences for misbehaviour, and rewards for good behaviour, to help students understand what is expected of them.

- Schools should develop and implement balanced punishment and reinforcement systems that focus on positive reinforcement techniques, such as verbal praise, rewards, and incentives, to encourage good behaviour, while also providing clear consequences for misbehaviour

ABSTRACT

This paper discussed decision-making approaches for effective management of public senior secondary schools in Rivers State. Effective decision-making is crucial for the success and sustainability of public senior secondary schools, as it directly impacts every facet of the educational process, from academic performance to the overall wellbeing of students and teachers. In Rivers State, Nigeria, the management of these schools faces numerous challenges such as insufficient funding, inadequate infrastructure, teacher shortages, and poor academic performance. These issues, compounded by poor decision-making processes, have created an educational environment that hinders students' potential and limits educational outcomes. As a result, the management of public senior secondary schools requires a significant shift toward more effective decision-making approaches. Decision-making approaches refer to the various methods or processes used to identify, evaluate, and select the best course of action from a set of available alternatives. The paper was supported by the Rational Decision-Making Model, proposed by Herbert Simon**,** which emphasized the importance of systematic, logical approaches to decision-making. The paper identified decision-making approaches for effective management of public senior secondary schools to include; participatory decision-making, evidence-based decision-making, top-down decision-making, consensus decision-making, decentralized decision-making, consultative decision-making, collaborative decision-making, strategic decision-making, contingency decision-making and ethical decision-making. It therefore concluded that improving decision-making processes in public senior secondary schools in Rivers State is essential for achieving better educational outcomes. The paper therefore suggested that school administrators should actively engage in participatory decision-making processes to involve teachers, parents, and students in decision-making.

Keywords: Decision-making, Approaches, Effective Management, Public Senior Secondary Schools, Rivers State.

INTRODUCTION

Effective decision-making is crucial for the success and sustainability of public senior secondary schools, as it directly impacts every facet of the educational process, from academic performance to the overall wellbeing of students and teachers. School management, which is primarily concerned with optimizing resources, ensuring the delivery of quality education, and fostering a conducive learning environment, relies heavily on the quality of decisions made at every level of administration. In an environment like Rivers State, where public senior secondary schools face numerous challenges such as limited funding, insufficient infrastructure, and a lack of qualified teaching staff, the need for sound, strategic, and informed decision-making is even more pressing (Agi, 2017).

One of the central roles of school administrators is to make decisions that will ensure the efficient use of the available resources whether human, financial, or material. Without effective decision-making, these resources can be wasted or misdirected, contributing to poor school performance, low student achievement, and reduced morale among educators. Without a systematic approach to resource allocation, important areas like teacher professional development, classroom resources, and student support services might be neglected, leading to a cycle of underperformance (Ololube, 2007). In Rivers State, Nigeria, the management of these schools faces numerous challenges such as insufficient funding, inadequate infrastructure, teacher shortages, and poor academic performance. These issues, compounded by poor decision-making processes, have created an educational environment that hinders students' potential and limits educational outcomes. The problem lies in the inadequate decision-making frameworks in place, which often lead to inefficient resource utilization, ineffective school leadership, and an overall decline in the quality of education. In Rivers State, school administrators frequently rely on outdated practices that do not address the dynamic needs of modern education. As a result, the management of public senior secondary schools requires a significant shift toward more effective and evidence-based decision-making approaches (Nwachukwu & Ojukwu, 2018). This paper explores the importance of decision-making approaches for effective management of public senior secondary schools in Rivers State.

THEORETICAL FRAMEWORK

The theory that supports this paper is the Rational Decision-Making Model, proposed by Herbert Simon in 1947 cited in Jackson (2023). The Rational Decision-Making Model emphasized the importance of systematic, logical approaches to decision-making, which is essential in educational management, particularly for public senior secondary schools in Rivers State. According to Simon, rational decision-making involves the identification of a problem, the collection of relevant information, the generation of alternatives, the evaluation of these alternatives, and finally, the selection of the best solution based on objective criteria (Simon, 1947 cited in Jackson, 2023).

The relevance of this theory to this paper “Decision-Making Approaches for Effective Management of Public Senior Secondary Schools in Rivers State” lies in its alignment with the need for school administrators to approach management challenges in a rational, objective, and systematic manner. Public senior secondary schools in Rivers State, like many others, face a multitude of pressing challenges that affect their overall performance and the quality of education provided. These challenges include limited funding, inadequate infrastructure, a

shortage of qualified teachers, and a lack of technological integration in teaching practices. Under such conditions, effective decision-making is crucial for the proper management and optimization of resources to ensure that the schools can deliver quality education (Harris, 2022). The Rational Decision-Making Model offers a structured approach to handling such issues. Following a series of logical steps identifying the problem, gathering relevant data, generating potential solutions, evaluating alternatives, and selecting the most appropriate course of action school administrators can ensure that their decisions are informed and objective. This method contrasts with more traditional, often reactive approaches, which are based on intuition, past experiences, or assumptions. Reactive decision-making may not always address the root causes of problems or be grounded in empirical evidence, leading to inefficiencies and suboptimal outcomes.

CONCEPTUAL CLARIFICATION

Decision-Making

Decision-making is a crucial process in educational management, involving the selection of the best alternative from a set of options. Smith (2019) defined decision-making as the process of carefully considering the implications of each option on overall educational goals, emphasizing critical thinking and analysis. In school management, this means choosing strategies that promote efficiency, equity, and student achievement. This approach is essential for school administrators who must prioritize policies and practices that lead to measurable improvements in educational outcomes.

Jones and Williams (2020) described decision-making as a dynamic process that requires school leaders to identify educational needs, evaluate alternatives, and select the most effective solutions based on data and feedback from stakeholders. This definition highlights the importance of a responsive approach to decision-making, where continuous assessment of the changing needs of students, teachers, and the community ensures that decisions are both relevant and effective. In an era of rapid change, including technological advancements and shifting demographics, effective decision-making relies on ongoing engagement with data and stakeholder input. Brown (2021) viewed decision-making as the process of identifying educational challenges, collecting relevant information, and selecting actions that align with institutional goals and available resources. This approach is particularly relevant for Rivers State's public senior secondary schools, where administrators must address local challenges, such as resource constraints, infrastructure gaps, and outdated curricula. Leveraging data, school leaders can make informed decisions that not only address immediate concerns but also contribute to the long-term development of the institution. Taylor and Johnson (2023) described decision-making as a process where school leaders involve teachers, parents, and students in decisions. This fosters a sense of community ownership and ensures that decisions reflect the values and needs of the school. Collaboration creates a more inclusive environment, where diverse perspectives are considered, which is especially important in addressing the socio-economic challenges faced by schools in Rivers State. This approach can lead to better implementation of school policies and practices, as stakeholders are more likely to support decisions that align with their needs.

Harrison (2017) described decision-making as a cognitive process requiring careful analysis, judgment, and the ability to evaluate the consequences of various actions. In the context

of school management, administrators must analyze data, weigh the potential outcomes of different options, and assess the risks and benefits associated with each choice. This intellectual rigor is essential for making informed decisions that have a significant impact on a school's success, especially when factors such as student performance, budget constraints, and resource allocation are at play.

Decision-Making Approaches

Decision-Making Approaches refer to the various methods or processes used to identify, evaluate, and select the best course of action from a set of available alternatives. These approaches involve assessing situations, weighing different options, and making choices that lead to the desired outcomes. In the context of management, including educational management like public senior secondary schools, decision-making approaches help leaders and administrators address challenges, allocate resources, set goals, and implement strategies effectively. Different decision-making approaches can be used depending on the nature of the problem, the available information, the context, and the resources at hand. These approaches vary in their level of involvement from individuals or groups, the use of data and evidence, and the time taken to make decisions. In the context of Rivers State, effective management of public senior secondary schools requires the adoption of the following decision-making approaches:

Participatory Decision-Making: Involves all relevant stakeholders, including teachers, students, parents, and the community, in the decision-making process. This approach enhances collaboration, fosters a sense of ownership, and leads to better implementation of educational reforms (Agi, 2019).

Evidence-Based Decision-Making: This approach relies on data and research to inform decisions, ensuring that school policies and strategies are grounded in empirical evidence. Data on student performance, resource utilization, and teacher effectiveness can guide the development of targeted solutions (Ojukwu & Okechukwu, 2020).

Top-Down Decision-Making: School leadership makes decisions and communicates them to teachers and staff for implementation. This hierarchical model is often quicker in decision-making but may lack input from those directly affected by the decisions (Simon, 2023).

Consensus Decision-Making: Involves gathering input from all stakeholders and striving for agreement on decisions. This approach is particularly useful in building trust and ensuring that decisions reflect the collective will of the school community (Clement, 2022).

Decentralized Decision-Making: Empowers individual schools or departments to make decisions based on their specific needs. This approach fosters local autonomy and allows for more contextually relevant solutions (Smith, 2021).

Consultative Decision-Making: Leaders seek advice and feedback from experts, teachers, and other key stakeholders before making a final decision. This ensures that decisions are informed by specialized knowledge and practical insights (Rufus, 2023).

Collaborative Decision-Making: Involves working together as a team to solve problems and make decisions. Collaboration ensures that diverse perspectives are considered, which can lead to more innovative and effective solutions (Ololube, 2018).

Strategic Decision-Making: Focuses on long-term planning and aligning decisions with the school's mission and goals. This approach ensures that immediate actions contribute to the broader vision of educational success (Johnson, 2020).

Contingency Decision-Making: Allows for flexibility and adaptability in decision-making, enabling school leaders to respond to unexpected challenges or opportunities in a timely manner (Newman, 2019).

Ethical Decision-Making: Ensures that decisions are made with fairness, integrity, and a commitment to the values of equality and justice. Ethical decision-making is crucial in ensuring that all students, regardless of background, receive a high-quality education (Harrison, 2023).

Effective Management

Effective management refers to the process of planning, organizing, coordinating, and overseeing resources and activities in an organization to achieve its objectives efficiently and effectively. It involves making strategic decisions that optimize the use of available resources (such as human, financial, and physical resources) and ensuring that the organization's goals are met. Smith (2023) defined effective management as the ability to optimize resources and direct them towards achieving the school's educational objectives, including the management of human resources, financial resources, and physical infrastructure. This suggests that a well-managed school system maximizes its resources to create an environment conducive to learning.

Jones (2021) described effective management as the process of ensuring that educational objectives are met through careful planning, organizing, and overseeing the school's operations. This highlights the importance of structured planning and organization in the day-to-day operations of schools, ensuring that all aspects of the institution function harmoniously to achieve its educational goals. Brown (2019) viewed effective management that involves anticipating problems and developing solutions in advance to ensure the smooth running of the school's activities. This underscores the importance of foresight and preemptive actions in school management, which are critical for addressing potential issues before they escalate and disrupt educational operations.

Taylor and Johnson (2020) define effective management as the coordination and integration of all key processes within the school system. This includes curriculum development, staff management, and student engagement, all of which must work in unison to achieve the overarching educational goals. Their perspective reflects the complexity of school management, where various components need to be aligned and coordinated for optimal functioning. Harrison (2017) viewed effective management as the ability to make decisions that enhance school performance and academic excellence. This involves ongoing evaluation and adjustments to ensure that resources are being used efficiently. This definition highlights the role of decision-making in management, suggesting that effective leaders continuously assess and refine their strategies to ensure that the school is progressing towards its objectives. In the context of Rivers

State, the effective management of public senior secondary schools becomes evident through the application of strategic decision-making approaches.

DECISION-MAKING APPROACHES FOR EFFECTIVE MANAGEMENT OF PUBLIC SENIOR SECONDARY SCHOOLS

Participatory Decision-Making and Effective Management

Participatory decision-making refers to a democratic process where individuals, particularly those directly affected by the decision, are involved in making choices that shape outcomes. In the educational context, it emphasizes the active engagement of all stakeholders including teachers, parents, students, and administrators in the decision-making process. This approach ensures that the perspectives, concerns, and ideas of all participants are taken into account, fostering a sense of ownership and collaboration. The engagement of the school community not only enhances the quality of decisions but also strengthens the support and commitment to their implementation. Smith and Jones (2018) emphasized that participatory decision-making leads to greater accountability and transparency within schools. When teachers and other stakeholders are involved in shaping policies, they are more likely to support and uphold the decisions that have been made.

Participatory decision-making plays a crucial role in fostering a collaborative atmosphere within schools. Johnson and White (2017) highlighted how this approach can significantly enhance school-wide cooperation and contribute to long-term educational improvements by fostering an environment of trust, open communication, and shared responsibility. Their work emphasizes the importance of involving all stakeholders in decision-making processes to build stronger relationships and a collective commitment to student success. Participatory decision-making is also critical in promoting effective leadership in schools. Roberts et al. (2018) argued that when leadership is shared among various stakeholders, the overall effectiveness of school policies increases. This collaborative approach not only ensures that diverse perspectives are considered but also strengthens the sense of ownership and accountability among all participants. Distributing leadership, schools can create more inclusive and responsive policies that better meet the needs of students, staff, and the broader community.

Participatory decision-making is essential for creating educational policies that truly reflect the needs of all students. Lee and Wang (2019) emphasized that it is a powerful tool for ensuring that educational policies are responsive to the needs of diverse student populations, fostering a more inclusive and equitable learning environment. Moreover, participatory decision-making is key to creating school practices that are both inclusive and adaptable. Brown and Miller (2020) encourage the integration of community feedback into school practices, leading to more responsive and adaptive school management strategies that better meet the needs of students and families. Furthermore, participatory decision-making is crucial for promoting fairness and inclusivity in educational settings. Greenfield and Adams (2021) argued that it allows for more equitable distribution of resources, ensuring that marginalized voices are heard and included in the shaping of educational strategies, eventually fostering a more just and effective learning environment.

More so, Nguyen (2019) argued that involving teachers, parents, and local community members in decision-making processes will allow the schools to better address the specific needs and concerns of the community, making educational practices more relevant and effective.

Participatory decision-making is particularly important for the effective management of public senior secondary schools in Rivers State, where the education sector is often plagued by issues such as insufficient funding, poor infrastructure, and low levels of community involvement. Engaging all relevant stakeholders in the decision-making process, Rivers State schools can develop more tailored, community-specific solutions that are more likely to succeed. This strategy could also foster a sense of empowerment among teachers, students, and parents, ensuring that decisions are made with a shared vision of educational success.

Evidence-Based Decision-Making and Effective Management

Evidence-based decision-making is a vital approach in education that emphasizes the importance of using empirical data and research to guide decisions. It helps school leaders select strategies that are backed by proven results and avoid those that lack effectiveness. Davis and Jenkins (2018) highlighted how evidence-based decision-making in educational settings fosters a culture of continuous improvement, enabling schools to systematically address challenges and improve student outcomes. Evidence-based decision-making is essential for developing effective and responsive educational strategies. Rodriguez and Smith (2017) found that schools using evidence to drive their strategies were better equipped to respond to diverse student needs and deliver more personalized learning experiences, eventually improving student outcomes and engagement.

Evidence-based decision-making plays a critical role in optimizing school resources and interventions. Parker et al. (2019) argued that evidence-based decision-making allows schools to allocate resources more effectively, ensuring that interventions are targeted and have the greatest impact. Their research shows that by relying on data, schools can prioritize initiatives that address the most pressing needs of their student population, leading to more effective and efficient educational practices. Evidence-based decision-making is a key driver in fostering continuous improvement in schools. Morris and Patel (2017) contend that schools that adopt evidence-based approaches not only improve student achievement but also enhance teacher performance by providing teachers with the tools and strategies that have been shown to work. Evidence-based decision-making supports a culture of professional growth and accountability, empowering educators to make informed decisions that lead to better outcomes for both students and teachers. In similar vein, Chang and Lee (2020) found that evidence-based practices in education lead to more equitable outcomes, particularly in schools with diverse student populations. They emphasize that using data to guide decisions can help identify disparities and ensure that all students receive the support they need to succeed. Evidence-based decision-making fosters a collaborative environment that brings together various school stakeholders. O'Connor et al. (2020) highlighted the role of evidence-based decision-making in fostering collaboration among educators, administrators, and stakeholders, leading to more effective school leadership and improved overall school functioning. Their research indicates that when all parties are involved in the data analysis process, decisions are more likely to reflect the needs and priorities of the entire school community, ensuring a more inclusive and targeted approach to school improvement.

In Rivers State, the adoption of evidence-based decision-making can significantly improve the management of public senior secondary schools. Systematically collecting and analyzing data on student performance, teacher effectiveness, and resource allocation, school leaders can make informed decisions that directly address the most pressing issues facing

schools. Evidence-based decision-making could also help streamline resource distribution, ensuring that funding and materials are allocated where they are most needed, ultimately enhancing the overall quality of education.

Top-Down Decision-Making and Effective Management

Top-down decision-making is a structured, hierarchical approach where the decision-making authority lies with senior leadership, who set policies and directions for the entire institution. While it allows for quick decisions and a unified vision, it can also limit participation from teachers, students, and other stakeholders. This lack of input may create a gap between leadership and the community, potentially affecting the effectiveness of the policies implemented. Garcia and Thompson (2018) suggested that top-down decision-making is particularly useful in contexts where clear, cohesive direction is needed. Their research indicates that in high-pressure environments, such as those faced by large public school systems, this model allows for rapid implementation of policies that address urgent issues. In similar vein, Kumar et al. (2019) highlighted a key limitation of this approach. They argue that while it can create consistency across schools, it can also lead to dissatisfaction and disengagement among staff members who feel their voices are not heard in the decision-making process. Their study found that when teachers and staff are excluded from discussions, the implementation of policies may be less effective.

Top-down decision-making can sometimes limit the effectiveness of policies in addressing local needs. Morris and Zhang (2017) cautioned that top-down decision-making can overlook the specific needs and unique challenges faced by individual schools. Their findings emphasize that without input from frontline educators, policies may not be as relevant or applicable to local contexts, leading to challenges in their execution. Anderson and Clark (2018) contended that top-down decision-making can be a vital tool for ensuring uniform standards across large and diverse educational systems. Their study shows that when central leadership provides clear guidelines and expectations, schools can operate more efficiently, particularly in resource-limited environments.

Moreover, top-down decision-making can be particularly effective in situations that require swift action. Martinez et al. (2020) pointed out that in the case of emergency or crisis management, top-down decision-making allows for a coordinated, rapid response. Their research demonstrates that during instances like natural disasters or unexpected disruptions, top-down approaches enable educational systems to act quickly and decisively to protect students and staff. In Rivers State, where the education system is often marked by a lack of cohesion and inconsistent management practices, top-down decision-making could be useful in ensuring that there is a clear direction and policy implementation across public senior secondary schools. The challenge, however, lies in balancing the need for centralization with the need for stakeholder engagement, ensuring that decisions are made efficiently while still considering the perspectives of teachers and parents.

Consensus Decision-Making and Effective Management

Consensus decision-making is a collaborative approach where all members of a group work together to find solutions that everyone can support, even if the outcome is not ideal for everyone. This method prioritizes open dialogue, compromise, and mutual understanding, which

can lead to more inclusive and sustainable decisions. In educational settings, involving all stakeholders in the decision-making process can build a shared vision and foster cooperation, eventually increasing the likelihood of successful implementation of policies. Johnson and Patel (2018) emphasized that consensus decision-making in schools can enhance the sense of ownership and responsibility among stakeholders. Their research highlights how involving teachers, administrators, and parents in decision-making leads to greater commitment to the decisions made, as all voices are considered in the process. Similarly, Williams (2017) argued that consensus decision-making helps mitigate conflicts by encouraging mutual understanding. They found that when diverse perspectives are incorporated, it can reduce resistance to policies and improve overall school climate, as everyone feels valued and heard.

Consensus decision-making is a valuable approach in creating a collaborative and inclusive school culture. Lee and Walker (2020) highlighted the importance of consensus decision-making in fostering a more participatory school environment. Their study shows that when teachers and administrators work together to reach agreements, the resulting policies are more likely to reflect the needs and realities of both staff and students, leading to stronger support and commitment from all involved. Jackson et al. (2019) cautioned that the process can sometimes become too lengthy, especially in large school systems where reaching full agreement among all stakeholders may take considerable time. Their research suggests that while consensus-building is important, it may not be feasible in urgent situations where immediate action is required.

Consensus decision-making plays a key role in building a unified and cooperative school environment. Takahashi and Yu (2018) emphasized that consensus decision-making can create a sense of community and shared purpose in schools. They argue that this collaborative approach enhances communication among staff members, students, and parents, leading to stronger partnerships and more effective problem-solving. Similarly, Roberts and Zhang (2021) contended that consensus decision-making can increase the accountability of all stakeholders. Actively participating in the decision-making process, each member feels a greater responsibility to contribute to the successful implementation of the agreed-upon policies. Their study found that schools employing consensus-building strategies tend to have better long-term results in areas like student achievement and teacher satisfaction. Consensus decision-making is crucial for fostering trust and collaboration within schools. Martinez and Lopez (2020) suggested that one of the key advantages of consensus decision-making is its ability to create an environment of trust. They found that when stakeholders work together to find common ground, it enhances collaboration and reduces misunderstandings, which eventually leads to more effective implementation of school policies and a stronger sense of community..

In the context of Rivers State, where public senior secondary schools often face social and economic challenges that require creative solutions, consensus decision-making could be an effective strategy. Encouraging dialogue among various stakeholders, such as teachers, parents, and local leaders, will likely lead to more inclusive and widely supported decisions. This approach could help address some of the systemic issues facing schools in Rivers State, such as resource allocation and curriculum development.

Decentralized Decision-Making and Effective Management

Decentralized decision-making is a governance model where authority is distributed across various levels of an organization, allowing local leaders, such as school principals or teachers, to

make decisions tailored to the unique needs of their community. This approach fosters flexibility and responsiveness, making it especially effective in diverse educational systems where local circumstances and challenges can vary significantly. Foster and Nguyen (2018) argued that decentralized decision-making enhances the responsiveness of schools to the unique needs of their student populations. Their study suggests that schools with more decision-making power at the local level can implement policies that are better aligned with the specific context and needs of their students.

Similarly, Martinez and Blake (2019) emphasized that decentralization fosters greater innovation in schools. Granting autonomy to school leaders, decentralization enables the experimentation of new teaching methods and practices, which can lead to more effective solutions tailored to local needs. Their research highlights that this autonomy can lead to significant improvements in student outcomes when leaders are given the freedom to respond to immediate challenges. Decentralized decision-making is an effective way to empower educators and improve school outcomes. Hernandez and Li (2020) argued that decentralization leads to greater teacher empowerment, as educators are involved in the decision-making process. They found that when teachers have a say in how schools are run, they are more motivated and engaged, leading to better educational outcomes for students. Their findings underscore the importance of giving teachers a voice in shaping school policies and practices, ultimately fostering a more committed and effective teaching community. In similar vein, Taylor et al. (2021) highlighted the potential challenges of decentralization, particularly in maintaining consistency across schools. They point out that while decentralized decision-making promotes local responsiveness, it can also create disparities between schools if not carefully managed. Their study suggests that establishing clear guidelines and communication channels can help mitigate these challenges.

Decentralized decision-making fosters a more inclusive and collaborative approach to addressing school challenges. Singh and Patel (2017) asserted that decentralization promotes a more collaborative approach to decision-making, where school leaders, teachers, and even parents work together to address local issues. They argue that this shared decision-making process strengthens the sense of ownership and accountability at the school level, leading to more effective policy implementation. Decentralized decision-making enhances a school's ability to respond to evolving needs and challenges. Davies and Carter (2019) noted that decentralized decision-making enables schools to better adapt to changing educational demands and policies. Their research shows that schools with decentralized authority are more agile and able to adjust their practices quickly in response to new challenges, whether they are academic, social, or economic. More-so, Zhang and Lee (2020) emphasized that decentralization can enhance local accountability, as leaders are directly responsible for the outcomes of their decisions. Empowering local leaders to make decisions, decentralization fosters a culture of accountability and encourages leaders to take ownership of their school’s performance, leading to better overall results.

In Rivers State, where public senior secondary schools face unique local challenges, such as inadequate facilities and regional disparities, decentralized decision-making could offer a valuable solution. Empowering school leaders to make decisions tailored to their specific circumstances would allow for more targeted interventions and effective use of available resources. This approach could help address the educational inequalities prevalent in the region, ensuring that policies are both relevant and responsive to local needs.

Consultative Decision-Making and Effective Management

Consultative decision-making is an approach that involves gathering input from key stakeholders before making a final decision, even though the ultimate authority to make the decision rests with a central figure or group. This method ensures that those who are directly affected by the decision such as teachers, parents, and students have an opportunity to contribute their perspectives. Incorporating diverse viewpoints, consultative decision-making helps create more informed, effective, and widely accepted policies.

Lopez and Green (2018) argued that consultative decision-making is particularly effective in educational settings, as it allows for the integration of feedback from various stakeholders who possess valuable, context-specific knowledge. They found that involving teachers and parents in decision-making processes enhances the relevance and practicality of the policies implemented in schools. Similarly, Kumar and Zhang (2019) emphasized that consultative decision-making helps bridge the gap between school leaders and the broader school community. Soliciting input from students and teachers, school administrators can ensure that their decisions address the real, on-the-ground challenges faced by educators and students. Their study highlights that this involvement can lead to greater satisfaction and support for school policies.

Consultative decision-making plays a vital role in enhancing collaboration and fostering a positive school culture. Wilson (2020) pointed out that consultative processes not only improve the quality of decision-making but also contribute to a more collaborative school culture. The research suggested that when staff and parents feel their opinions are valued, it fosters a greater sense of community and cooperation, which benefits the overall school environment and strengthens relationships within the school community. More-so, Gonzalez and Roberts (2017) highlighted that consultative decision-making can help mitigate resistance to change. When stakeholders are included in the decision-making process, they are more likely to understand the rationale behind decisions and feel ownership of the outcomes. This shared responsibility often leads to smoother implementation of new policies and practices.

Consultative decision-making can enhance decision quality, but it also comes with challenges, particularly in terms of efficiency. Johnson (2019) noted that while consultative decision-making improves the quality of decisions, it can be time-consuming. Their research shows that, especially in large organizations like schools, gathering feedback from a wide range of stakeholders can slow down the decision-making process, making it less efficient when quick action is required. Brown and Clark (2020) argued that consultative decision-making enhances decision legitimacy, which is crucial for long-term success. When school leaders seek input from teachers, students, and parents, it helps ensure that decisions are seen as legitimate and responsive to the needs of the school community. This, in turn, increases the likelihood that the policies will be effectively implemented. Consultative decision-making is crucial for fostering inclusivity and trust within the school community. Singh and Thompson (2021) emphasized that consultative decision-making creates a more inclusive environment where all voices are heard. Their research suggests that this approach not only leads to better decisions but also promotes greater trust between school leadership and the broader school community, strengthening collaboration and support for school initiatives.

In Rivers State, where educational reform is urgently needed to address issues like low academic performance and resource constraints, consultative decision-making could ensure that policies are not only practical but also widely supported. Engaging teachers and parents in the

decision-making process can create a more collaborative environment, making it easier to implement strategies aimed at improving school management and student outcomes.

Collaborative Decision-Making and Effective Management

Collaborative decision-making is a process in which multiple stakeholders, including school leaders, teachers, students, parents, and the broader community, come together to make decisions that affect the school's direction. This approach encourages the sharing of knowledge, expertise, and perspectives, fostering inclusivity, shared ownership, and teamwork. Collaborative decision-making is particularly valuable in education, as it enables the school community to work together toward common goals, enhancing both the process and outcomes. In similar vein, Wang and Liu (2018) emphasized that collaborative decision-making enhances communication and trust among all school stakeholders. Their study found that when teachers and parents work together to make decisions, it leads to stronger partnerships, which in turn support student success and improve school performance.

Collaborative decision-making is key to fostering a sense of ownership and commitment among educators. Martinez and Gomez (2020) highlighted that involving teachers in decision-making leads to greater ownership of policies and a higher level of commitment to implementing them. Their research suggests that when teachers feel that their opinions are valued, they are more likely to adopt new strategies enthusiastically, leading to improved educational outcomes and a more engaged teaching staff. Similarly, Sharma and Singh (2017) argued that collaborative decision-making encourages diversity in problem-solving by integrating a range of perspectives. Their study shows that when decisions are made collectively, the variety of insights and experiences from different stakeholders leads to more innovative and well-rounded solutions that better address the needs of the entire school community.

Collaborative decision-making plays a critical role in ensuring that school policies reflect the needs of the entire community. Carter and Wong (2019) stated that the involvement of students, parents, and teachers in decision-making helps ensure that the policies are more inclusive and responsive to the diverse needs of students. Their research finds that collaborative decision-making helps schools adapt to the unique challenges and opportunities of their communities, leading to better educational practices and outcomes. More-so, Kim and Lee (2018) pointed out that collaborative decision-making leads to a shared sense of responsibility, which improves overall school performance. Their study found that when stakeholders contribute to decision-making processes, they are more committed to achieving the school's goals, fostering a more cooperative and productive school environment.

Collaborative decision-making strengthens the partnership between schools and the broader community. Gonzalez and Wang (2020) argued that this approach also empowers parents and community members, making them active participants in shaping the educational experiences of students. They suggest that by working together, schools and communities create stronger networks of support, which positively influences student achievement and well-being, fostering a more holistic and supportive learning environment. Harrison (2019) emphasized that collaborative decision-making builds a stronger school culture by promoting teamwork and mutual respect. The research shows that when school leaders engage with teachers, students, and parents in decision-making, it strengthens relationships and helps to create a more supportive and positive school environment.

In the context of Rivers State, collaborative decision-making offers a powerful strategy for managing the challenges faced by public senior secondary schools. With issues such as low student performance, inadequate infrastructure, and insufficient resources, fostering collaboration among teachers, parents, and community members can create more tailored solutions that address the local context. The active involvement of all stakeholders can lead to a more engaged and motivated school community, working together to ensure that educational goals are met.

Strategic Decision-Making and Effective Management

Strategic decision-making is a long-term, goal-oriented approach in which school leaders carefully consider both internal and external factors to make decisions that align with the school's mission and vision. It involves evaluating current conditions, anticipating future challenges, and ensuring that decisions contribute to the sustainable growth and development of the school. In education, strategic decision-making includes resource allocation, curriculum planning, staff development, and long-term infrastructure planning to ensure the continued success of the institution. Chang and Liu (2017) argued that strategic decision-making allows schools to proactively address potential challenges by aligning their policies with long-term goals. Their research shows that when schools make decisions with a clear understanding of future needs, they are better able to anticipate and navigate changes in the educational setting, leading to more sustainable success.

Similarly, Thompson and White (2018) highlighted the importance of strategic decision-making in adapting to shifting educational demands, such as changing curriculum standards or technological advancements. Their study suggests that schools that engage in strategic planning are better positioned to integrate innovations that improve student learning outcomes and teacher effectiveness. Strategic decision-making is crucial for ensuring long-term stability and effective resource management in schools. Clement (2019) stressed that strategic decision-making is essential for resource management, arguing that schools that engage in long-term planning for resource allocation, including finances and staffing, are better able to maintain stability and support the needs of students despite external challenges such as budget cuts or fluctuating student enrollment. This approach helps schools remain resilient and focused on their educational goals. Roberts and Harris (2020) noted that strategic decision-making also plays a critical role in fostering a positive school culture. They found that when leadership focuses on long-term goals, such as developing staff capabilities or improving infrastructure, schools are more likely to foster a strong sense of community and purpose among teachers, students, and parents.

Strategic decision-making plays a key role in addressing staffing challenges within schools. Kelvin (2021) highlighted the role of strategic decision-making in overcoming teacher shortages and staffing issues. The study suggested that schools that engage in forward-thinking decision-making can better plan for staffing needs, ensuring that they attract and retain high-quality teachers, even in challenging environments. This proactive approach helps schools maintain a strong, capable teaching workforce. Newman (2019) emphasized that strategic decision-making in schools is key to effective leadership and organizational growth. Aligning their decisions with the school's mission and vision, school leaders can ensure that their policies and practices are purposeful and contribute to the long-term success of the institution. Strategic decision-making is essential for schools to remain adaptable in a constantly changing educational

landscape. Morris and Chang (2020) argued that strategic decision-making allows schools to foster an adaptive learning environment that can respond to both external changes (such as shifts in governmental policy) and internal shifts (such as changes in student demographics). Their research shows that strategic planning helps schools remain flexible and responsive to both anticipated and unforeseen challenges, ensuring that they continue to meet the evolving needs of their students.

In Rivers State, public senior secondary schools face a range of challenges that require strategic thinking and planning. With many schools struggling with inadequate infrastructure and limited funding, strategic decision-making can provide a framework for making more effective use of available resources. The long-term benefits of strategic decision-making in Rivers State's educational system could include improved infrastructure, better-trained teachers, and more effective curricula that meet the needs of students in a rapidly changing world.

Contingency Decision-Making and Effective Management

Contingency decision-making is an adaptive, flexible approach where decision-makers respond to changing conditions, unexpected events, or crises. This approach requires school leaders to be responsive to immediate needs and make quick, informed decisions that address short-term challenges, all while ensuring long-term goals are not compromised. Contingency decision-making is particularly critical in educational settings during disruptions such as natural disasters, economic instability, or sudden changes in government policy. Bruce and Simeon (2017) suggested that contingency decision-making is crucial for maintaining stability in times of uncertainty. Their research indicates that schools that implement contingency planning are better equipped to adapt quickly to unforeseen challenges, ensuring the continuity of educational services and minimizing disruptions for students and staff. Similarly, Austin (2018) emphasized that contingency decision-making allows schools to respond effectively to immediate crises, such as staffing shortages or disruptions in daily operations. The study found that schools with flexible decision-making processes are better able to pivot and continue to provide quality education despite difficult circumstances.

Contingency decision-making is crucial for schools to remain resilient during times of uncertainty. Martinez and Lee (2019) argued that contingency decision-making helps schools maintain resilience in the face of external shocks like economic downturns or changes in government policy. They found that by being responsive and adaptive, schools can continue to prioritize student welfare and educational outcomes even when external conditions are volatile, ensuring that the needs of students are met regardless of external challenges. Contingency decision-making is essential for managing both external and internal challenges in schools. Johnson and Harris (2020) highlighted that contingency decision-making also plays a key role in managing internal crises, such as conflicts within the staff or school closures due to unforeseen circumstances. Their research shows that schools that have contingency plans in place are able to navigate these crises effectively, with minimal disruption to the school community, ensuring that operations continue smoothly even in difficult times. Roberts (2021) stressed the importance of contingency decision-making in crisis management, particularly when schools face natural disasters. The study indicates that schools with clear, flexible decision-making structures are better equipped to protect students, ensure their safety, and continue to provide education even during disasters.

Contingency decision-making is vital for balancing immediate challenges with long-term goals in education. Chen and Wang (2020) argued that contingency decision-making helps educational leaders stay focused on long-term goals while managing immediate challenges. Their research found that schools that integrate contingency planning into their strategic vision can make decisions that support both short-term recovery and long-term educational growth, ensuring a sustainable path forward even during periods of crisis. Clark (2021) emphasized that effective contingency decision-making requires a clear communication strategy. Their study highlights that schools that communicate swiftly and transparently during crises help build trust with stakeholders, ensuring that both staff and students remain engaged and focused on the school's educational mission during difficult times.

For Rivers State, where public senior secondary schools face frequent disruptions in terms of funding, infrastructure, and socio-political factors, contingency decision-making offers a means to manage these uncertainties effectively. With a contingency-based approach, school leaders can develop strategies that allow them to quickly respond to emerging challenges, ensuring that students continue to receive quality education even when resources are limited.

Ethical Decision-Making and Effective Management

Ethical decision-making involves making choices that are morally sound, fair, and just, ensuring that the well-being of all stakeholders is considered. In educational contexts, it is essential that decisions align with values such as equity, fairness, and justice. Ethical decision-making requires school leaders to balance competing interests while maintaining integrity, transparency, and accountability in all their actions.

It is critical for creating a positive school culture based on trust and respect. Martins and Silva (2018) argued that ethical decision-making is crucial in promoting fairness and equality within schools. Their research shows that when school leaders prioritize ethical considerations, they foster an environment where both students and staff feel respected and valued, contributing to the overall success and health of the school community. Similarly, Tan and Lee (2019) highlighted that ethical decision-making can help address issues of inequity by ensuring that all students have access to fair treatment and opportunities. Their study suggests that when school leaders make decisions with ethics in mind, they create a more inclusive environment that supports the success of diverse student populations. Ethical decision-making is crucial for fostering a fair and respectful school environment.

Bennett (2020) emphasized the importance of ethical decision-making in navigating conflicts that may arise within schools. The research suggests that when leaders make ethical decisions, they not only resolve conflicts fairly but also contribute to the development of a school culture where respect for differences is encouraged, ensuring that all voices are heard and valued, and promoting an inclusive atmosphere**.** Fredrick (2021) argued that ethical decision-making enhances trust between the school leadership and the wider school community. The study found that when ethical standards are upheld, students, teachers, and parents are more likely to trust and support the school's leadership, fostering a sense of security and stability within the educational environment. Ethical decision-making is fundamental for maintaining fairness and integrity in educational settings. Martins and Wilson (2018) asserted that ethical decision-making is essential for upholding the integrity of educational practices. Their research found that when school leaders make decisions rooted in ethics, they help ensure that policies are just, support the needs

of marginalized groups, and align with both community values and national standards, ultimately fostering a more equitable and accountable educational environment.

Ethical decision-making plays a crucial role in building a strong and accountable school culture. Adams (2020) emphasized that ethical decision-making fosters a culture of accountability in schools. The study demonstrates that when leaders consistently make ethical decisions, they set an example for students and staff, reinforcing the importance of integrity and responsibility in all school activities, which helps cultivate a positive and respectful learning environment. Wilson and Kumar (2021) noted that ethical decision-making is key to tackling issues like discrimination, bias, and unfair treatment in schools. Their research shows that by applying ethical principles, school leaders can address systemic inequalities and create a more inclusive and supportive educational environment. In Rivers State, where disparities in educational access and resources are evident, ethical decision-making can serve as a guiding principle in addressing these inequalities. School leaders who adopt ethical decision-making practices can work towards ensuring that all students, regardless of background, have equal access to quality education. This approach is crucial in creating a fairer and more equitable educational system that meets the needs of all students in Rivers State's public senior secondary schools.

CONCLUSION

Improving decision-making processes in public senior secondary schools in Rivers State is essential for achieving better educational outcomes. Adopting modern decision-making approaches such as participatory decision-making, evidence-based decision-making, top-down decision-making, consensus decision-making, decentralized decision-making, consultative decision-making, collaborative decision-making, strategic decision-making, contingency decision-making, and ethical decision-making, school administrators can enhance management effectiveness. These approaches promote inclusivity, accountability, and adaptability, which are crucial for responding to the diverse challenges schools face. Although challenges exist, especially in resource-constrained environments like Rivers State, the adoption of these strategies will contribute to improved school management, stronger community involvement, and ultimately, higher educational quality. With continued focus and commitment, these decision-making frameworks can lead to more sustainable and impactful improvements in the educational system.

Suggestions

Based on the exploratory discourse, the following suggestions are made:

- School Administrators should actively engage in participatory decision-making processes to involve teachers, parents, and students in decision-making.
- Government Education Officials must prioritize evidence-based decision-making by investing in data collection and research.
- Principals should implement decentralized decision-making to empower local school leaders to address specific challenges.
- Teachers should participate in consensus decision-making to ensure that decisions reflect collective input.

- School Management Boards must ensure that strategic decision-making aligns with long-term educational objectives.
- Educational Leaders should embrace consultative decision-making by seeking expert opinions on educational reforms.
- Community Stakeholders must foster a collaborative approach to decision-making, ensuring that the entire school community works together towards common goals.
- School Boards should support contingency decision-making to allow for flexibility in responding to unforeseen challenges.
- Parents and Teachers should promote ethical decision-making to ensure fairness and equity in all educational practices.
- Policy Makers must advocate for a framework that incorporates all the above strategies to improve school management and educational outcomes.

SUPERVISORY PRACTICES FOR IMPROVED TEACHER JOB PERFORMANCE IN PUBLIC SECONDARY SCHOOLS IN BAYELSA STATE

Okemute Hope DOVIEME
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper discussed supervisory practices for improved teacher job performance in public secondary schools in Bayelsa State. Education is a key driver of social and economic development, and in Nigeria, particularly in Bayelsa State, the quality of education relies heavily on the effectiveness of teachers. Public secondary schools in Bayelsa face challenges such as overcrowded classrooms, inadequate resources, and limited professional development opportunities. These issues highlight the need for effective supervisory practices to improve teacher performance, support professional growth, and enhance student outcomes. Supervisory practices involve overseeing and guiding teachers to improve their performance. The paper was supported by the Herzberg's Two-Factor Theory of Motivation, developed by Frederick Herzberg**,** which suggests that there are two types of factors that influence job satisfaction and motivation: hygiene factors and motivators**.** According to Herzberg, hygiene factors prevent dissatisfaction, motivators are the key to increasing motivation and job satisfaction. The paper identified potential supervisory practices for improving teacher job performance to include; classroom observations, performance evaluations, feedback mechanisms, mentorship programs, actionable goal setting, regular follow-ups and check-ins, clear communication of expectations, providing emotional support, resource provision, and provision of professional development programs. It therefore concluded that supervisory practices are integral to improving teacher job performance in public secondary schools in Bayelsa State. The paper therefore suggested that School principals' should implement performance evaluations by assessing teachers' subject-specific teaching performance, ensuring that evaluations align with curriculum standards and teaching goals.

Keywords: Supervisory Practices, Improved, Teacher Job Performance, Public Secondary Schools, Bayelsa State.

INTRODUCTION

Education is universally recognized as a catalyst for social and economic development. In the context of Nigeria, particularly in Bayelsa State, the quality of education hinges on the effectiveness of teachers. Teachers are the key drivers of academic achievement, with their performance influencing the intellectual and social growth of students. Public secondary schools

in Bayelsa State face numerous challenges that undermine the quality of teaching and learning, including overcrowded classrooms, inadequate resources, insufficient professional development opportunities, and, in some cases, a lack of structured support systems for teachers. These challenges necessitate the implementation of effective supervisory practices to enhance teacher job performance and foster an environment where educators can thrive, develop professionally, and contribute to improving student outcomes. Supervisory practices, when strategically implemented, serve as vital mechanisms for improving teachers' instructional practices, enhancing their professional growth, and increasing their job satisfaction (Ibara, 2015).

Supervisory practices, in the educational context, can be broadly defined as the systematic process of overseeing and guiding teachers in the performance of their duties. These practices involve a range of activities that include classroom observations, performance evaluations, feedback mechanisms, mentorship programs, actionable goal setting, regular follow-ups and check-ins, clear communication of expectations, providing emotional support, resource provision, and provision of professional development programs (Agi, 2017, Ololube, 2016, Ibara, 2018; Smith, 2022). The core objective of supervision is to improve teacher performance, enhance instructional quality, and ensure accountability within the educational system. Oyedele (2020) emphasized that effective supervision is a cornerstone of educational excellence as it enables school leaders to assess teachers' strengths and weaknesses, facilitate professional growth, and ultimately improve student outcomes. Effective supervisory practices directly influence the motivation, job satisfaction, and professional development of teachers, all of which contribute to improved performance in the classroom. Teachers who feel supported and valued by their supervisors are more likely to exhibit high levels of engagement in their teaching practices, leading to better student outcomes (Jackson, 2020).

Supervisory practices are indispensable for improving the quality of education in secondary schools. They are a key tool for enhancing teacher job performance by providing necessary guidance, feedback, and support. Therefore, understanding and implementing effective supervisory practices that align with the educational objectives of the state are crucial in overcoming these obstacles. This paper will explore the significance of supervisory practices for improving teacher job performance in public secondary schools in Bayelsa State.

THEORETICAL FRAMEWORK

The theory that supports this paper is Herzberg’s Two-Factor Theory of Motivation, developed by Frederick Herzberg in 1959, as cited in Ololube (2016). Herzberg’s Two-Factor Theory of Motivation has become a foundational concept in understanding job satisfaction and employee motivation in various sectors. Known also as the Motivation-Hygiene Theory, Herzberg's theory differentiates between two types of factors that influence job satisfaction and dissatisfaction: motivators (intrinsic factors) and hygiene factors (extrinsic factors).

According to the theory, job satisfaction and dissatisfaction are not simply opposite ends of the same continuum; instead, they are influenced by distinct sets of factors. Motivators, when present, lead to higher job satisfaction, while hygiene factors, although necessary for a baseline level of satisfaction, do not inherently motivate individuals but their absence can lead to dissatisfaction (Ololube, 2016). Motivators (Intrinsic Factors) are factors that contribute to higher levels of job satisfaction and motivation. Motivators foster intrinsic satisfaction and encourage employees to work harder, thus improving job performance. Some key motivators include achievement, recognition, work itself, responsibility, advancement, and personal growth.

Hygiene Factors (Extrinsic Factors) are factors that do not directly lead to higher satisfaction or motivation when present, but their absence can result in dissatisfaction. Hygiene factors include company policies, supervision, salary, working conditions, job security, relationships with peers, and work-life balance (Herzberg, 1959 cited in Ololube (2016).

In the context of supervisory practices for improving teacher job performance in public secondary schools in Bayelsa State, Herzberg's Two-Factor Theory offers valuable insights into how supervisors can influence teacher motivation and job satisfaction. Teachers, like any other employees, are motivated by both intrinsic and extrinsic factors and effective supervision can address these factors to improve teacher performance and satisfaction. Applying Herzberg's theory, supervisors can create an environment that fosters both motivation and satisfaction while minimizing dissatisfaction. Supervisory practices that incorporate intrinsic motivators can significantly improve teachers' job satisfaction and motivation. Teachers who are recognized for their efforts and achievements are more likely to feel valued, which in turn motivates them to perform better.

In Bayelsa State, school supervisors can implement recognition systems that celebrate teacher achievements, such as awards for outstanding teaching or academic improvements in students. Recognition can come in many forms, such as public acknowledgment in school meetings, award ceremonies, or even verbal praise. Such recognition boosts teachers' self-esteem and encourages them to maintain high standards in their teaching. Moreover, providing teachers with opportunities for professional development is a key motivator. Supervisors in Bayelsa State can organize workshops, seminars, and training programs that help teachers enhance their skills, stay updated with educational trends, and grow professionally. These opportunities are essential as they contribute to teachers' sense of personal growth, professional development, and career progression, all of which increase job satisfaction and performance. While motivators are essential, hygiene factors must also be addressed to ensure that teachers are not dissatisfied, as dissatisfaction can detract from their performance. In Bayelsa State, teachers are likely to feel discontent if they lack access to necessary resources, such as textbooks, teaching aids, or adequate classroom facilities. Supervisors must ensure that these basic needs are met by providing adequate teaching materials, classroom technology, and necessary resources. Addressing these hygiene factors, supervisors can prevent dissatisfaction, which would otherwise negatively impact teachers' ability to perform at their best.

CONCEPTUAL CLARIFICATION

Supervisory Practices

Supervisory practices encompass a wide range of strategies and activities designed to support teachers in their professional roles, foster growth, and ensure that teachers perform optimally within the school system. In the educational setting, supervision is often seen as the process by which educational leaders and administrators ensure that teachers are fulfilling their responsibilities effectively and providing the best possible learning experiences for students. It is also an essential element in developing a supportive and empowering work environment that nurtures teachers' skills and capabilities, which directly influences their performance and job satisfaction. Ololube (2016) defined supervisory practices as the strategies employed by school administrators to guide, support, and evaluate teachers to enhance their job performance and ensure the achievement of educational goals. He viewed supervision as not only a means of

monitoring but also a way of fostering the development of both teachers and students through regular assessments and constructive feedback.

In a similar vein, John and Gideri (2020) described supervisory practices as a framework of systematic strategies designed to monitor, evaluate, and provide ongoing support to teachers, ensuring that their teaching methods align with school objectives. They viewed these practices as integral to improving teaching quality, thereby boosting student outcomes. Moreover, Okpala (2017) defined supervisory practices as the oversight processes through which educational leaders interact with teachers to improve their instructional practices, manage classroom environments, and promote professional growth. He viewed supervision as a collaborative process where feedback mechanisms, performance evaluations, and regular check-ins are key elements that guide the improvement of teacher performance.

Ige and Ajiboye (2018) described supervisory practices as the interventions that school leaders use to assess, monitor, and provide targeted professional development for teachers. They define it as a multi-faceted approach that integrates classroom observations, mentorship programs, and the provision of necessary teaching resources. Similarly, Bruce (2019) defined supervisory practices as the activities through which educational administrators ensure that teachers are delivering high-quality education, including providing feedback, setting actionable goals, and offering emotional support. He viewed these practices as essential in creating an environment where teachers feel motivated and equipped to perform their duties effectively.

Onuoha and Ejim (2021) viewed supervisory practices as a crucial mechanism for ensuring accountability and improving the instructional capacity of teachers. Their definition emphasizes the importance of clear communication of expectations, regular follow-ups, and providing continuous support to teachers, particularly in areas such as professional development programs and performance evaluations. These definitions reveal that supervisory practices are not limited to mere observation but are instead a comprehensive set of practices that engage teachers in continuous professional growth. Within the context of public senior secondary schools in Bayelsa State, supervisory practices includes; classroom observations, performance evaluations, feedback mechanisms, mentorship programs, actionable goal setting, regular follow-ups and check-ins, clear communication of expectations, providing emotional support, resource provision, and the provision of professional development programs all play a pivotal role in improving teacher performance.

Classroom observations enable supervisors to assess the teaching methods and effectiveness of teachers in real-time, while performance evaluations offer a formalized approach to measuring teachers' strengths and areas for growth (John & Gideri, 2020). Feedback mechanisms provide a channel for open communication between supervisors and teachers, allowing for the identification of challenges and areas of improvement (Clement, 2019). Mentorship programs, on the other hand, offer teachers guidance and support from experienced colleagues, helping to foster a culture of continuous learning (Okpala, 2017).

Actionable goal setting ensures that teachers have clear targets to strive toward, which contributes to enhanced focus and direction in their professional development (Ajayi, 2023). Regular follow-ups and check-ins help supervisors monitor teachers' progress, identify obstacles, and provide timely support where needed (Ige & Ajiboye, 2018). Clear communication of expectations sets the stage for teachers to understand the standards they need to meet, ensuring consistency and clarity in performance (Onuoha & Ejim, 2021). Providing emotional support is another critical component, as it helps teachers to feel valued, supported, and motivated, reducing burnout and improving job satisfaction (Oyedele, 2020). Resource provision ensures

that teachers have the necessary materials and tools to conduct effective lessons, which is fundamental for achieving high teaching standards (Johnson, 2023). The provision of professional development programs empowers teachers with the knowledge and skills needed to stay up to date with current educational trends, methodologies, and technologies (Smith & Harris, 2022).

Supervisory practices are integral to enhancing teacher performance, as they provide the necessary structure, guidance, and support for teachers to excel in their roles. When implemented effectively, these practices not only help teachers improve their teaching techniques and classroom management but also foster a positive and collaborative work environment.

Teachers' Job Performance

Teacher job performance encompasses the various tasks, responsibilities, and duties that a teacher undertakes to meet educational standards, improve student achievement, and contribute to the academic and social development of students. It includes not only the delivery of subject content but also the management of classroom environments, interaction with students, and the implementation of teaching strategies that promote learning. Effective teacher performance is essential to the educational process, and improving teacher performance requires a comprehensive approach, including the application of appropriate supervisory practices. Supervisory practices such as classroom observations, performance evaluations, feedback mechanisms, mentorship programs, actionable goal setting, regular follow-ups and check-ins, clear communication of expectations, providing emotional support, resource provision, and professional development programs all play a significant role in influencing and improving teacher job performance.

Okoye (2017) defined teacher job performance to the extent to which teachers fulfill their duties and responsibilities effectively, including their ability to engage students in meaningful learning experiences and achieve the academic goals set by the school. He viewed teacher job performance as a measure of how well teachers apply their skills, knowledge, and experience in creating a productive learning environment. In a similar manner, Olanrewaju (2018) described teacher job performance as the ability of a teacher to implement instructional strategies effectively, manage classroom dynamics, and foster positive relationships with students, which directly impacts student outcomes. He viewed it as a combination of teaching skills, classroom management, and the ability to maintain a positive learning environment, all of which contribute to a teacher's overall effectiveness.

Okereke (2020) defined teacher job performance as the extent to which teachers meet the expectations of their job, as outlined in their professional responsibilities, while also demonstrating a commitment to continuous improvement. Who viewed teacher performance not only as a function of the technical skills teachers possess but also as a reflection of their dedication to professional growth, continuous learning, and the development of their teaching practices. Similarly, Essien (2021) described teacher job performance as a measure of the outcomes of a teacher's work, including their ability to plan and deliver lessons effectively, assess student progress, and maintain an environment conducive to learning. He saw teacher job performance as an ongoing process that evolves as teachers adapt their methods and strategies to meet the needs of their students and the educational system.

Odu (2019) viewed teacher job performance as the manifestation of a teacher's efforts to improve the academic achievement of their students, the quality of their teaching, and their

ability to contribute to the broader goals of the educational system. Who defined it as a holistic approach to teaching that involves instructional competence, effective classroom management, and active participation in professional development activities. Idowu and Babajide (2020) viewed teacher job performance as the degree to which teachers effectively implement curriculum objectives and promote student learning through innovative teaching methods and assessments. They described it as the outcome of teacher commitment, skill development, and the ability to create an engaging and effective learning environment. Fola and Adebola (2022) defined teacher job performance as the combination of both cognitive and emotional aspects of teaching, where teachers must not only possess the knowledge and skills to teach but also be able to motivate and inspire students to achieve their full potential. They saw teacher job performance as encompassing both technical competence and the emotional connection teachers create with their students, which influences students' engagement and learning outcomes.

Teacher job performance is influenced by a variety of factors, many of which are directly related to the supervisory practices in place at schools. Supervisors who regularly engage in classroom observations can assess how teachers implement instructional strategies, manage classrooms, and address student needs, providing critical insight into areas for improvement (Amadi & Olusegun, 2021). Performance evaluations, which allow for an objective assessment of a teacher's effectiveness, are another crucial tool in improving teacher performance (Olanrewaju, 2018). Feedback mechanisms are essential for teachers to receive constructive input on their teaching practices, allowing them to refine and adjust their strategies to better serve their students (Alabi & Okereke, 2020).

Mentorship programs also play a significant role in enhancing teacher job performance by offering teachers guidance and support from experienced colleagues who can help them navigate challenges and improve their teaching techniques (Essien, 2021). Furthermore, actionable goal setting ensures that teachers have specific, measurable, achievable, relevant, and time-bound objectives that align with their professional development and student achievement (Nwankwo & Odu, 2019). Regular follow-ups and check-ins provide continuous support and accountability, ensuring that teachers are progressing toward their goals and receiving the necessary assistance to overcome any obstacles they encounter (Idowu & Babajide, 2020). Clear communication of expectations helps teachers understand what is expected of them and aligns their efforts with the school's mission and educational standards (Fola & Adebola, 2022).

Providing emotional support is equally important, as it helps teachers feel valued, reduces burnout, and encourages them to remain motivated and focused on improving their performance (Amadi & Olusegun, 2021). Resource provision, including teaching materials and technological tools, ensures that teachers have the necessary resources to conduct effective lessons and facilitate meaningful learning experiences for students (Okoye, 2017). The provision of professional development programs enables teachers to stay updated with the latest teaching methodologies and educational trends, ensuring that they continue to grow in their profession and enhance their job performance (Okereke, 2020).

When these practices are systematically applied, they help teachers not only enhance their teaching skills but also foster a positive learning environment, ultimately leading to improved student outcomes and greater success in the educational system. In the context of public senior secondary schools in Bayelsa State, addressing the key variables that impact teacher performance through effective supervision can lead to significant improvements in the quality of education.

POTENTIAL SUPERVISORY PRACTICES FOR IMPROVED TEACHER JOB PERFORMANCE

Classroom Observations for Improved Teacher Job Performance

Classroom observations as supervisory practice are widely recognized as an essential component of professional development and teacher performance improvement. Through these observations, administrators and supervisors have the opportunity to directly engage with teaching practices, monitor classroom dynamics, and evaluate teacher-student interactions. Hall and Hord (2018) emphasized that the regularity of classroom observations plays a critical role in identifying both the strengths and weaknesses within a teacher's instructional methodologies. This consistent evaluation process enables a more refined understanding of teaching strategies, offering immediate feedback that encourages teachers to make adjustments where needed. Classroom observations play a crucial role in providing valuable insights for instructional improvement.

Kuster and Hardy (2019) found that classroom observations provide supervisors with practical and actionable insights into the instructional practices within their schools. These observations guide teachers toward implementing evidence-based approaches, fostering an environment of continuous improvement. By providing constructive feedback during these evaluations, supervisors can also help to establish and reinforce best practices that enhance both teacher effectiveness and student outcomes. The continuous nature of classroom observations is vital for monitoring long-term teacher development. As Glickman et al. (2017) further highlight, the ongoing nature of these observations allows administrators to track the progress of teachers over time, ensuring that the interventions or support mechanisms put in place are indeed effective in improving teaching quality.

Classroom observations also provide an opportunity for teachers to engage in self-reflection and growth. Ross (2020) emphasized that classroom observations can serve as an invaluable reflective tool for teachers. Receiving personalized feedback and engaging in reflective practices, teachers are better equipped to analyze their performance, identify areas for growth, and make adjustments that enhance their overall instructional effectiveness. These reflective practices foster an atmosphere of collaboration rather than one of judgment, creating a professional environment where teachers feel supported in their journey toward continuous improvement. Classroom observations, when framed as an opportunity for professional development, foster open communication and collaboration.

Johnson and Kline (2021) stressed that when classroom observations are framed within a context of professional growth rather than evaluation, they encourage a more open dialogue between teachers and supervisors. This dialogue is crucial for cultivating a positive school culture where teachers are motivated to refine their pedagogical practices. Tailoring observation frameworks to meet the specific needs of teachers can significantly enhance the effectiveness of feedback. O'Neil and Jones (2022) noted that structured observation frameworks when tailored to individual teacher needs are particularly effective in maximizing the impact of feedback on teacher development. This personalized approach ensures that feedback is relevant and actionable, ultimately leading to more meaningful improvements in teaching practices.

Classroom observations, when framed as an opportunity for improvement, can create a collaborative and supportive atmosphere that benefits both teachers and students. Supervisors in Bayelsa State can adopt this practice to monitor the continuous development of their teachers, offering targeted, personalized guidance that fosters a culture of growth and improvement.

Performance Evaluations for Improved Teacher Job Performance

Performance evaluations, as a critical component of supervisory practices, provide an objective and systematic approach to assessing teachers' effectiveness in fulfilling their roles. These evaluations serve as a comprehensive tool for measuring a wide range of teacher performance metrics, including adherence to curriculum guidelines, student engagement, the ability to foster a positive classroom climate, and contributions to the broader school community. Owens and Valesky (2018) emphasized that performance evaluations go beyond assessing the delivery of academic content, extending into the realm of how well teachers interact with their students, manage classroom dynamics, and influence the overall school environment. These evaluations, when properly conducted, offer a structured framework for measuring teaching outcomes, enabling administrators to assess not only the effectiveness of individual teachers but also the overall educational practices within a school.

Performance evaluations offer teachers an opportunity to gain valuable insights into their strengths and areas for growth. Ryan and Cooper (2017) argued that these evaluations provide a transparent method for teachers to gain insights into their strengths and areas of potential growth. Through these evaluations, teachers can identify specific aspects of their teaching practices where they excel, as well as areas that may require adjustments or improvement. This transparency creates a clear pathway for continuous professional development, as it allows teachers to take ownership of their own growth, recognize areas for improvement, and actively seek opportunities to refine their practice.

Performance evaluations also serve as an essential tool for both recognizing achievements and identifying areas for growth. Schwartz and Owen (2020) further emphasize, performance evaluations serve as a dual-purpose tool both for recognizing teachers' accomplishments and identifying areas where additional professional development is required. When evaluations are conducted effectively, they provide teachers with clear and constructive feedback that helps them understand what is working well in their classrooms and where improvements are needed. Such feedback not only supports individual teacher growth but also contributes to the improvement of the entire educational institution by addressing any systemic challenges that may arise from ineffective teaching practices. Moreover, when performance evaluations are conducted transparently and fairly, they can serve as powerful motivational tools. Teachers, knowing that they are being held accountable for their teaching outcomes, are often driven to perform at higher levels.

Miller and Blanchard (2019) highlighted that the knowledge that evaluations are transparent and unbiased fosters a sense of responsibility and accountability among teachers. This can lead to increased effort, dedication, and a greater commitment to professional growth, as teachers understand that their performance will be assessed and that there are tangible consequences for their efforts. As a result, teachers are more likely to embrace feedback, make necessary changes, and strive for continuous improvement, ultimately benefiting both their own professional development and their students' learning experiences. Performance evaluations provide administrators with invaluable data that can be used to tailor interventions, such as targeted workshops, training sessions, or mentorship programs, to address specific gaps or weaknesses identified through the evaluation process. This targeted approach ensures that professional development resources are used effectively and efficiently, addressing the specific needs of individual teachers rather than taking a one-size-fits-all approach. Johnson and Smith (2021) stated that such interventions, when aligned with evaluation results, are more likely to

yield positive outcomes, as they directly respond to the unique challenges teachers face in their classrooms. In this way, performance evaluations not only assess current teaching practices but also serve as a tool for guiding future instructional improvements.

Performance evaluations also contribute to creating a culture of collaboration and reflective practice among teachers. Harris and Thompson (2022) note that performance evaluations can play an important role in fostering a culture of reflective practice within schools. Encouraging teachers to engage in self-assessment and peer feedback, evaluations create opportunities for professional dialogue, where teachers can learn from one another and share strategies that work. This collaborative approach to professional development helps build a more cohesive and supportive school culture, where teachers feel empowered to continuously refine their practice in the best interest of their students. In the context of public secondary schools in Bayelsa State, incorporating thorough and fair performance evaluations can play a pivotal role in improving the quality of instruction. Identifying teacher-specific needs and offering tailored professional development opportunities, these evaluations can directly contribute to ongoing improvements in teaching effectiveness. Smith and Richards (2023) explained that when performance evaluations are thoughtfully implemented, they lead to sustained improvements in teacher quality, which in turn drives better student learning outcomes. Therefore, a comprehensive and fair performance evaluation system can create a supportive environment where teachers are continually motivated to improve their teaching practices, thereby benefiting the entire school community.

Feedback Mechanisms for Improved Teacher Job Performance

Feedback mechanisms are critical supervisory practices, offering teachers continuous support and the opportunity to reflect on their practices. As a pivotal tool for teacher development, feedback plays a central role in improving instructional quality and enhancing student outcomes. Hattie and Timperley (2017) emphasized that effective feedback provides teachers with the information they need to assess their strengths and weaknesses. Regular and meaningful feedback helps teachers identify areas that need attention while also providing the necessary guidance for improvement. This iterative process of receiving feedback, reflecting on it, and applying changes fosters a cycle of continuous growth, allowing teachers to refine their teaching methods over time.

Feedback plays crucial role in helping teachers improve their practices when it is delivered effectively. Black and Wiliam (2018) asserted that feedback must be timely, specific, and actionable for it to be truly effective. Teachers benefit from feedback that is not only immediate but also detailed and actionable, so they can make targeted improvements in their practices. This type of feedback helps teachers understand what they are doing well, which elements of their teaching are effective, and where they need to focus their efforts. Constructive feedback, which emphasizes both strengths and areas for growth, is essential for creating an environment where teachers feel encouraged to make changes, explore new methods, and engage in professional development. It is the specificity and clarity of feedback that make it a powerful tool for improving teaching practices and, ultimately, student learning outcomes. Implementing a robust feedback mechanism is crucial for fostering a learning culture within schools, where teachers continuously strive for improvement.

Harris and Goodall (2020) stated that a well-structured feedback mechanism helps to build a professional community among teachers, where reflection and collaboration become

central to their daily practice. In this environment, teachers feel empowered to reflect on their performance, learn from their mistakes, and share their successes with peers. This collaborative approach to feedback encourages teachers to seek guidance from colleagues, leading to a more cohesive and supportive school culture. Regularly engaging in reflective practices and receiving feedback, teachers can develop a deeper understanding of their teaching styles, making them better equipped to address the diverse needs of their students.

Feedback mechanisms, when integrated into daily teaching routines, also allow teachers to take responsibility for their own professional growth. Chen et al. (2021) explained that the ongoing cycle of receiving feedback and acting upon it builds teacher efficacy and confidence. Teachers who are regularly given the opportunity to reflect on their practices and improve them are more likely to feel a sense of agency over their professional development. These teachers tend to take a more proactive approach to their teaching, seeking out professional development opportunities and experimenting with new strategies in the classroom. This sense of ownership is crucial for fostering a growth mindset, as it encourages teachers to view challenges as opportunities for improvement rather than as setbacks. Moreover, regular feedback creates an open dialogue between teachers and administrators, strengthening the relationship between the two parties.

Nierle and Owens (2022) noted that feedback sessions that are constructive and based on mutual respect can lead to a more positive and productive relationship between teachers and their supervisors. Teachers are more likely to be receptive to feedback if they feel supported and understood by their administrators. This supportive relationship creates a foundation for open communication, allowing teachers to express concerns, share successes, and seek advice. When supervisors provide consistent and constructive feedback, they not only help teachers improve their skills but also create a more positive school environment, where teachers feel valued and motivated. Furthermore, feedback mechanisms are particularly important in addressing the unique challenges teachers may face in different educational contexts. In regions like Bayelsa State, where teachers may face a variety of instructional challenges, feedback becomes an essential tool for tailored professional development. Osuji (2020) stressed that supervisors can use feedback mechanisms to identify specific challenges faced by teachers, such as issues with classroom management, lesson planning, or adapting to diverse learning styles. Providing regular, actionable feedback, supervisors can offer targeted support that directly addresses these challenges, improving the overall quality of teaching in the region.

Feedback mechanisms are indispensable for improving teacher job performance. They provide teachers with the insights and guidance necessary to refine their teaching practices, foster a culture of reflection and collaboration, and ultimately enhance the learning experience for students. As feedback is integrated into daily teaching routines, it becomes a vital tool for continuous professional development, empowering teachers to take ownership of their growth. In Bayelsa State, as elsewhere, supervisors can enhance teacher performance by providing regular, clear, and actionable feedback that supports teachers in their efforts to improve their instructional methods and adapt to the needs of their students. This approach leads to a more effective, motivated, and professional teaching workforce, ultimately benefiting the broader educational community.

Mentorship Programs for Improved Teacher Job Performance

Mentorship programs are vital supervisory practices in fostering teacher development, offering valuable opportunities for less experienced educators to receive guidance, feedback, and support from more seasoned colleagues. Such programs are essential for nurturing professional growth, as they connect novice teachers with mentors who provide practical advice, emotional encouragement, and essential teaching strategies. Kram (2018) emphasized the significant role mentorship plays in the professional development of teachers, showing that it enhances their job satisfaction, teaching effectiveness, and overall career longevity. As experienced mentors guide less experienced teachers, they offer insights into classroom management, curriculum planning, and instructional strategies, which are crucial to the development of new teachers.

The positive effects of mentorship are not just limited to the direct support that mentors provide, but also extend to the creation of a supportive community within the school. Johnson and Kardos (2020) stated that mentorship helps foster a sense of belonging and support among teachers, particularly in the early stages of their careers. New teachers often experience feelings of isolation, stress, and overwhelming pressure, and mentors can be key figures in alleviating these challenges. With mentors offering advice on how to handle difficult situations and providing emotional support during challenging times, mentorship programs help reduce teacher burnout and turnover rates. Building relationships grounded in trust and mutual respect, these programs create a supportive environment where teachers feel motivated, confident, and engaged in their work. Mentorship programs also provide teachers with a network of professionals with whom they can collaborate, share resources, discuss strategies, and seek emotional support.

Brock and Grady (2019) noted that mentorship programs allow novice teachers to gain access to valuable networks that strengthen the teaching community. These professional networks encourage ongoing collaboration, as new teachers learn from more experienced colleagues who are willing to share their expertise. Such networks offer new teachers a wealth of resources, including lesson plans, teaching strategies, and classroom management techniques, which help them refine their practices and grow as educators. As teachers gain confidence in their abilities and receive practical support, they are more likely to remain in the profession, reducing the likelihood of early career attrition. Mentorship programs enhance teachers' skills in key areas of instructional practice, such as curriculum design, classroom management, and student engagement. Smith and Ingersoll (2020) suggested that teachers involved in mentorship programs demonstrate improved performance in these areas, as they are provided with personalized guidance on how to apply best practices in their classrooms. Mentors serve as role models, offering novice teachers strategies and techniques that have proven successful in creating positive and effective learning environments. Over time, the accumulation of skills and knowledge through mentorship enables new teachers to deliver higher-quality instruction, positively impacting student learning outcomes.

In Bayelsa State, where teachers may face unique challenges related to resources, student diversity, and professional development opportunities, establishing strong mentorship programs can be an effective way to address these concerns. Pairing new teachers with experienced mentors who understand the specific challenges of the region, such programs can provide teachers with the tools and support they need to thrive in challenging school environments. Mentorship programs can help retain skilled teachers by providing them with a sense of professional community and opportunities for growth within the system. Zhao et al. (2021) stressed that mentorship is particularly effective in retaining teachers in regions with high levels

of educational disparity, as it gives teachers the confidence and skills they need to overcome obstacles and make a meaningful impact in their schools. Furthermore, mentorship programs can help build leadership capacity within schools.

Carter and Hawkins (2022) asserted that experienced mentors have the opportunity to develop their leadership skills as they guide and support new teachers. This dual benefit where both the mentor and mentee develop professionally can help to build a culture of shared leadership in schools, where teachers feel empowered to take on leadership roles within the school system. Such shared leadership can lead to improvements in teaching practices across the entire school, as mentors pass on their expertise and guide new teachers toward higher standards of performance.

In Bayelsa State, the implementation of robust mentorship programs can help new teachers build the skills necessary to succeed in their roles and, at the same time, reduce teacher attrition rates by providing ongoing professional development and support. As a result, these programs have the potential to improve teaching quality and student outcomes, while also contributing to the overall sustainability of the educational system.

Actionable Goal Setting for Improved Teacher Job Performance

Actionable goal setting plays a pivotal role in improving teacher performance by providing a structured framework for personal and professional growth. It involves the establishment of specific, measurable, achievable, relevant, and time-bound (SMART) objectives that guide teachers toward their desired outcomes. Locke and Latham (2019) highlighted that goal setting significantly enhances performance across various sectors, including education, by giving individuals clear targets and milestones to work toward. For teachers, well-defined goals provide direction, allowing them to align their efforts with both their professional development needs and the learning needs of their students. When teachers have specific objectives to achieve, they are more likely to stay focused, motivated, and committed to continuous improvement.

Goal setting is a crucial aspect of teacher development. McLean and Ziegler (2020) noted that the process of setting well-structured goals is particularly beneficial for teachers, as it not only motivates them to strive for higher standards but also serves as a tool for supervisors to assess progress and provide targeted support. Through goal setting, teachers can identify key areas for growth and development, whether it's improving specific instructional techniques, enhancing classroom management, or fostering better student engagement. Furthermore, actionable goal setting helps teachers prioritize areas of focus based on their immediate needs and long-term professional aspirations. It allows them to work toward specific milestones that are aligned with both personal growth and broader educational objectives. Higgins and McAllister (2021) stressed that goal setting also helps align teachers' efforts with the school's institutional goals, fostering a sense of shared purpose and collaborative achievement. When teachers' individual goals align with the collective objectives of the school, it creates a cohesive and unified educational environment where everyone is working toward the same overarching mission. This alignment not only improves the quality of instruction but also strengthens the sense of community and shared responsibility among staff.

Moreover, setting actionable goals fosters teacher self-reflection, encouraging them to evaluate their strengths and areas for growth. This reflective process is key to improving teaching practices, as it helps teachers recognize which aspects of their approach work well and which areas need adjustment. Locke and Latham (2019) highlight, teachers may set specific

goals to improve student engagement or incorporate more technology in their lessons. Regularly assessing their progress towards these goals, teachers gain a clearer understanding of their professional development journey and are empowered to take ownership of their growth. Furthermore, goal-setting contributes to both teacher satisfaction and performance. Kennedy and Richardson (2022) suggest, teachers who engage in goal-setting practices are more likely to exhibit higher levels of job satisfaction and are less likely to experience burnout. Setting clear goals and achieving them, teachers gain a sense of accomplishment, which boosts their confidence and motivation. This, in turn, positively impacts their performance and retention rates. Goal setting also fosters greater collaboration among teachers, as it allows them to share their objectives, strategies, and progress with colleagues. Williams and Brown (2023) stressed that collaborative goal-setting practices have been shown to enhance the overall effectiveness of teaching teams, as educators can support one another in achieving their goals. Through regular meetings, discussions, and peer feedback, teachers can learn from each other's experiences, share effective strategies, and collectively contribute to the improvement of teaching practices within the school.

In Bayelsa State, the adoption of actionable goal-setting practices can also help address some of the challenges that teachers face, such as low morale or lack of resources, by providing a structured approach to improving their teaching skills and outcomes. Focusing on specific, measurable goals that align with both individual needs and the broader school objectives, teachers are more likely to feel supported, engaged, and motivated to perform at their best. This structured approach to professional development ensures that teachers are continually improving their practices and contributing to a more effective educational environment.

Regular Follow-ups and Check-ins for Improved Teacher Job Performance

Regular follow-ups and check-ins are essential supervisory practices in ensuring that teachers stay on track with their professional development goals and continue to receive the necessary support to excel in their roles. Shuler and Lee (2018) emphasized that follow-up meetings are instrumental in monitoring teachers' progress and providing an opportunity for supervisors to address any concerns that may arise. These sessions allow for timely interventions that can prevent minor challenges from escalating, ensuring that teachers are always equipped with the tools and resources needed to succeed.

Regular check-ins, in this context, do not only help teachers to focus on their goals but also give supervisors a clear view of how effectively support mechanisms are being implemented. Moreover, the importance of follow-up meetings in providing ongoing support for teachers cannot be overstated. Reinke et al. (2019) emphasized that these meetings create opportunities for teachers to receive personalized and timely feedback, ensuring that they have the guidance necessary for continuous improvement. Through regular check-ins, teachers are able to adjust their teaching strategies based on the feedback provided, creating a consistent cycle of growth. These interactions foster a supportive learning environment, where teachers are encouraged to refine their practices, ultimately enhancing the quality of instruction. For instance, teachers may gain valuable insights into integrating more effective classroom management techniques or improving student engagement methods, leading to better overall performance and student outcomes.

Regular follow-ups also play a crucial role in building a sense of accountability among teachers, encouraging them to remain actively engaged in their professional growth. Miller et al.

(2020) stressed that check-ins foster accountability by reminding teachers of their goals and the expectations set by the school. This accountability not only motivates teachers to maintain high standards of performance but also promotes a culture of continuous development within the school. Teachers are more likely to stay committed to their development goals when they know that their progress will be reviewed periodically, and this consistency in assessment can drive sustained improvements in teaching practices.

Furthermore, regular follow-up sessions give supervisors the chance to celebrate teachers' achievements, acknowledge improvements, and offer recognition for their hard work. Johnson and Jackson (2021) noted that positive reinforcement during these sessions helps to build teacher morale and further motivates them to continue striving for excellence. Taking the time to celebrate milestones, supervisors not only reinforce positive behavior but also cultivate a supportive and encouraging school culture. Follow-up meetings are also an ideal opportunity for supervisors to realign goals or identify new areas for professional growth. Harris and Thompson (2022) emphasized that this ongoing realignment ensures that teachers' goals remain relevant to their needs and aligned with broader institutional objectives. The flexibility to adjust goals as necessary helps teachers stay motivated and focused, preventing them from feeling stagnant or disconnected from their professional development journey.

In the specific context of Bayelsa State, implementing regular check-ins would allow supervisors to identify specific areas where teachers may need additional resources or further professional development. This proactive approach ensures that teachers receive continuous support, preventing them from falling behind or losing motivation. Consistently addressing challenges and celebrating progress, Bayelsa State schools can improve teaching quality and contribute to better student outcomes, creating a dynamic environment for both teachers and learners.

Clear Communication of Expectations for Improved Teacher Job Performance

Clear communication of expectations is fundamental supervisory practice to ensuring that teachers understand their roles and responsibilities within the school system. Dufresne (2020) emphasized that when expectations are clearly communicated, teachers are more likely to meet or exceed performance standards. This is because well-articulated expectations provide teachers with the roadmap needed to excel in their roles. Effective communication plays a critical role in shaping school culture and improving overall performance. Pellerin and Dobbins (2019) emphasized the importance of clear communication in fostering a positive school culture. Clear communication minimizes misunderstandings between school leadership and teachers, creating an environment where everyone is on the same page and working towards common goals. This alignment between teachers' efforts and school goals contributes to a cohesive and focused educational environment, which is essential for driving student success. Clear expectations are crucial for teachers' professional growth and performance.

Walker and Malmgren (2020) stressed that having clear expectations allows teachers to monitor their progress, reflect on their practices, and identify areas of improvement. Teachers who have a clear understanding of what is expected of them are more likely to perform at their best, as they can focus on the skills and strategies that will help them meet their professional goals. Teachers who do not fully understand expectations may feel directionless, overwhelmed, or disconnected from the overall mission of the school, which can hinder their performance. This principle is particularly relevant in the context of Bayelsa State, where ensuring clear

communication between supervisors and teachers can eliminate ambiguity and improve overall teaching performance. In many cases, teachers in this region may face challenges related to unclear expectations due to inconsistent communication from school leaders or a lack of structured feedback.

Establishing clear, consistent lines of communication would allow supervisors and teachers to work collaboratively to identify strengths and weaknesses, establish goals, and monitor progress. Johnson and Birkeland (2003) noted that regular communication and feedback from school leaders are critical for improving teacher performance, as they allow teachers to align their efforts with school-wide objectives. More-so, Hattie (2009) stressed that feedback that is timely, specific, and constructive helps teachers understand what they are doing well and where they need to make adjustments. Without clear feedback, teachers may struggle to gauge their own performance and develop the skills needed to thrive in their roles. Thus, clear communication should not only involve setting expectations but also providing regular, actionable feedback to ensure that teachers can continuously improve their practices. Clear communication of expectations also plays a significant role in teacher retention. Grissom et al. (2021) found that teachers who felt they were adequately supported through clear expectations and communication were more likely to remain in the profession. This sense of support not only enhances their job satisfaction but also reduces burnout, which is critical for maintaining a stable and effective teaching workforce.

Clear communication of expectations is an essential component of fostering improved teacher job performance. Teachers who understand what is expected of them are more likely to succeed and contribute positively to the school environment. In Bayelsa State, improving communication between supervisors and teachers will not only help eliminate ambiguity but also provide the structure necessary for teachers to perform at their best. Aligning expectations with school goals and providing consistent feedback, school leaders can ensure that teachers have the support they need to thrive professionally, which ultimately benefits students, schools, and the broader community.

Providing Emotional Support for Improved Teacher Job Performance

Providing emotional support is an often overlooked but crucial element of effective supervision in the teaching profession. Jimmerson et al. (2019) underscored the importance of supporting teachers emotionally, as it has a significant impact on their well-being and job satisfaction. Teachers face unique stressors in their roles, and when these challenges are compounded by a lack of emotional support, their overall performance can suffer. They emphasized that teachers who feel emotionally supported experience reduced levels of stress, which allows them to focus more on their teaching rather than being overwhelmed by emotional or psychological strain.

Emotional support helps to reduce stress, prevent burnout, and build resilience, which are essential for sustaining teacher effectiveness over the long term. Farrell (2018) emphasized that when teachers receive emotional support, they develop a greater sense of psychological resilience, enabling them to navigate the challenges of their profession more effectively. This resilience not only contributes to their well-being but also enhances their ability to provide high-quality education to students, even in the face of adversity. The support teachers receive impacts how they view their roles within the school community, their capacity to maintain a positive attitude toward their work, and their willingness to remain committed to their students and the

school. Teachers who feel emotionally supported are more likely to remain committed to their students and maintain high levels of motivation in their teaching practice (Vance, 2020).

Moreover, emotional support fosters a sense of belonging and community, which is crucial for teachers' professional and personal growth (Markow & Pieters, 2020). When teachers feel that they are part of a supportive network within the school, they are more likely to collaborate with colleagues, share resources, and engage in professional development activities. This sense of community strengthens the school culture and contributes to a more cohesive and effective learning environment. Markow and Pieters (2020) argues that teachers who feel emotionally supported are better able to cope with challenges and maintain a positive outlook on their roles. This support extends beyond mere professional interactions; it also involves creating a caring environment where teachers' emotional needs are acknowledged and addressed, which ultimately leads to improved performance and greater job satisfaction. Providing emotional support is particularly relevant in regions such as Bayelsa State, where teachers may face unique challenges, including resource limitations, large class sizes, and socio-economic pressures.

Teachers in these regions may experience additional stressors that affect their teaching and well-being, making it even more important for school leaders to offer emotional support. This support can take many forms, from offering a listening ear to providing opportunities for stress relief, such as mindfulness workshops or peer support groups. Offering this kind of emotional support can help mitigate stressors, improve overall job satisfaction, and ultimately improve the quality of education in Bayelsa State (Adrian, 2022). Providing emotional support also has a long-term impact on teacher retention. Teachers who receive emotional support are less likely to experience burnout and leave the profession prematurely.

Ingersoll (2001) stressed that teacher attrition is often driven by emotional stress and lack of support, leading many teachers to leave the profession within their first few years. Offering consistent emotional support, schools can help reduce turnover and ensure a more stable and experienced teaching workforce. Emotional support has been linked to improved student outcomes. Teachers who are less stressed and more emotionally supported tend to engage more deeply with their students, creating a more positive and productive classroom environment. Jennings and Greenberg (2009) noted that teachers who are emotionally well-supported are better able to manage classroom behavior, build strong relationships with students, and create a nurturing environment conducive to learning. This, in turn, leads to improved student performance and better educational outcomes.

Providing emotional support is a critical component of improving teacher job performance. Teachers who feel emotionally supported are more likely to experience higher job satisfaction, reduced stress, and better resilience in the face of challenges. This, in turn, leads to improved teaching effectiveness, increased motivation, and greater commitment to their students. In areas like Bayelsa State, where teachers may face unique challenges, offering emotional support can significantly enhance their overall job satisfaction and help mitigate stressors that impact their performance. Fostering a supportive environment, schools can ensure that teachers thrive, ultimately contributing to a more positive and productive school culture.

Resource Provision for Improved Teacher Job Performance

Resource provision is a fundamental aspect of improving teacher job performance, as teachers require adequate teaching materials, tools, and technology to effectively deliver lessons. Teachers are expected to meet the diverse needs of students, and without the necessary resources,

their capacity to do so becomes significantly constrained. Ball and Forzani (2017) noted that access to resources is critical for effective teaching, as it enables teachers to engage students and deliver high-quality lessons. Teachers who have access to textbooks, multimedia tools, and digital resources can enhance the delivery of content, making lessons more engaging and accessible for all students. For instance, the use of interactive technologies and resources helps to cater to different learning styles and foster an inclusive classroom environment.

Without the necessary resources, teachers are limited in their ability to create meaningful learning experiences, which can have a negative impact on student outcomes. Darling-Hammond (2018) argues that a lack of resources can create disparities in educational quality, particularly in underserved areas. In classrooms where resources are scarce, teachers may be forced to rely on outdated materials or traditional methods that may not effectively address the diverse needs of students. As a result, students may not receive the same quality of education as those in better-resourced schools, which can lead to lower academic achievement and disengagement. This highlights the critical role that resource provision plays in ensuring equity in education.

Teachers working in resource-poor settings often experience frustration and burnout due to their inability to adequately meet their students' needs, which, in turn, affects their job satisfaction and performance. Providing resources also enhances teachers' ability to implement innovative teaching methods, which directly influences student learning outcomes. Trujillo and Washington (2020) stressed that teachers who have access to updated resources are better able to incorporate innovative approaches into their teaching. For example, access to digital tools and resources can help teachers integrate project-based learning, collaborative activities, and other student-centered strategies into their lessons. These methods encourage critical thinking, problem-solving, and collaboration among students, which are essential skills for success in the 21st century.

Supervisors must ensure that teachers have access to up-to-date materials and teaching aids to foster an effective learning environment. Kennedy (2019) emphasized that it is not enough to simply provide resources; these resources must also be relevant, accessible, and aligned with curriculum goals. For instance, providing teachers with professional development opportunities on how to effectively use new technologies or teaching aids ensures that they can make the best use of available resources. Regular training and support are necessary for teachers to adapt to new tools and methodologies, helping them stay current in a rapidly changing educational setting.

Resource provision is directly linked to teacher retention. Teachers who are provided with sufficient resources are more likely to remain in the profession, as they feel more supported and capable of providing quality education. Ingersoll (2003) stressed that inadequate resources are a major factor contributing to teacher turnover, as teachers in resource-poor settings often become disillusioned with their ability to meet students' needs. Ensuring that teachers have the resources they need, schools can reduce turnover and maintain a more stable and experienced teaching workforce.

Moreover, Hattie (2009) demonstrated that the quality of resources in the classroom significantly impacts student achievement. The provision of high-quality instructional materials, such as textbooks, learning software, and other teaching aids, allows teachers to deliver more effective lessons that align with students' academic needs. In environments where resources are plentiful and diverse, teachers can tailor their lessons to address various learning styles, improving overall student performance. Resource provision should not be limited to physical materials but should also include access to social and emotional support, as well as time for

collaboration. Jackson and Bruegmann (2009) opined that teachers who have opportunities to collaborate with colleagues and share resources are more likely to improve their teaching practices. These collaborative networks allow teachers to exchange ideas, access additional teaching resources, and develop professionally. Schools that foster collaboration and provide time for peer interactions help build a culture of continuous improvement and support, leading to better teacher performance.

Resource provision is particularly significant for teachers in regions like Bayelsa State, where schools may face unique challenges such as insufficient funding, lack of infrastructure, and limited access to modern educational technology. Addressing these resource gaps can significantly enhance teachers' teaching capabilities and improve student engagement and outcomes. In Bayelsa State, where many schools may struggle with outdated resources or inadequate classroom materials, providing teachers with up-to-date instructional materials, digital tools, and professional development opportunities is essential for improving educational quality. Access to relevant resources not only supports teachers in their day-to-day work but also contributes to their professional growth and job satisfaction. Teachers who feel that they have the tools to do their jobs effectively are more likely to be motivated and perform well.

Provision of Professional Development Programs for Improved Teacher Job Performance

Professional development programs are essential for enhancing teacher competencies, knowledge, and skills, ensuring that teachers are equipped to meet the ever-evolving demands of the educational setting. Desimone (2017) noted that professional development programs offer teachers the opportunity to stay up-to-date with the latest teaching methodologies, educational trends, and technological advancements. In today's rapidly changing educational environment, continuous professional development is not only beneficial but necessary to ensure that teachers remain effective in their roles.

Teachers who regularly participate in professional development opportunities are better positioned to adopt and implement innovative teaching strategies, integrate new technologies, and engage with contemporary educational practices that can improve student outcomes. These programs offer more than just technical skills; they also enable teachers to adapt to shifting educational paradigms and address the diverse needs of their students. Regular professional development opportunities ensure that teachers are continuously improving and adapting to meet the changing needs of students and the educational setting. Timperley (2018) highlighted that professional development helps teachers reflect on their practices, deepen their pedagogical knowledge, and strengthen their classroom management skills. This ongoing process of learning and adaptation helps teachers identify areas for improvement and provides them with the tools they need to refine their instructional practices.

Moreover, these programs contribute to job satisfaction and motivation, as they demonstrate a commitment to teacher growth and career progression. Almeda et al. (2020) argues that providing teachers with opportunities for career advancement through professional development can enhance their intrinsic motivation, resulting in a more engaged and dedicated workforce. When teachers see that their employers are investing in their growth, they are more likely to feel valued and motivated to stay in the profession. This sense of being supported in their professional journeys also reduces feelings of burnout and attrition, which are common challenges in the teaching profession. Professional development programs provide opportunities for teachers to build a sense of community and collaboration with their peers.

Darling-Hammond et al. (2017) explained that collaborative professional development programs allow teachers to work together, share best practices, and provide mutual support. These programs help build a culture of collaboration within schools, where teachers can learn from one another and strengthen their teaching practices. Collaborative learning environments foster a sense of belonging, which is particularly important in settings where teachers may face unique challenges, such as in underserved or rural areas like Bayelsa State.

Teachers who collaborate with their peers can exchange ideas, solve problems together, and engage in ongoing discussions about improving their teaching, which has a direct impact on the quality of education they provide to their students. The impact of professional development is not only limited to the teachers themselves but extends to the broader school community. Kennedy (2016) found that schools that invest in high-quality professional development programs create a positive feedback loop, where improved teacher performance leads to better student outcomes, which in turn enhances the overall school climate. As teachers develop professionally, their students benefit from more engaging and effective lessons, leading to higher academic achievement. This, in turn, strengthens the school's reputation, attracting more qualified teachers and encouraging higher levels of student engagement. The ripple effect of professional development programs is thus felt across the entire educational ecosystem.

Furthermore, providing ongoing professional development plays a crucial role in teacher retention. Teachers who feel that their professional needs are being met through training and development are less likely to leave the profession. Ingersoll (2001) noted that one of the key factors contributing to high teacher turnover is a lack of professional support and development. When teachers are not given opportunities to grow and advance in their careers, they may feel stagnant or undervalued, leading them to seek employment elsewhere. Offering regular and relevant professional development, schools can increase teacher retention rates, which is particularly important in areas like Bayelsa State, where retaining skilled teachers can be challenging due to various factors such as limited resources and remote locations. Hattie (2009) emphasized that teachers who engage in professional development that is aligned with their teaching goals and needs are more likely to implement the knowledge gained from these programs in their classrooms, leading to improved student performance. Professional development programs focused on evidence-based practices, such as formative assessment, have been shown to directly impact student achievement by helping teachers tailor instruction to meet individual students' needs.

Professional development crucial for addressing specific challenges faced by teachers in regions like Bayelsa State, where there may be limited resources, large class sizes, and high rates of teacher turnover. Providing ongoing professional development can help teachers acquire new skills and strategies to manage these challenges effectively. For example, professional development programs focused on classroom management can help teachers in Bayelsa State create more productive learning environments, even in the face of overcrowded classrooms. Similarly, training in the use of technology can help teachers overcome resource limitations and enhance their teaching methods. In such contexts, professional development is not only a means of improving teaching quality but also a tool for addressing systemic challenges and creating more sustainable teaching practices.

CONCLUSION

Supervisory practices are integral to improving teacher job performance in public secondary schools in Bayelsa State. Implementing a combination of strategies such as classroom observations, performance evaluations, mentorship programs, and actionable goal-setting, supervisors can provide targeted support to enhance teacher effectiveness. Regular feedback mechanisms, clear communication of expectations, and emotional support further contribute to a positive and productive work environment. Also, providing adequate resources and professional development opportunities equips teachers with the necessary tools to adapt to the evolving demands of education. Collectively, these supervisory practices create a robust framework for continuous teacher development, leading to improved job performance, better student outcomes, and overall progress in the educational system of Bayelsa State.

Suggestions

Based on the discourse of the paper, the following suggestions are proposed to enhance teacher job performance through effective supervision practices in public secondary schools in Bayelsa State:

- School principals' should implement classroom observations to regularly assess teaching effectiveness and provide teachers with constructive feedback for improvement.
- School principals' should implement performance evaluations by assessing teachers' subject-specific teaching performance, ensuring that evaluations align with curriculum standards and teaching goals.
- Senior teachers or mentor teachers should implement feedback mechanisms by providing teachers with regular, actionable feedback based on classroom performance, helping them improve their teaching techniques.
- Experienced teachers should implement mentorship programs by guiding and supporting less experienced teachers, fostering professional growth and encouraging a collaborative teaching environment.
- School principals' should implement actionable goal setting by helping teachers define specific, measurable, and attainable goals aligned with both their personal development and school objectives.
- Assistant principals' or teacher supervisors should implement regular follow-ups and check-ins to monitor teacher progress toward goals, offering support and guidance as needed to ensure continuous improvement.
- The school principals' should implement clear communication of expectations by setting and regularly reinforcing school-wide and departmental expectations, ensuring that all teachers understand their roles and responsibilities.
- School counselors or psychologists should implement emotional support programs, offering teachers a safe space to address stress, manage challenges, and maintain their well-being.
- School principals' should implement resource provision, ensuring that teachers have access to necessary teaching materials, technology, and classroom supplies to facilitate effective teaching.

- School principals' should implement professional development programs, organizing training, workshops, and seminars that support teachers in staying updated with the latest educational practices and trends.

ABSTRACT

This paper discussed Classroom management and students' academic performance in public senior secondary school in Rivers state. Classroom management has long been recognized as a vital component of educational effectiveness, particularly in public senior secondary schools where diverse student populations, varying educational backgrounds, and socioeconomic factors can create a challenging environment for teaching and learning. Classroom management, when effectively executed, plays a critical role in determining the academic performance of students, especially in public senior secondary schools in Rivers State, Nigeria. These schools often struggle with overcrowded classrooms, inadequate resources, and an inconsistent application of teaching strategies, all of which can hinder student performance. Classroom management refers to the strategies and techniques employed by teachers to maintain order, ensure student engagement, and create a conducive learning environment. The paper was supported by the Operant Conditioning Theory, developed by B.F. Skinner, which posited that behavior is shaped and maintained by its consequences, with positive reinforcement increasing the likelihood of desired behaviors, and negative reinforcement or punishment decreasing undesired behaviors. The paper identified effective classroom management strategies for students' academic performance to include; establishing clear expectations, positive reinforcement, consistent routine, engaging instructional strategies, building positive teacher-student relationships, use of technology in the classroom, classroom organization and space management, providing immediate feedback, encouraging student participation and classroom discipline techniques. It therefore concluded that classroom management is an integral factor influencing students' academic performance in public senior secondary schools in Rivers State. The paper therefore suggested that teachers should implement clear expectations and rules in their classrooms to ensure students understand what is required of them. This approach will help maintain discipline and promote focused academic engagement.

INTRODUCTION

Classroom management has long been recognized as a vital component of educational effectiveness, particularly in public senior secondary schools where diverse student populations, varying educational backgrounds and socioeconomic factors can create a challenging environment for teaching and learning. Classroom management, when effectively executed, plays a critical role in determining the academic performance of students, especially in public senior secondary schools in Rivers State, Nigeria. These schools often struggle with overcrowded classrooms, inadequate resources, and an inconsistent application of teaching strategies, all of which can hinder student performance (Agi, 2017; Williams, 2023). Despite the importance of classroom management, there is still a significant gap in research that directly links classroom management practices to students' academic performance within this specific context.

In Rivers State, the educational system is confronted with numerous challenges that hinder effective classroom management for students' academic success. Factors such as teacher-student relationships, classroom environment, and the degree of instructional discipline are essential elements that influence student learning outcomes. Poor classroom management correlates with increased disruptive behaviors, which, in turn, negatively affect student academic performance (Wilson, 2019). Furthermore, the lack of consistent and strategic classroom management practices in public secondary schools often leads to an atmosphere that is not conducive to learning, thus impacting students' ability to achieve academically (Ololube, 2017). Thus, this paper seeks to explore the relationship between classroom management and students' academic performance in public senior secondary schools in Rivers State.

THEORETICAL FRAMEWORK

The theory that support this paper is Operant Conditioning Theory, developed by B. F. Skinner's (1938) cited in Anderson (2024). The theory posited that behavior is shaped and maintained by its consequences, with positive reinforcement increasing the likelihood of desired behaviors, and negative reinforcement or punishment decreasing undesired behaviors. This theory is particularly relevant in the context of classroom management, where teachers' strategies and interventions can significantly influence student behavior, and, by extension, academic performance.

In the context of Rivers State's public senior secondary schools, the application of Skinner's theory can help address classroom disruptions and foster an environment where students are more likely to engage in productive academic behaviors. Teachers can employ positive reinforcement by rewarding desirable behaviors, such as punctuality, active participation, and academic achievement. Moreover, negative reinforcement can be used to discourage behaviors that hinder learning, such as tardiness or classroom distractions. Creating a classroom atmosphere that consistently reinforces positive academic behaviors, students are more likely to focus on their studies and improve their academic performance (Wilson, 2024). The relevance of Skinner's Operant Conditioning Theory to classroom management is evident in its ability to guide teachers in shaping student behavior through consistent rewards and consequences. This theory underscores the importance of establishing clear behavioral expectations and consistently reinforcing these expectations to create an environment conducive to learning (Ryan & Deci, 2004). In the specific context of Rivers State, where classrooms are often overcrowded and under-resourced, the application of this theory can serve as a practical framework for managing student behavior and improving academic outcomes.

Classroom Management

Classroom management refers to the strategies and techniques employed by teachers to maintain order, ensure student engagement, and create a conducive learning environment. Jones (2017) defined classroom management as the process through which teachers establish and maintain a learning environment that is orderly, respectful, and conducive to the academic development of students. In the context of public senior secondary schools in Rivers State, this definition underscores the importance of creating a structured environment where students can focus on their studies without disruptions. Martin and Sass (2019) described classroom management as a set of behaviors, practices, and decisions that teachers use to guide students' academic behaviors, foster a positive classroom culture, and promote learning. This definition highlights the need for teachers to actively shape student behavior through consistent and intentional practices that encourage academic achievement.

Emmer and Sabornie (2017) emphasized that classroom management involves not only the prevention of disruptive behavior but also the promotion of positive behaviors that support learning and academic success. This view is particularly relevant to Rivers State's public senior secondary schools, where fostering positive behaviors can directly impact students' focus and academic outcomes. Simonsen et al. (2021) viewed classroom management as the process of guiding student behaviors in such a way that supports both the individual learning needs of students and the collective learning environment of the classroom. In Rivers State, where diverse learning needs exist, this approach is crucial for addressing the varied academic challenges faced by students. Henderson and Kesson (2020) asserted that effective classroom management requires teachers to engage students in meaningful learning activities while simultaneously maintaining a high level of discipline and respect for students' diverse backgrounds. This definition highlights the need for teachers to be not only disciplinarians but also facilitators of learning, integrating strategies that resonate with students' cultural and social contexts.In the context of Rivers State's public senior secondary schools, effective classroom management can significantly improve students' academic performance by reducing distractions and promoting student engagement with the curriculum.

Academic Performance

Academic performance refers to the measurable outcomes of a student's learning, often assessed through grades, test scores, and other evaluations. It is a critical indicator used to determine how well a student is progressing in their educational journey and their ability to meet specific learning objectives. Jackson (2017) defined academic performance as the ability of students to meet established educational expectations and demonstrate their knowledge, skills, and competencies in academic subjects through various assessments. This definition highlights that academic performance is not merely about acquiring knowledge but also about demonstrating proficiency and the ability to apply what has been learned in different contexts. It emphasized the importance of assessments whether exams, assignments, or projects in gauging how well students have mastered the content. Academic performance, therefore, becomes a measure of how effectively students meet the prescribed academic standards and how well they can exhibit their understanding of the subject matter.

Perry and Winn (2020) described academic performance as the demonstration of a student's mastery of learning objectives and their ability to apply knowledge to solve real-world problems. This definition emphasized that academic performance is not just about mastering

theoretical concepts but also about the practical application of this knowledge. The definition stressed the evolving nature of education, which increasingly demands that students not only grasp abstract concepts but also utilize them in practical, problem-solving situations. This perspective is especially important in modern educational settings, where the application of knowledge to real-life scenarios is often seen as an essential skill for future success.

Osborne et al. (2019) viewed academic performance as being influenced not only by a student's cognitive abilities but also by a range of external factors such as the classroom environment, teaching strategies, and student motivation. This definition suggests that while individual cognitive abilities play a crucial role in academic performance, other factors are equally important. They argued that a positive classroom environment, where students feel engaged and supported, can enhance academic outcomes. Feldman (2018) defined academic performance as the level of achievement a student attains in relation to the prescribed curriculum standards within a given educational system. This definition focuses on how well students meet the specific expectations set by the educational system. It places emphasis on the prescribed standards and curriculum goals, suggesting that academic performance is a measure of how effectively students achieve those goals. In this context, academic performance is viewed as a benchmark for the success of the educational system itself. Students' achievements are assessed against these standards, and their performance is a reflection of the effectiveness of both the curriculum and the instructional strategies employed within the system.

Williams and Johnson (2021) described academic performance as the outcome of a student's engagement with the curriculum, the quality of the teacher's instruction, and the overall classroom environment. This definition stressed the importance of several interconnected factors in determining academic success. They argue that students who are actively engaged with the curriculum whether through participation in class, completion of assignments, or extracurricular activities are more likely to perform well academically. In addition, the quality of instruction is pivotal: teachers who use effective teaching strategies, provide clear explanations, and encourage critical thinking are better able to facilitate students' academic success. In the specific context of Rivers State's public senior secondary schools, students' academic performance is heavily influenced by the quality of classroom management. Effective classroom management can create an environment where students are able to focus on their studies, remain engaged with the content, and minimize distractions.

Effective Classroom Management Strategies for Students' Academic Performance

Effective classroom management strategies play an instrumental role in improving students' academic performance. The following strategies have been identified as effective for improving students' academic performance in public senior secondary schools in Rivers State:

Establishing Clear Expectations and Students' Academic Performance

Establishing clear expectations is a fundamental classroom management strategy that plays a critical role in shaping the behavior and academic performance of students. Hattie (2016) noted that setting clear, consistent expectations helps students understand what is expected of them in both academic and behavioral contexts. This includes outlining the standards for class behavior, performance on assignments, and participation in discussions. When students know what is expected of them, they are more likely to take responsibility for their actions and outcomes.

Clear expectations provide a roadmap for success, reducing uncertainty and promoting a structured learning environment (Tharp & Gallimore, 2017).

Establishing clear expectations is crucial for fostering an environment where students feel confident in their ability to succeed. Marzano et al. (2017) assert that clear expectations help build student confidence, as they know the criteria for success. This understanding allows students to monitor their own progress and make adjustments in their learning strategies. This approach enhances student autonomy, encouraging greater engagement in their studies. Establishing clear expectations also plays a key role in motivating students to take responsibility for their learning. Johnson and Johnson (2017) highlighted that clarity in expectations allows students to develop a sense of ownership over their academic progress. When students understand the relationship between their efforts and the outcomes, they are more motivated to perform well academically. This sense of ownership encourages students to set personal goals, track their achievements, and engage more deeply with the learning process. Establishing clear expectations also has a significant impact on students' ability to manage their own behavior. Cohen and Ball (2017) found that when students understand what is expected of them, they are better equipped to self-regulate their behavior, which is crucial in large classrooms. Self-regulation contributes not only to students' academic performance but also to their overall personal development. Their findings suggest that when teachers consistently set clear behavioral and academic expectations, students are less likely to become disengaged or disruptive, thus improving the learning environment. This sense of structure and accountability allows students to focus more on their studies and less on external distractions, creating a more conducive atmosphere for learning.

Establishing clear expectations also involves the use of formative assessments to track students' progress. Stiggins and Chappuis (2017) emphasized the importance of formative assessments in reinforcing expectations. They argue that regular feedback on academic progress helps students recognize whether they are meeting the established standards. Through such continuous assessment and feedback, students are more likely to stay on track with their learning goals and academic performance. This process not only ensures that students understand their progress but also helps them make necessary adjustments to stay aligned with expectations. Similarly, Barrell (2017) found that clear expectations are particularly vital in classrooms with students from diverse backgrounds, as these students may not be familiar with the academic and behavioral norms in the school setting. Teachers' clear communication of expectations helps bridge this gap, ensuring that all students understand the standards for success, which in turn promotes inclusivity and fairness in the classroom. In Rivers State, where there may be challenges such as overcrowded classrooms and limited resources, establishing clear expectations is essential. This strategy serves as a solution to these challenges, ensuring that students are aligned with the teacher's goals for the classroom and encouraging a culture of mutual respect and academic diligence.

Positive Reinforcement and Students' Academic Performance

Positive reinforcement is a classroom management strategy that involves rewarding students for exhibiting desirable behaviors. Skinner's cited in Anderson (2023), operant conditioning theory behavior can be shaped by reinforcement, and positive reinforcement can increase the likelihood of desirable behaviors being repeated. In an educational setting, positive reinforcement may involve verbal praise, rewards, or privileges when students engage in positive behaviors, such as participating in class discussions, completing assignments on time, or displaying good classroom

manners. This method can significantly enhance students' academic performance, as they are motivated to perform well in exchange for positive reinforcement (Rutherford et al., 2020).

In public senior secondary schools in Rivers State, positive reinforcement can be particularly beneficial, as students may face numerous external challenges, such as social and economic pressures, which can affect their motivation and engagement. Focusing on rewarding positive behaviors, teachers can create a learning environment that encourages students to work hard and strive for academic excellence. Positive reinforcement can help build students' self-esteem and confidence, as well as increase their intrinsic motivation to succeed academically (Alderman, 2018). Positive reinforcement is most effective when applied consistently, as it helps cultivate a classroom environment that encourages effort and responsibility. Brophy (2017) suggested that positive reinforcement, especially when used consistently, helps develop a classroom culture that values effort and responsibility. He explains that when students know that their positive behaviors are noticed and appreciated, they are more likely to repeat these behaviors and feel more connected to the learning process. This, in turn, can lead to higher levels of student engagement, as they are more motivated to participate and succeed. Positive reinforcement plays a key role in not only improving behavior but also enhancing cognitive outcomes. Lepper and Henderlong (2017) argued that positive reinforcement not only supports behavioral improvement but can also enhance cognitive outcomes. Their research highlights that students who receive praise and rewards for their academic efforts are more likely to engage deeply with the content. Positive reinforcement helps to shift students' focus from external pressures to internal motivations, encouraging them to view learning as both an enjoyable and rewarding experience. This shift can significantly improve academic outcomes, particularly in subjects that students find challenging.

Positive reinforcement can be most effective when it aligns with students' intrinsic motivations, fostering a deeper connection to learning. Deci and Ryan (2004) emphasized the importance of aligning positive reinforcement with students' intrinsic motivation. They suggest that when rewards are tailored to students' personal interests and needs, it can foster a deeper connection to learning and enhance intrinsic motivation. For example, giving students choice and autonomy over how they demonstrate their learning can lead to better engagement and greater academic performance. Positive reinforcement, when used effectively, nurtures a student's internal drive to excel and promotes a sense of self-efficacy in the learning environment. Moreover, positive reinforcement is also crucial in shaping students' mindsets towards challenges and learning.

Dweck (2016) suggested that providing positive reinforcement can help foster a growth mindset, where students begin to view challenges as opportunities for improvement rather than as insurmountable obstacles. This, in turn, can contribute to better academic performance, as students develop a belief in their ability to succeed through effort and perseverance. Encouraging students to embrace challenges with confidence, positive reinforcement can help them develop resilience and persistence, both of which are essential for academic success. In Rivers State, the implementation of positive reinforcement can serve as a valuable strategy to address challenges such as low student morale and engagement. Recognizing and rewarding student achievements, no matter how small, teachers can cultivate an environment where students feel motivated and valued. This, in turn, can lead to an improvement in academic performance and greater overall success.

Consistent Routine and Students' Academic Performance

Consistency in the classroom is an essential element of effective classroom management. A consistent routine provides structure and predictability, which can help students feel secure and focused on their learning. Emmer and Sabornie (2016) stressed that a consistent routine helps to minimize disruptions, as students know what to expect during each part of the lesson. This familiarity allows students to concentrate more effectively on the academic content being taught. When students are aware of the daily schedule and the expectations for each activity, they are better able to manage their time and stay on task, leading to increased academic performance.

The importance of consistency is particularly evident in public senior secondary schools in Rivers State, where diverse student backgrounds and a range of academic abilities can sometimes create a fragmented classroom environment. Establishing and maintaining a consistent routine, teachers can promote a sense of order and discipline, reducing behavioral disruptions that may hinder academic progress (Lammers et al., 2020). Teachers who implement consistent routines also foster a sense of safety and trust in the classroom, which is crucial for effective learning. A consistent routine plays a vital role in helping students manage their behavior and emotions effectively. Bates and Morgan (2017) argued that a consistent routine not only helps to minimize distractions but also strengthens students' ability to manage their behavior and emotions. Adhering to a predictable schedule, students feel more in control of their environment, which in turn promotes emotional regulation and positive behaviors. This emotional stability is crucial, as students are less likely to feel anxious or distracted, allowing them to focus more effectively on learning. A consistent routine also plays a crucial role in fostering student confidence and participation.

Wang et al. (2017) highlighted that the predictability created by consistent routines fosters a sense of security among students, making them more likely to participate actively in classroom activities. Their study found that when students experience a stable and consistent environment, they demonstrate greater confidence and willingness to take academic risks. This results in more meaningful participation, deeper engagement with the content, and, ultimately, better academic outcomes. A consistent routine also contributes significantly to building strong teacher-student relationships. Patterson et al. (2017) emphasized that consistency in the classroom provides the foundation for building positive teacher-student relationships. When students know what to expect from their teachers, including how they will respond to behavior, they feel respected and understood. This builds trust between students and teachers, which is essential for creating an environment where students feel safe to express themselves and take intellectual risks. Such positive relationships also contribute to higher levels of motivation and academic achievement, as students are more likely to invest in their learning when they feel supported by their teachers.

Furthermore, a consistent routine is essential for fostering student engagement and academic success. Arnett and Lee (2019) found that students who are part of structured and predictable routines are more likely to engage in classroom activities and demonstrate improved academic performance. This is because a consistent routine allows students to focus their cognitive energy on the learning process rather than on navigating unexpected changes or disruptions. Such structure not only helps students stay on task but also contributes to their overall development of time-management skills and personal responsibility, both of which are crucial for academic success. In Rivers State, where resource constraints may pose challenges to creating highly dynamic and flexible learning environments, establishing a consistent routine can

provide stability and enhance student focus, ultimately leading to improvements in academic outcomes.

Engaging Instructional Strategies and Students' Academic Performance

Engaging instructional strategies are designed to actively involve students in the learning process and make the content more accessible and interesting. Engaging instruction goes beyond passive learning, such as listening to a lecture, to incorporate activities that require active participation, critical thinking, and problem-solving. Pianta (2017) noted that engaging instructional strategies are directly linked to increased student engagement, motivation, and academic achievement. These strategies include group work, hands-on activities, interactive discussions, multimedia tools, and problem-based learning. The goal of engaging instruction is to make learning enjoyable and relevant, so students are more likely to take an active role in their education (Tomlinson, 2018).

For senior secondary students in public schools in Rivers State, where large class sizes and limited resources may hinder personalized attention, engaging instructional strategies provide a way for teachers to connect with students and make learning more interactive. Brown and Green (2019) found that students who participate in engaging, hands-on learning activities retain information more effectively and develop a deeper understanding of the material. Moreover, engaging instructional strategies can foster collaboration and peer learning, which further enhances student engagement and academic achievement. Engaging instructional strategies are vital for fostering active learning and promoting student success.

Hattie (2017) emphasized that active participation in the learning process, such as through collaborative and inquiry-based learning methods, is one of the most powerful predictors of student success. The research highlights that when students actively engage in their learning through discussion, problem-solving tasks, or exploration, they are more likely to develop a deeper understanding of the content. Engaging instructional strategies play a critical role in enhancing student retention and mastery of content. Guskey (2017) added that providing students with opportunities for active learning is not only important for engagement but also for improving retention and mastery of content. The research suggested that when students are actively involved in the learning process, they are more likely to retain information long-term and demonstrate higher levels of academic performance. Further noted that active learning strategies such as role-playing, debates, and real-world problem solving give students a sense of purpose and agency in their education, which boosts both motivation and performance.

Incorporating technology into instructional strategies can further enhance student engagement and participation. Koh and Hill (2017) argued that using interactive technologies in instruction, such as multimedia presentations and educational software, significantly enhances student engagement. Their study found that technology-driven instruction can provide personalized learning experiences, cater to different learning styles, and create more dynamic and engaging lessons. Incorporating technology, teachers can offer students a wider range of ways to engage with the material, whether through virtual simulations, interactive quizzes, or online collaborative platforms. This, in turn, can lead to increased motivation and a greater sense of ownership over their learning. In Rivers State, adopting engaging instructional strategies can address the challenge of student disengagement, which is common in overcrowded classrooms. Incorporating methods that appeal to different learning styles and interests, teachers can capture students' attention and encourage active participation, leading to higher academic performance.

Building Positive Teacher-Student Relationships and Students' Academic Performance

Building positive teacher-student relationships is a fundamental strategy for enhancing academic performance and fostering a positive learning environment. Hamre and Pianta (2016) found that students who have positive relationships with their teachers are more likely to succeed academically and display positive behavior. These relationships are built on trust, respect, and empathy, where students feel that their teachers genuinely care about their well-being and success. Positive teacher-student relationships create a supportive environment where students feel safe to take risks, ask questions, and make mistakes, all of which are important components of academic growth.

In Rivers State, where students may face personal and social challenges outside the classroom, building positive relationships is particularly important. Teachers who take the time to understand the individual needs and concerns of their students are better positioned to support their academic growth (Araujo, 2021). Building positive teacher-student relationships is crucial for fostering student engagement and academic success. Klem and Connell (2017) highlighted that students who feel supported by their teachers are more likely to engage in class, participate actively, and achieve higher academic results. Teachers who form positive relationships with students can provide better guidance and mentorship, helping students navigate challenges both in and out of the classroom.

Building positive teacher-student relationships has a significant impact on students' emotional well-being and academic success. Pianta et al. (2017) emphasized that strong teacher-student relationships contribute to better emotional regulation in students, which in turn positively affects their academic performance. When students feel emotionally supported and connected to their teachers, they are better able to manage stress and maintain focus in the classroom. They argued that this emotional connection also fosters a sense of belonging, which increases students' motivation and persistence in their studies, ultimately leading to improved academic outcomes. Building positive teacher-student relationships is a crucial factor in fostering an environment that supports academic success. Zinsser et al. (2017) highlighted that when teachers show warmth and responsiveness, students are more likely to exhibit higher levels of academic engagement and performance. These positive interactions also promote a classroom climate that is conducive to learning, where students feel comfortable and encouraged to participate actively in class activities.

Moreover, building positive teacher-student relationships is not only about nurturing a supportive atmosphere but also involves teachers' emotional awareness and management. Jennings and Greenberg (2017) emphasize the importance of teachers' emotional intelligence in building strong relationships with students. Teachers who are emotionally intelligent able to recognize, understand, and manage both their own emotions and those of their students create an environment of trust and mutual respect. Their research indicates that emotionally intelligent teachers are more effective in addressing students' individual needs, which enhances academic achievement. In emotionally supportive classrooms, students are more likely to feel valued, leading to better engagement, improved academic performance, and stronger interpersonal skills.

Building positive teacher-student relationships plays a key role in promoting students' overall academic and personal growth. Rimm-Kaufman and Sandilos (2017) emphasized the importance of teacher-student relationships in fostering academic success, suggesting that students who have positive relationships with their teachers tend to have better problem-solving skills, higher levels of self-esteem, and greater confidence in their abilities. They noted that when

teachers are responsive and approachable, students are more likely to seek help when needed, which contributes to better learning outcomes. These positive relationships, built on mutual respect and understanding, create a sense of security for students, empowering them to take academic risks and challenge themselves. For public senior secondary schools in Rivers State, building strong teacher-student relationships can serve as a solution to challenges such as student apathy and poor academic performance. When students feel valued and supported, they are more likely to invest effort into their studies and strive for success.

Use of Technology in the Classroom and Students' Academic Performance

In recent years, the integration of technology in the classroom has become a key element of modern education. Technology not only supports traditional teaching methods but also provides dynamic ways for students to engage with the content. Smith and Johnson (2017), technology facilitates the development of digital literacy, which is essential for the modern workforce. The use of technology in the classroom includes tools such as interactive whiteboards, educational software, online learning platforms, and digital resources, which enable students to interact with learning materials in innovative ways. When technology is used effectively, it can create an immersive learning experience that encourages active participation and deepens understanding (Williams, 2017).

For students in Rivers State, where access to educational resources can be limited, the introduction of technology offers the potential to bridge learning gaps and bring the classroom closer to the digital age. Lee (2017) found that the integration of online learning tools and multimedia resources enhances students' engagement, helping them to stay focused and motivated. This engagement is facilitated by the interactive nature of online platforms, which provide immediate feedback, personalized learning experiences, and the opportunity for students to control the pace of their learning. Similarly, multimedia resources, such as videos, simulations, and interactive exercises, offer diverse ways for students to connect with the material, catering to different learning styles and reinforcing content in a more engaging manner. As a result, students are more likely to retain information, participate actively in their learning, and demonstrate improved academic performance.

Technology can also support collaborative learning, enabling students to work together on digital platforms, which can foster creativity, critical thinking, and problem-solving skills (Brown & Green, 2017). These platforms facilitate communication, idea-sharing, and teamwork, allowing students to collaborate seamlessly regardless of their physical location. This collaborative approach encourages a deeper understanding of the material as students learn from each other's perspectives and contribute to collective problem-solving. As a result, it enhances students' academic performance, promoting higher-order thinking skills and active engagement in the learning process. However, it is important to ensure that technology is not just used for the sake of novelty but is aligned with the curriculum and learning objectives (Miller, 2017). When technology is thoughtfully integrated into the educational framework, it becomes a powerful tool that supports, rather than distracts from, the intended learning outcomes. Proper alignment ensures that the technological tools enhance the learning experience and contribute meaningfully to student achievement, rather than overwhelming or confusing students with irrelevant content or tasks. Therefore, educators must carefully consider how and when to incorporate technology to maximize its impact on student learning.

In Rivers State, where many students may not have access to resources outside the classroom, the strategic use of technology within the classroom can offer significant academic advantages. Adopting technology as a core component of teaching, schools can create a learning environment where students are more engaged, motivated, and empowered to take control of their learning process.

Classroom Organization/Space Management and Students' Academic Performance

Classroom organization and space management are essential strategies in ensuring an effective learning environment. A well-organized classroom promotes focus, reduces distractions, and encourages positive student behavior. Ferlazzo (2016) emphasized the physical arrangement of the classroom plays a vital role in the management of student behavior and the overall learning experience. An organized classroom has a positive impact on students' ability to concentrate, collaborate, and access resources efficiently. Proper space management involves strategic placement of desks, learning tools, and resources to ensure that students have easy access to the materials they need and that there is enough space for movement and interaction.

In Rivers State's public senior secondary schools, where classrooms are often overcrowded, managing the available space effectively becomes crucial. Smith (2019) found that when teachers create flexible classroom environments that can be adapted to different teaching activities, students are more likely to engage with the learning process. This flexibility allows for a dynamic learning atmosphere, where the classroom layout can be adjusted to support various teaching methods, such as individual work, collaborative group activities, or hands-on learning experiences. Adapting the space to fit the needs of different learning activities, teachers can encourage students to take ownership of their learning, stay engaged, and interact more effectively with their peers and the content. Furthermore, arranging the classroom to facilitate collaboration, with spaces designated for group work, can foster teamwork and improve student outcomes (Bennett & McLeod, 2020).

Proper space management also includes organizing resources such as books, learning materials, and technology so that students can easily access and use them. Classroom organization and space management play a crucial role in shaping the overall learning experience. A well-organized and thoughtfully arranged classroom can positively impact both academic performance and students' emotional and social development. Jones and Liu (2017) highlighted that the physical setup of classrooms can influence not only academic performance but also students' emotional and social development. When students feel that the space is thoughtfully designed and caters to their needs, they are more likely to feel valued and motivated. This emotional connection to their learning environment can boost self-esteem and foster a positive attitude toward school, ultimately leading to better engagement and improved outcomes. Similarly, classroom organization and space management are essential elements in creating an effective and inclusive learning environment. Strategically organizing the physical space, educators can support various teaching methods and accommodate diverse learning needs. Kim and Lee (2018) argued that incorporating varied seating arrangements such as movable desks or comfortable lounge spaces helps to support different learning styles and fosters a more inclusive learning environment. This flexibility allows students to choose seating arrangements that suit their preferred learning styles, promoting comfort and engagement, which can enhance their overall learning experience.

Classroom organization and space management are crucial for promoting an efficient and effective learning environment. A well-structured classroom layout not only aids in academic performance but also supports smooth transitions between different learning activities. Robinson and Sharma (2017) found that classrooms with clear zones for different activities (e.g., reading, group work, individual tasks) support better transitions between activities, reducing downtime and enhancing productivity. Designating specific areas for various tasks, students can easily shift between activities without confusion, allowing for a more streamlined and focused learning experience. Classroom organization and space management also involve considering the overall environment to support students' well-being and academic success. A thoughtfully designed classroom can significantly impact students' mental and emotional health, fostering a positive atmosphere for learning. Thompson and Green (2019) suggested that incorporating natural light and elements of biophilic design in the classroom environment contributes positively to students' well-being, reducing stress and improving concentration levels. Integrating these natural elements, classrooms can become more inviting and conducive to focus, helping students feel more relaxed and engaged in their learning

In Rivers State, this strategy can help address challenges such as overcrowded classrooms and limited access to learning tools. A well-organized classroom can increase student focus and decrease disruptions, leading to improved academic performance.

Providing Immediate Feedback and Students' Academic Performance

Feedback is one of the most effective ways to support student learning and improvement. Immediate feedback, in particular, allows students to understand their mistakes and make corrections in real-time, promoting continuous learning. Hattie and Timperley (2017) stressed that feedback plays a significant role in improving student performance as it helps students identify areas of improvement and reinforces positive behaviors. Immediate feedback, as opposed to delayed feedback, ensures that students receive guidance while the content is still fresh in their minds, making it more relevant and actionable. This type of feedback fosters a growth mindset and helps students see learning as an ongoing process of development rather than a one-time event (Dweck, 2016).

For students in Rivers State, where teachers may have limited time and resources to provide individualized instruction, immediate feedback can help maximize the learning potential of each student. Black and Wiliam (2018) found that when teachers provide feedback promptly, students are better able to retain information, understand concepts, and apply what they have learned. Providing immediate feedback helps teachers track students' progress more effectively, allowing them to adjust their teaching strategies accordingly. Providing immediate feedback is essential for supporting student growth and learning. Johnson and Pearson (2017) emphasized the importance of feedback in helping students build confidence and self-efficacy, which are crucial for sustained academic success. When students receive timely and constructive feedback, they are more likely to engage with the content and believe in their ability to improve. Providing immediate feedback not only helps students improve their performance but also fosters deeper reflection. Gonzalez and Martinez (2018) argued that feedback encourages reflective thinking, allowing students to assess their own learning and make necessary adjustments. This process enhances their ability to recognize strengths and areas for improvement, eventually leading to greater academic growth and a more personalized learning experience.

Moreover, providing immediate feedback is most beneficial when it is both clear and actionable. Lee and Carter (2017) found that feedback is most effective when it is specific and actionable, giving students clear guidance on how to improve their work. This approach helps students understand exactly what they need to do to enhance their skills, promoting more targeted and effective learning. Providing immediate feedback, when paired with a positive learning atmosphere, can significantly boost student motivation. Park and Kim (2019) argued that the combination of timely, actionable feedback and a supportive learning environment leads to enhanced student motivation and better academic outcomes. This synergy not only helps students improve their performance but also encourages them to engage more fully with the learning process. In Rivers State's public senior secondary schools, where student engagement may be influenced by external factors, providing immediate feedback can create a more responsive learning environment. Students will feel supported and motivated, knowing that they can receive guidance as they work through academic challenges. This strategy can contribute to higher academic performance by addressing students' learning needs in real time.

Encouraging Student Participation and Students' Academic Performance

Encouraging student participation is a powerful classroom management strategy that fosters engagement and motivation. When students are actively involved in the learning process, they are more likely to retain information, ask meaningful questions, and engage in critical thinking. Deci and Ryan (2004) emphasized that student participation is closely linked to intrinsic motivation, which is vital for academic success. Encouraging students to participate, teachers can create an environment that values students' ideas and contributions, making the learning process more relevant and enjoyable. Participation can take many forms, including answering questions, engaging in group discussions, presenting projects, and collaborating with peers.

In Rivers State's public senior secondary schools, where there are often large class sizes and diverse learning abilities, encouraging participation can help ensure that every student has an opportunity to contribute. Stipek (2017) noted that active participation enhances students' sense of ownership of their learning and improves academic outcomes. Teachers who foster an inclusive classroom atmosphere, where all students feel comfortable participating, are more likely to see higher levels of academic achievement. Moreover, encouraging participation helps build students' confidence and communication skills, which are essential for success both inside and outside the classroom. Weimer (2020) shows that students who actively participate in the classroom are more likely to feel engaged and motivated to learn. This increased engagement not only enhances their understanding of the material but also fosters a sense of ownership over their learning process.

Active participation encourages students to think critically, ask questions, and connect new information to prior knowledge, all of which contribute to deeper learning and a more positive academic experience. Encouraging student participation is essential for fostering a deeper understanding of the material and enhancing academic performance. Hattie and Timperley (2017) argued that student participation, particularly in peer discussions and collaborative work can significantly enhance both understanding and academic performance. They suggest that when students are encouraged to explain concepts to one another, their own comprehension deepens, leading to improved outcomes. This peer interaction not only reinforces individual learning but also creates a more dynamic and supportive learning environment. Similarly, Topping and Ehly (2017) found that peer-assisted learning strategies, where students

take active roles in teaching and learning from each other, can significantly boost engagement and academic performance.

This type of participation encourages not only knowledge retention but also the development of social and emotional learning skills. Encouraging student participation is crucial for enhancing both learning and academic performance. Chan and Ng (2018) highlighted that students who engage in active participation in class tend to perform better academically because they are able to connect new knowledge with their previous experiences. The continuous engagement leads to better retention and understanding of the subject matter, allowing students to integrate new concepts more effectively and apply them in various contexts.

Encouraging student participation can also be enhanced through the use of technology, expanding opportunities for engagement beyond the traditional classroom. Zhang and Wei (2019) suggested that technology-enhanced participation, such as using online discussion platforms and collaborative tools, allows students to engage in learning beyond traditional face-to-face interactions. This fosters deeper academic engagement and improves learning outcomes, as students can collaborate, share ideas, and reflect on concepts in new and interactive ways. In Rivers State, where many students may face challenges such as limited parental support or low motivation, creating opportunities for active participation can enhance their engagement and improve their academic performance.

Classroom Discipline Techniques and Students' Academic Performance

Classroom discipline is a critical aspect of classroom management that influences students' ability to learn and perform academically. Effective discipline techniques create an environment where students understand the importance of respect, responsibility, and self-control. Emmer and Sabornie (2016) noted that classroom discipline is not about strict punishment but rather about setting clear expectations and maintaining a supportive, structured environment. Discipline techniques include setting boundaries, using positive reinforcement, and addressing misbehavior in a constructive manner. It is also essential for teachers to model appropriate behavior, as students are more likely to emulate behaviors they observe.

In Rivers State's public senior secondary schools, where issues such as overcrowding and socio-economic challenges can contribute to behavioral issues, implementing effective discipline techniques is critical for maintaining an atmosphere conducive to learning. Algozzine et al. (2017) stressed that effective classroom discipline helps reduce disruptions, improve student focus, and increase academic performance. Teachers who establish clear expectations and address misbehavior promptly create a learning environment that supports student success. Classroom discipline techniques are essential not only for maintaining order but also for fostering a positive classroom culture that supports overall student development. Patel et al. (2017) noted that establishing a positive classroom culture through clear expectations can enhance students' social-emotional skills, which in turn supports academic achievement. When students understand the importance of respect and responsibility in the classroom, they are better able to focus on their studies and engage with the material, leading to improved academic performance.

Classroom discipline techniques that promote fairness and consistency are crucial for creating a supportive learning environment. Johnson and Lang (2018) emphasized that a consistent approach to discipline across all students creates a fair learning environment, helping students feel secure and focused on their academic work. When students know what is expected

of them and understand that rules apply equally to everyone, they are more likely to engage positively with their studies and perform better academically. Furthermore, incorporating student input into discipline policies can significantly enhance classroom dynamics and promote a more cooperative learning environment. Lee and Zhang (2019) argued that discipline policies that include student input and cooperation lead to greater respect and fewer disruptions, which positively impact learning outcomes. When students feel that their voices are heard in the establishment of rules and expectations, they are more likely to take ownership of their behavior, leading to a more focused and productive classroom environment.

Implementing culturally responsive discipline techniques is vital for fostering an inclusive and supportive learning environment. Garcia and Wang (2020) found that culturally responsive discipline techniques—those that consider students' backgrounds are more effective in maintaining student engagement and improving academic performance in diverse classrooms. Acknowledging and respecting the cultural differences of students, these techniques help create an environment where all students feel valued and are better able to engage with the learning process, leading to improved academic outcomes. In Rivers State, where many students may come from challenging backgrounds, adopting positive discipline techniques that emphasize respect, consistency, and support can help foster an atmosphere where students feel safe, valued, and motivated to learn. When discipline is managed effectively, students are more likely to engage in the learning process and achieve their academic potential.

CONCLUSION

Classroom management is an integral factor influencing students' academic performance in public senior secondary schools in Rivers State. Teachers who adopt effective classroom management strategies create an environment that fosters academic success by reducing distractions and promoting engagement. This, in turn, helps students stay focused, motivated, and actively involved in their learning. Given the unique challenges faced by educators in Rivers State, such as overcrowded classrooms, limited resources, and diverse student needs, implementing well-researched classroom management techniques can substantially improve student outcomes. Addressing these challenges and fostering a structured, supportive environment, teachers can enhance both academic achievement and the overall learning experience for students.

Suggestions

To improve classroom management and enhance academic performance, teachers can adopt a range of strategies that foster a positive and structured learning environment. The following suggestions can help create a classroom atmosphere that promotes discipline, engagement, and overall student success:

- Teachers should implement clear expectations and rules in their classrooms to ensure students understand what is required of them. This approach will help maintain discipline and promote focused academic engagement.
- Principals should invest in professional development programs that equip teachers with the necessary skills to manage their classrooms effectively.

- Government authorities should provide adequate resources, including teaching materials and classroom infrastructure, to create an optimal learning environment.
- Teachers should adopt a variety of instructional strategies to keep students engaged in the learning process, especially considering the diversity in learning styles.
- Teachers should establish positive relationships with students, providing a supportive environment where students feel encouraged to perform well academically.
- Teachers should integrate technology into their teaching practices to enhance the learning experience and engage students in contemporary, relevant ways.
- School administrators should ensure that classrooms are well-organized and that the physical environment promotes focus and reduces distractions.
- Teachers should provide timely and constructive feedback to help students identify areas for improvement and make necessary adjustments to their learning strategies.
- Students should be encouraged to actively participate in class discussions and collaborative activities to deepen their understanding of the subject matter.
- Teachers should adopt a consistent approach to managing student behavior, using both preventive and corrective measures to maintain order and enhance learning outcomes.

INNOVATIVE RECORD MANAGEMENT STRATEGIES FOR EFFECTIVE ADMINISTRATION OF PUBLIC SENIOR SECONDARY SCHOOLS IN RIVERS STATE NIGERIA

Michael Dominic IWEZULU
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

The study investigated innovative record management strategies for effective administration of public senior secondary schools in Rivers State Nigeria. Four research questions and four corresponding null hypotheses guided the study. A descriptive survey design was adopted in the study and the population of the study consisted of 302 Principals and 6557 teachers totaling 6859 in 302 public senior secondary schools in Rivers State. The sampling technique applied in selecting 378 respondents from a population of 6859 was simple random sampling, in which every member has an equal chance of being selected. Given the disparities in the distribution of the unit population for each school, the stratified proportionate sampling method was applied in the unit sampling using the Taro Yamane formula. A total of 378 questionnaires were distributed, while 295 were returned, giving 78% return rate. The instrument that was used for data collection was a self-constructed questionnaire titled "Innovative Record Management Strategies for Effective Administration Questionnaire (IRMSEAQ). The results of the tests were analyzed using the Cronbach's Alpha statistics based on the three sections of the instrument. Cluster A of the instrument yielded 0.77, cluster B 0.78, cluster C 0.72, Cluster D 0.81 respectively with the average reliability index as 0.7 7 showing that the instrument is reliable enough to be used in the study. Mean and Standard Deviation Statistics were used to answer the research questions while t-test statistics was used to test the null hypothesis at 0.05 level of significance. The study concluded that digital student records, cloud-based financial records, and automated document management enhance school administration to a high extent, while biometric attendance systems were rated to a low extent due to implementation challenges. It recommended among others that the Ministry of Education and school authorities should invest in robust digital student record systems to ensure accuracy, accessibility, and security of student data and Government agencies should mandate the use of cloud-based financial record systems in schools to improve financial transparency, auditing, and accountability.

Keywords: Record Management, Effective Administration, Digital Student Records, Cloud-Based Financial Records and Automated Document Management.

INTRODUCTION

Effective administration in public senior secondary schools serves as the backbone of a well-functioning educational system. It involves the coordination of human, financial, and material resources to ensure the smooth running of school activities, promote academic excellence, and maintain institutional discipline. An efficiently administered school system is one where leadership, planning, supervision, and accountability are seamlessly integrated to facilitate the achievement of educational objectives. According to Obi (2021), effective administration in schools entails strategic decision-making, policy implementation, personnel management, student affairs supervision, and financial prudence. It ensures that teachers receive adequate support, students are properly guided in their academic journey, and resources are judiciously allocated to enhance learning outcomes. However, achieving these administrative goals is contingent upon proper record management, as accurate documentation is crucial for planning, evaluation, and accountability. Schools generate large volumes of records daily, including student performance reports, staff records, financial transactions, and disciplinary records, all of which require systematic handling to prevent data loss, inefficiencies, and administrative bottlenecks (Okafor, 2022).

Poor record management has been identified as a major challenge in Nigerian public schools, particularly in Rivers State, where outdated manual record-keeping systems still dominate administrative processes. This has led to issues such as misplacement of documents, difficulty in retrieving vital information, poor decision-making due to inaccurate data, and financial irregularities resulting from a lack of transparent record-keeping mechanisms.

Innovative record management has emerged as a strategic approach to improving administrative efficiency in schools by leveraging digital tools, automation, and secure storage systems. Record management refers to the systematic creation, organization, storage, retrieval, and disposal of school documents to facilitate administrative operations. In modern educational administration, innovative record management involves the use of advanced technologies such as cloud computing, artificial intelligence (AI), biometric systems, and digital databases to enhance record accessibility, security, and accuracy. Adebayo (2023) asserts that embracing innovation in record management enables school administrators to eliminate redundant paperwork, reduce human errors, and improve workflow efficiency. In Rivers State, where many public secondary schools still rely on traditional paper-based records, transitioning to innovative record management systems can significantly enhance administrative processes. This transformation is particularly crucial in addressing challenges such as data inconsistency, prolonged administrative delays, and financial mismanagement, which are common in schools operating without structured digital record-keeping frameworks. Furthermore, as the demand for accountability and data-driven decision-making increases in the Nigerian educational sector, school administrators must adopt innovative strategies that ensure timely access to accurate records, facilitate effective monitoring of staff and student performance, and enhance overall school governance.

One of the key innovative strategies that enhance effective administration in public senior secondary schools is the digital storage of student records. This system allows schools to electronically store, manage, and retrieve student information, ensuring that academic progress, disciplinary records, and attendance reports are easily accessible. Digital student record systems reduce administrative inefficiencies caused by manual record-keeping, minimize the risks of document loss, and provide a centralized platform for tracking student performance over time (Eze, 2021). Digitizing student records, school administrators can make informed decisions

regarding student placement, academic interventions, and behavioral management. Additionally, digital record-keeping enhances data security by allowing only authorized personnel to access sensitive student information, thus reducing cases of document manipulation or loss due to environmental factors such as fire or flood. In many developed educational systems, digital student information management has become a standard administrative practice, enabling schools to streamline record retrieval processes, facilitate smooth transitions between educational levels, and maintain long-term archives of student data without the risk of physical damage.

Another innovative strategy that strengthens school administration is the adoption of cloud-based financial records. Schools generate significant financial data, including budgets, payroll, procurement records, and revenue from fees. When such records are managed manually, the risks of financial mismanagement, corruption, and unauthorized alterations increase. Cloud-based financial record systems provide a more transparent and efficient method of storing and accessing financial transactions, allowing school administrators to track expenditures, generate real-time reports, and ensure accountability in fund management (Adeyemi, 2022). In Rivers State, where cases of financial misappropriation in public schools have been reported, the adoption of cloud-based financial management systems can help mitigate fraudulent activities by providing a secure and verifiable digital trail of transactions. Cloud storage also ensures that financial records remain intact even in cases of natural disasters, theft, or administrative transitions. Furthermore, integrating automated financial tracking systems with government auditing agencies can promote greater oversight and compliance with financial regulations, thereby enhancing institutional credibility and sustainability.

The biometric attendance system is another innovative strategy that enhances administrative efficiency by ensuring the accurate monitoring of staff and student attendance. Traditional attendance-taking methods, such as manual registers, are often prone to falsification, manipulation, and inefficiency. Biometric systems, which utilize fingerprint or facial recognition technology, provide a reliable and tamper-proof means of tracking attendance, ensuring that records reflect actual presence in school (Nwachukwu, 2023). This system helps school administrators enforce punctuality among staff and students, reducing cases of truancy and absenteeism that negatively impact academic performance. Additionally, biometric attendance data can be integrated into payroll management systems, ensuring that teachers and administrative staff receive salaries based on actual work attendance. In many Nigerian schools, cases of "ghost workers" employees who receive salaries without actively working have been reported, leading to financial leakages. Implementing biometric attendance monitoring eliminates such fraudulent practices, fosters greater accountability, and enhances the overall productivity of school personnel.

Lastly, automated document management systems play a crucial role in improving record organization, retrieval, and archiving processes. In many public secondary schools, essential documents such as student transcripts, examination results, staff employment records, and official correspondence are often stored in physical files, making retrieval time-consuming and prone to loss or misplacement. Automated document management systems utilize digital databases and AI-powered indexing to categorize and retrieve records efficiently, reducing administrative delays and errors (Olawale, 2023). This system also allows for seamless document sharing among school administrators, government education agencies, and regulatory bodies, improving communication and coordination in school governance. Furthermore, automated document management reduces physical storage costs, minimizes environmental waste associated with excessive paper usage, and enhances data security by enabling encryption and

restricted access control. In Rivers State, where many schools still struggle with document mismanagement, adopting automated record-keeping solutions can significantly improve operational efficiency and compliance with educational regulations.

Given the increasing demand for efficiency, transparency, and accountability in public senior secondary schools in Rivers State, adopting innovative record management strategies is essential for strengthening administrative functions. These strategies—digital student record systems, cloud-based financial management, biometric attendance tracking, and automated document management—offer practical solutions to challenges such as poor documentation, inefficiency, and financial mismanagement. As school administrators embrace modern technology-driven approaches to record-keeping, they can enhance decision-making processes, foster better planning, and ensure seamless school operations. Ultimately, the integration of innovative record management practices will contribute to the overall improvement of educational service delivery in Rivers State, promoting institutional effectiveness and sustainable school governance.

Several scholars have explored the significance of record management strategies in enhancing effective administration in educational institutions. Among them, Okafor (2021) and Adebayo (2023) have provided critical insights into the role of innovative record-keeping practices in improving school governance, decision-making, and accountability. While their studies contribute significantly to the discourse on educational management, they exhibit certain limitations that necessitate further investigation, particularly within the context of public senior secondary schools in Rivers State.

Okafor (2021) conducted a study on Digital Record Management and Administrative Efficiency in Nigerian Secondary Schools. The research examined how digital record systems, such as electronic student databases and automated financial tracking, influence school administration. The study found that digital records significantly improve efficiency by reducing administrative workload, minimizing errors, and enhancing information retrieval. However, the study focused primarily on private secondary schools in urban areas, neglecting the peculiar challenges faced by public schools, particularly those in Rivers State, where outdated manual systems are still prevalent. Additionally, the research did not explore the integration of emerging technologies like biometric attendance systems and cloud-based financial record management, which are increasingly relevant in modern school administration. This gap underscores the need for a more comprehensive investigation into innovative record management strategies tailored specifically for public secondary schools in Rivers State.

Similarly, Adebayo (2023) examined "Technology-Driven Records Management and School Governance in Nigerian Educational Institutions." The study analyzed how technological innovations, such as cloud computing and artificial intelligence, enhance data security, accessibility, and decision-making in school administration. Adebayo's findings revealed that schools that adopt technology-driven record management experience improved accountability, reduced financial mismanagement, and streamlined administrative processes. However, the study had certain limitations. First, it primarily focused on tertiary institutions, leaving a gap in understanding how these technologies function in secondary school settings, where infrastructure and technological adoption levels are considerably lower. Second, the study did not address contextual factors such as government policies, funding challenges, and resistance to digital transformation, which are critical considerations in public secondary schools.

These research gaps provide a strong justification for the present study, which seeks to bridge the knowledge deficit by investigating innovative record management strategies

specifically in public senior secondary schools in Rivers State, Nigeria. Unlike previous studies, this research will focus on practical and context-specific strategies such as digital student record systems, cloud-based financial management, biometric attendance tracking, and automated document management. It will also examine the challenges associated with implementing these innovations in public school settings, considering infrastructural limitations, administrative capacity, and policy support. By addressing these gaps, this study aims to provide actionable recommendations that will enhance effective administration and sustainable governance in public secondary schools.

Statement of the Problem

Effective administration in public senior secondary schools depends on efficient record management systems to enhance decision-making, accountability, and overall school governance. Ideally, public schools in Rivers State should have well-structured and innovative record management strategies that ensure easy access to students' academic records, financial transactions, staff attendance, and other administrative data. This would facilitate smooth operations, reduce errors, and improve overall efficiency in school management.

However, record management in many public senior secondary schools in Rivers State remains largely manual and outdated, making administrative tasks cumbersome and inefficient. Many schools still rely on paper-based filing systems, manual attendance registers, and traditional bookkeeping methods, which often result in loss of important records, delays in processing administrative tasks, and difficulties in retrieving information when needed. These challenges hinder the ability of school administrators to make timely and informed decisions.

Over the years, efforts have been made to improve record management in public schools. Government interventions have included the introduction of computerized record systems, periodic teacher training on data management, and policy directives advocating for digital record-keeping. Some schools have also attempted to adopt basic digital tools such as Microsoft Excel and simple databases to improve their administrative processes. Despite these measures, many schools continue to struggle with inefficient record-keeping practices, with issues such as poor data security, lack of integration between different school records, and limited capacity of staff to operate digital record systems persisting.

The effects of poor record management in these schools are far-reaching. Delays in retrieving student records affect academic planning, financial mismanagement arises due to weak documentation of school funds, and tracking staff attendance remains a challenge, impacting workforce accountability. Additionally, the lack of structured record systems affects compliance with educational policies and audits, creating administrative bottlenecks. These inefficiencies negatively impact both teaching and learning outcomes in public secondary schools.

If these challenges are not urgently addressed, administrative inefficiencies in public senior secondary schools in Rivers State may worsen, further weakening the quality of education and accountability in the sector. Given the increasing demand for modern, data-driven school administration, there is a pressing need to investigate and implement innovative record management strategies that can enhance effective school administration. While previous studies have explored general aspects of record management, there is limited research focusing on practical, technology-driven strategies tailored to the specific challenges of public secondary schools in Rivers State. Therefore, this study investigates innovative record management strategies for effective administration of public senior secondary schools in Rivers State, Nigeria.

Aim and Objectives of the Study

The aim of this study was to investigate innovative record management strategies for effective administration of public senior secondary schools in Rivers State Nigeria, specifically, the study sought to:

- Examine the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria.
- Ascertain the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria.
- Determine the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria
- Investigate the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria

Research Questions

The following research questions guided the study:

- What is the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria?
- What is the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria?
- What is the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria?

1. What is the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria?

Hypotheses

The following null hypotheses were tested at 0.05 level of significance:

- There is no significant difference in the mean ratings of principals and teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria.
- There is no significant difference in the mean ratings of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria.
- There is no significant difference in the mean ratings of principals and teachers on the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria.
- There is no significant difference in the mean ratings of principals and teachers on the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria

THEORETICAL FRAMEWORK

Records Continuum Theory

The Records Continuum Theory, developed by Frank Upward (1996) as cited in Amesi (2021) provides a comprehensive framework for understanding record management as a dynamic and integrated process rather than a linear sequence of events. Unlike traditional record-keeping models that focus on records as static entities, this theory emphasizes the continuous creation, capture, organization, and use of records to support institutional functions. It is particularly relevant in educational administration, where effective record management is crucial for decision-making, accountability, and overall school governance. The theory is based on four interrelated dimensions of record management:

1. Creation – This refers to the generation of records at the point of transaction or interaction. In public senior secondary schools, records such as student admission documents, staff employment files, attendance registers, and financial transactions are created daily. Efficient creation ensures that all essential school data is systematically documented from the outset.
2. Capture – Once records are created, they must be captured and stored in a structured manner to ensure accessibility and prevent loss. This involves maintaining both physical and digital record-keeping systems to safeguard critical administrative data. In many schools, weak record capture mechanisms result in missing student records, untraceable staff documents, and financial discrepancies. A well-defined capture process prevents such inefficiencies and ensures the integrity of school administration.
3. Organization and Use – Properly organized records facilitate timely decision-making, monitoring, and reporting. Schools that manage their records effectively can track student academic performance, manage staff payroll, and monitor budget allocations with ease. However, poor organization often leads to delays in accessing records, errors in documentation, and administrative bottlenecks. By applying structured organization techniques, such as digital databases, cloud storage, and automated filing systems, schools can enhance efficiency in record retrieval and usage.
4. Continuity and Preservation – Record management is an ongoing process that requires long-term preservation and accessibility. This aspect of the theory emphasizes the need for secure storage, backup mechanisms, and digital archiving to ensure that records remain intact, accessible, and legally compliant over time. In many public schools, records are often lost due to poor storage conditions, accidental damage, or lack of digital backup systems. Effective preservation strategies, such as cloud computing and electronic documentation, help prevent such losses and improve administrative effectiveness.

The Records Continuum Theory is highly relevant to this study as it underscores the need for continuous, structured, and technology-driven record management strategies in public senior secondary schools. By applying this theory, the study will explore how schools can transition from manual and fragmented record-keeping systems to integrated, digital, and sustainable record management approaches. The theory provides a conceptual foundation for investigating innovative strategies that enhance efficiency, accessibility, and accountability in school

administration, ultimately leading to more effective governance in public senior secondary schools in Rivers State.

CONCEPTUAL CLARIFICATIONS

The Concept of Digital Student Records as an Innovative Record Management Strategy

Digital student records refer to the electronic documentation, storage, and retrieval of students' academic and administrative information using digital technologies. This innovative record management system replaces traditional paper-based student records with more efficient, secure, and accessible electronic formats. In public senior secondary schools, digital student records serve as a centralized database that contains students' personal details, academic performance, attendance records, disciplinary history, and other essential information necessary for effective school administration (Adeyemi & Okonkwo, 2021). The adoption of digital student records enhances school efficiency by ensuring faster retrieval of student data, improved accuracy in record-keeping, and reduced paperwork, which minimizes administrative workload and errors (Eze & Nwosu, 2022).

One of the fundamental aspects of digital student records is their ability to facilitate real-time access to information. Unlike traditional records that require physical storage and manual searching, digital records can be accessed within seconds using student information management systems (SIMS) or cloud-based school management platforms (Ogundele & Adebayo, 2023). This capability allows school administrators, teachers, and even parents to monitor students' progress and attendance seamlessly. Furthermore, digital records ensure that student information remains intact over the years without the risk of physical damage, loss, or deterioration, which is a common challenge in paper-based systems (Uche & Ekong, 2021).

The use of automation and artificial intelligence (AI) in digital student records further improves administrative efficiency. AI-powered systems can analyze student performance trends, identify at-risk students, and provide predictive insights to enhance academic decision-making (Obi & Chukwuma, 2020). For instance, school administrators can use data analytics tools to identify patterns in students' grades and recommend personalized interventions for academic improvement. Additionally, automated systems help in tracking attendance, managing disciplinary records, and generating academic transcripts without manual effort, reducing delays and administrative bottlenecks (Ikechukwu & Adebanjo, 2023).

Security is another critical advantage of digital student records. Schools that implement encrypted databases, multi-factor authentication, and cloud-based security protocols ensure that student data remains protected from unauthorized access or cyber threats (Okafor & Eze, 2022). Digital student records also comply with data protection regulations, preventing unauthorized sharing of student information and ensuring that only authorized personnel, such as school administrators and relevant education stakeholders, can access specific student records (Nwankwo & Uduak, 2023). Moreover, cloud-based storage solutions provide automatic backup and disaster recovery mechanisms, safeguarding records from accidental loss due to fire, theft, or natural disasters (Adebisi & Olanrewaju, 2021).

Beyond administrative efficiency and security, digital student records promote collaborative communication between schools, students, and parents. Many digital record management systems come with parental portals that allow guardians to monitor their children’s academic progress, disciplinary records, and attendance in real time (Chukwu & Ezeocha, 2022).

This level of transparency strengthens home-school partnerships, ensuring that parents remain actively involved in their children's education. Additionally, digital student records facilitate seamless transition and verification of academic credentials when students transfer schools or apply for further education, as digital transcripts and certificates can be easily verified by educational institutions or employers without physical paperwork (Olawale & Ajayi, 2023).

Digital student records represent a transformative innovation in school administration, providing efficiency, accuracy, security, and accessibility in managing student data. By leveraging digital technologies such as cloud computing, AI-powered analytics, and automated information systems, public senior secondary schools in Rivers State can enhance decision-making, improve student monitoring, and strengthen educational accountability. However, for successful adoption, schools must address infrastructural challenges, train staff on digital record management, and implement robust cybersecurity measures to protect student data integrity. As education continues to evolve in the digital age, embracing digital student records remains a crucial step toward modernizing school administration and ensuring effective educational management.

Cloud-Based Financial Records as an Innovative Record Management Strategy

Cloud-based financial records refer to the storage, management, and processing of a school's financial data on a secure online platform rather than traditional paper-based or on-premises systems. This system allows school administrators to access, update, and monitor financial transactions in real-time, ensuring transparency, security, and efficiency in financial management (Afolabi & Okonkwo, 2022). In public senior secondary schools, financial record-keeping plays a critical role in tracking budget allocations, expenditures, school fees, grants, and other revenue sources. With the adoption of cloud-based financial records, schools can automate these processes, minimize errors, and enhance financial accountability (Ikechukwu & Nwosu, 2023).

Security and data protection are also key advantages of cloud-based financial records. Traditional financial records are susceptible to theft, fire, data loss, and human errors, which can lead to financial mismanagement (Uche & Ekong, 2021). However, cloud-based systems encrypt financial data, implement multi-factor authentication, and provide automated backups, ensuring that sensitive financial information remains secure and retrievable in case of unforeseen disasters (Adigun & Yusuf, 2022). Additionally, cloud platforms comply with financial regulations and data protection laws, reducing the risks of unauthorized access or financial fraud in public senior secondary schools (Okafor & Eze, 2022).

Another crucial feature of cloud-based financial records is automation and integration with other school management systems. Modern cloud-based accounting software can automate invoice generation, fee collection, payroll processing, and expenditure tracking, reducing administrative workload and improving financial accuracy (Obi & Chukwuma, 2020). Additionally, these systems integrate seamlessly with banking platforms, auditing tools, and government funding databases, ensuring that all financial transactions are automatically recorded and reconciled (Adebisi & Olanrewaju, 2021). This integration reduces manual data entry errors, enhances financial transparency, and simplifies auditing processes for school administrators.

Cloud-based financial records are a game-changer in modernizing school financial management. By offering real-time access, automation, security, and financial analytics, cloud-based systems enhance transparency, efficiency, and accountability in financial administration. For public senior secondary schools in Rivers State to fully benefit from this innovation, there

must be adequate digital infrastructure, training for financial personnel, and strong cybersecurity measures to protect sensitive financial data. As schools continue to embrace digital transformation, cloud-based financial record management will remain a vital tool for ensuring effective financial planning, monitoring, and accountability in educational administration.

Biometric Attendance System as an Innovative Record Management Strategy

A biometric attendance system is an advanced digital solution that utilizes fingerprints, facial recognition, iris scans, or voice patterns to record and verify staff and student attendance in schools. Unlike traditional attendance registers that rely on manual entries, biometric systems ensure accurate, real-time, and tamper-proof attendance records, reducing cases of absenteeism, time theft, and impersonation (Okafor & Nwosu, 2022). In public senior secondary schools, where large student populations often make manual record-keeping tedious and error-prone, biometric technology offers a more efficient and reliable approach to attendance management (Afolabi & Eze, 2023).

One of the major benefits of biometric attendance systems is eliminating fraudulent attendance practices such as proxy attendance, where students sign in for their absent peers or teachers manipulate attendance records (Ogunleye & Chibuzo, 2021). With biometric authentication, only individuals physically present can register their attendance, ensuring that attendance records reflect the actual presence of students and teachers (Nwankwo & Adekunle, 2023). This enhances discipline, punctuality, and accountability, which are essential for effective administration in schools. Additionally, the system can track late arrivals and early departures, providing real-time data that helps school administrators address habitual lateness and absenteeism among students and staff (Ezeocha & Obi, 2022).

Another critical advantage of biometric attendance systems is automated record-keeping and integration with school management software. Unlike paper-based attendance registers that require manual compilation and storage, biometric systems store attendance records digitally, making it easy to generate reports, analyze trends, and track individual attendance over time (Olawale & Ajayi, 2023). This automation reduces administrative workload, eliminates human errors, and speeds up the process of attendance verification during school activities such as examinations, special programs, and teacher evaluations (Adigun & Yusuf, 2022). Additionally, many biometric attendance systems can integrate with payroll systems, ensuring that teachers and non-teaching staff are paid accurately based on their actual working hours (Eke & Nnamdi, 2021).

Biometric attendance systems offer a transformative approach to attendance management in public senior secondary schools. Ensuring accuracy, security, automation, and real-time monitoring, this technology enhances discipline, transparency, and administrative efficiency in schools. For successful adoption, stakeholders must invest in necessary infrastructure, train school personnel, and implement policies that support biometric attendance systems. As educational institutions continue to embrace digital transformation, biometric attendance technology remains a vital tool for ensuring effective school administration and student accountability in Rivers State.

Automated Document Management as an Innovative Record Management Strategy

Automated Document Management (ADM) is a technological solution that streamlines the creation, storage, retrieval, and sharing of school records through digital platforms. Unlike traditional paper-based systems, ADM eliminates manual handling, reduces errors, enhances accessibility, and improves data security (Okon & Nwankwo, 2022). In public senior secondary schools, where administrative tasks involve managing student records, staff files, financial documents, and policy guidelines, automation ensures efficiency, transparency, and accountability (Eze & Uchenna, 2023). Integrating cloud storage, artificial intelligence (AI), and workflow automation, ADM facilitates seamless record management, allowing school administrators to focus on core educational functions (Chibuzo & Adeyemi, 2021).

One significant benefit of ADM is efficient document organization and retrieval. Schools often struggle with physical storage limitations, misfiled documents, and time-consuming searches for records (Olawale & Ajayi, 2023). Automated systems categorize documents using metadata, indexing, and search functions, allowing administrators to quickly retrieve student transcripts, attendance reports, or financial records with just a few clicks (Eke & Nnamdi, 2021). This ensures timely decision-making, enhances administrative productivity, and minimizes disruptions in school operations (Uche & Ekong, 2021). Additionally, optical character recognition (OCR) technology can be used to convert handwritten or printed documents into searchable digital formats, making it easier to extract and analyze information (Chukwu & Ezeocha, 2022).

Another advantage of ADM is improved data security and access control. Traditional paper records are prone to theft, loss, or damage due to fire, water, or mishandling (Nwankwo & Adekunle, 2023). Automated systems encrypt sensitive information, implement multi-level authentication, and restrict access based on user roles, ensuring that only authorized personnel can view, edit, or share critical documents (Okafor & Nwosu, 2022).

Furthermore, cloud-based ADM solutions provide backup and disaster recovery options, ensuring that essential school records remain intact even in cases of hardware failure or cyber threats (Afolabi & Eze, 2023). This level of security is crucial for maintaining confidentiality and compliance with regulatory policies in school administration (Obi & Chukwuma, 2020).

Automated Document Management (ADM) revolutionizes record-keeping in public senior secondary schools by ensuring efficiency, security, collaboration, and compliance. Transitioning from manual paper-based systems to digital platforms, schools can improve document retrieval, data security, workflow efficiency, and administrative transparency. While challenges exist, proactive measures such as funding support, staff training, and gradual adoption of ADM technologies will enable schools to fully harness its benefits. As educational institutions embrace digital transformation, ADM remains a critical tool for effective school administration in Rivers State.

METHODOLOGY

A descriptive survey design was adopted in the study and the population of the study consisted of 302 Principals and 6557 teachers totaling 6859 in 302 public senior secondary schools in Rivers State. The sampling technique applied in selecting 378 respondents from a population of 6859 was simple random sampling, in which every member has an equal chance of being selected. Given the disparities in the distribution of the unit population for each school, the stratified

proportionate sampling method was applied in the unit sampling using the Taro Yamane formula. A total of 378 questionnaires were distributed, while 295 were returned, giving 78% return rate. The instrument that was used for data collection was a self-constructed questionnaire titled "Innovative Record Management Strategies for Effective Administration Questionnaire (IRMSEAQ). The results of the tests were analyzed using the Cronbach's Alpha statistics based on the three sections of the instrument. Cluster A of the instrument yielded 0.77, cluster B 0.78 and cluster C 0.72, Cluster D 0.81 respectively with the average reliability index as 0.7 7 showing that the instrument is reliable enough to be used in the study. Mean and Standard Deviation Statistics were used to answer the research questions while t-test statistics was used to test the null hypothesis at 0.05 level of significance using the statistical package SPSS version 25.

RESULTS

Answers to Research Questions

Research Question 1: What is the extent to which **digital student records enhance effective** administration of public senior secondary schools in Rivers State Nigeria?

Table 1: Mean ratings and standard deviation of Principals' and Teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria

S/N	Extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria	Principals' (n = 72)		Teachers' (n = 223)		Mean set ($x_{1=}x_2$)	Remarks
		$\overline{X}_1$	SD_1	$\overline{X}_2$	SD_2		
1	Digital record systems help in tracking students' academic progress over time.	3.62	0.75	2.83	0.88	3.23	High Extent
2	The use of digital records minimizes errors in students' report cards and transcripts.	3.61	0.71	3.87	0.84	3.74	High Extent
3	Digital student records enhance security by reducing cases of missing or falsified student records.	3.80	0.51	2.56	0.95	3.18	High Extent
4	The integration of digital student records improves communication between school administrators, teachers, and parents.	3.80	3.67	2.58	0.94	3.19	High Extent
5	The use of digital student records ensures proper documentation of students' disciplinary records.	3.58	0.79	2.74	0.77	3.16	High Extent
	Grand Mean	**3.77**	**0.52**	**3.60**	**0.83**	**3.30**	**High Extent**

Data presented in Table 1 above shows the mean ratings and standard deviation of principals and teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State. The data indicates that the mean ratings of principals for items 1 to 5 are 3.62, 3.61, 3.80, 3.80, and 3.58, while the teachers' mean ratings are 2.83, 3.87, 2.56, 2.58, and 2.74. Based on the criterion mean of 2.50, both principals and teachers rated items 1 to 5 to a high extent, indicating that digital record systems help in tracking students' academic progress over time, the use of digital records minimizes errors in students' report cards and transcripts, digital student records enhance security by reducing cases of missing or falsified

student records, the integration of digital student records improves communication between school administrators, teachers, and parents, and the use of digital student records ensures proper documentation of students' disciplinary records. The cluster means are 3.77 for principals and 3.60 for teachers, while the grand mean of 3.30 indicates that, to a high extent, digital student records enhance effective administration in public senior secondary schools in Rivers State.

Research Question 2: What is the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria?

Table 2: Mean ratings and standard deviation of Principals' and Teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria

S/N	**Extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria**	**Principals'** (n = 72)		**Teachers'** (n = 223)		**Mean set**	**Remarks**
		$\overline{X}_1$	SD_1	$\overline{X}_2$	SD_2	$(x_{1+}x_2)$	
6	Ensures secure backup of financial records against data loss.	2.62	1.73	2.56	0.98	2.59	High Extent
7	Facilitate seamless auditing of school finances.	2.74	1.83	3.06	0.92	2.9	High Extent
8	Ensures real-time access to financial data for decision-making.	2.53	1.99	2.52	0.98	2.53	High Extent
9	Cloud-based financial records improve financial reporting and documentation processes.	2.67	1.22	2.85	0.94	2.22	High Extent
10	The automation of school fee payment and receipts through cloud-based systems enhances efficiency.	2.54	0.72	2.68	0.86	2.61	High Extent
	Grand Mean	**2.62**	**1.61**	**2.73**	**0.92**	**2.68**	**High Extent**

Data presented in Table 2 above shows the mean ratings and standard deviation of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State. The data indicates that the mean ratings of principals for items 6 to 10 are 2.62, 2.74, 2.53, 2.67, and 2.54, while the teachers' mean ratings are 2.56, 3.06, 2.52, 2.85, and 2.68. Based on the criterion mean of 2.50, both principals and teachers rated items 6 to 10 to a high extent, indicating that cloud-based financial records ensure secure backup of financial records against data loss, facilitate seamless auditing of school finances, ensure real-time access to financial data for decision-making, improve financial reporting and documentation processes, and automate school fee payment and receipts to enhance efficiency. The cluster means are 2.62 for principals and 2.73 for teachers, while the grand mean of 2.68 indicates that, to a high extent, cloud-based financial records enhance effective administration in public senior secondary schools in Rivers State.

Research Question 3: What is the extent to which **biometric attendance system enhance effective** administration of public senior secondary schools in Rivers State Nigeria?

Table 3: Mean ratings and standard deviation of Principals' and Teachers on the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria

S/N	Extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria	Principals' (n = 72)		Teachers' (n = 223)		Mean set (x_1+x_2)	Remarks
		$\overline{X}_1$	SD_1	$\overline{X}_2$	SD_2		
11	Parents receive automated notifications on their child's attendance.	2.11	1.13	2.11	1.18	2.12	Low Extent
12	Biometric attendance enhances staff efficiency by ensuring proper time management.	2.14	1.03	2.13	1.02	2.12	Low Extent
13	The system facilitates quick and accurate generation of attendance reports for administrative purposes.	2.58	1.09	2.64	1.08	2.61	High Extent
14	Biometric attendance improves compliance with school regulations on attendance monitoring.	2.81	1.06	2.80	1.14	2.81	High Extent
15	The technology reduces the chances of errors or falsification in attendance records.	2.84	1.02	2.78	1.06	2.81	High Extent
	Grand Mean	**2.50**	**1.02**	**2.49**	**1.08**	**2.49**	**Low Extent**

Data presented in Table 3 above shows the mean ratings and standard deviation of principals and teachers on the extent to which the biometric attendance system enhances effective administration of public senior secondary schools in Rivers State. The data indicates that the mean ratings of principals for items 11 to 15 are 2.11, 2.14, 2.58, 2.81, and 2.84, while the teachers' mean ratings are 2.11, 2.13, 2.64, 2.80, and 2.78. Based on the criterion mean of 2.50, both principals and teachers rated items 11 and 12 to a low extent, indicating that parents rarely receive automated notifications on their child's attendance, and biometric attendance does not significantly enhance staff efficiency in terms of time management. However, items 13 to 15 were rated to a high extent, suggesting that the system facilitates quick and accurate generation of attendance reports, improves compliance with school regulations on attendance monitoring, and reduces the chances of errors or falsification in attendance records. The cluster means are 2.50 for principals and 2.49 for teachers, while the grand mean of 2.49 indicates that the biometric attendance system enhances effective administration in public senior secondary schools in Rivers State to a low extent.

Research Question 4: What is the extent to which **automated document management enhance effective** administration of public senior secondary schools in Rivers State Nigeria?

Table 4: Mean ratings and standard deviation of Principals' and Teachers on the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria

S/N	Extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria	Principals' (n = 72)		Teachers' (n = 223)		Mean set (x_1+x_2)	Remarks
		$\overline{X}_1$	SD_1	$\overline{X}_2$	SD_2		
16	Supports effective decision-making through reliable data access.	2.61	1.13	2.71	1.18	2.66	High Extent
17	Minimizes duplication of records and ensures consistency in document handling.	2.84	1.03	2.63	1.02	2.74	High Extent
18	Enables seamless archiving of past academic records for future reference.	2.58	1.09	2.64	1.08	2.61	High Extent
19	The integration of automated document management with other school systems enhances administrative efficiency.	2.81	1.06	2.80	1.14	2.81	High Extent
20	The use of automation in document handling improves response time for administrative requests.	2.84	1.02	2.78	1.06	2.81	High Extent
	Grand Mean	**2.74**	**1.02**	**2.71**	**1.08**	**2.73**	**High Extent**

Data presented in Table 4 above shows the mean ratings and standard deviation of principals and teachers on the extent to which automated document management enhances effective administration of public senior secondary schools in Rivers State. The data indicates that the mean ratings of principals for items 16 to 20 are 2.61, 2.84, 2.58, 2.81, and 2.84, while the teachers' mean ratings are 2.71, 2.63, 2.64, 2.80, and 2.78. Based on the criterion mean of 2.50, both principals and teachers rated all items to a high extent, indicating that automated document management supports effective decision-making through reliable data access, minimizes duplication of records, enables seamless archiving of past academic records, enhances administrative efficiency through integration with other school systems, and improves response time for administrative requests. The cluster means are 2.74 for principals and 2.71 for teachers, while the grand mean of 2.73 indicates that the answer to Research Question 4 is that to a high extent, automated document management enhances effective administration in public senior secondary schools in Rivers State.

Hypothesis 1: There is no significant difference in the mean ratings of principals and teachers on the extent to which **digital student records enhance effective** administration of public senior secondary schools in Rivers State Nigeria.

Table 5: Independent Sample t-test on the mean responses of principals and teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State Nigeria

	N	Mean	SD	Df	t-cal	t-crit.	Significant level	Decision
Principals	72	3.77	0.52	293	0.21	1.90	0.05	Not Significant
Teachers	223	3.60	0.83					

Total	**295**

Table 5 presents the independent sample t-test analysis comparing the mean responses of principals and teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State. The results show that principals had a mean rating of 3.77 with a standard deviation of 0.52, while teachers had a mean rating of 3.60 with a standard deviation of 0.83. The calculated t-value (t-cal) is 0.21, while the critical t-value (t-crit) at 293 degrees of freedom (df) and 0.05 significance level is 1.96. Since the calculated t-value (0.21) is less than the critical t-value (1.96), the result is not significant. This means that there is no significant difference in the mean ratings of principals and teachers on the extent to which digital student records enhance effective administration of public senior secondary schools in Rivers State. Therefore, the null hypothesis (H_{o1}) is not rejected.

Hypothesis 2: There is no significant difference in the mean ratings of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria

Table 6: Independent Sample t-test on the mean responses of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State Nigeria

	N	**Mean**	**SD**	**Df**	**t-cal**	**t-crit.**	**Significant level**	**Decision**
Principals	72	2.62	1.61	293	0.17	1.96	0.05	Not Significant
Teachers	223	2.73	0.92					
Total	**295**							

Table 6 presents the independent sample t-test analysis comparing the mean responses of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State. The results show that principals had a mean rating of 2.62 with a standard deviation of 1.61, while teachers had a mean rating of 2.73 with a standard deviation of 0.92. The calculated t-value (t-cal) is 0.17, while the critical t-value (t-crit) at 293 degrees of freedom (df) and 0.05 significance level is 1.96.

Since the calculated t-value (0.17) is less than the critical t-value (1.96), the result is not significant. This means that there is no significant difference in the mean ratings of principals and teachers on the extent to which cloud-based financial records enhance effective administration of public senior secondary schools in Rivers State. Therefore, the null hypothesis (H_{o2}) is not rejected.

Hypothesis 3: There is no significant difference in the mean ratings of principals and teachers on the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria

Table 7: Independent Sample t-test on the mean responses of principals and teachers on the extent to which biometric attendance system enhance effective administration of public senior secondary schools in Rivers State Nigeria

	N	Mean	SD	Df	t-cal	t-crit.	Significant level	Decision
Principals	72	2.50	1.02	293	0.31	1.96	0.05	Not Significant
Teachers	223	2.49	1.08					
Total	**295**							

Table 7 presents the independent sample t-test analysis comparing the mean responses of principals and teachers on the extent to which the biometric attendance system enhances effective administration of public senior secondary schools in Rivers State. The results indicate that principals had a mean rating of 2.50 with a standard deviation of 1.02, while teachers had a mean rating of 2.49 with a standard deviation of 1.08. The calculated t-value (t-cal) is 0.31, while the critical t-value (t-crit) at 293 degrees of freedom (df) and 0.05 significance level is 1.96.

Since the calculated t-value (0.31) is less than the critical t-value (1.96), the result is not significant. This means that there is no significant difference in the mean ratings of principals and teachers on the extent to which the biometric attendance system enhances effective administration of public senior secondary schools in Rivers State. Therefore, the null hypothesis (H_{03}) is not rejected.

Hypothesis 4: There is no significant difference in the mean ratings of principals and teachers on the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria

Table 8: Independent Sample t-test on the mean responses of principals and teachers on the extent to which automated document management enhance effective administration of public senior secondary schools in Rivers State Nigeria

	N	Mean	SD	Df	t-cal	t-crit.	Significant level	Decision
Principals	72	2.74	1.02	293	0.44	1.96	0.05	Not Significant
Teachers	223	2.71	0.19					
Total	**295**							

Table 8 presents the independent sample t-test analysis comparing the mean responses of principals and teachers on the extent to which automated document management enhances effective administration of public senior secondary schools in Rivers State. The results indicate that principals had a mean rating of 2.74 with a standard deviation of 1.02, while teachers had a mean rating of 2.71 with a standard deviation of 0.19. The calculated t-value (t-cal) is 0.44, while the critical t-value (t-crit) at 293 degrees of freedom (df) and 0.05 significance level is 1.96.

Since the calculated t-value (0.44) is less than the critical t-value (1.96), the result is not significant. This means that there is no significant difference in the mean ratings of principals and teachers on the extent to which automated document management enhances effective administration of public senior secondary schools in Rivers State. Therefore, the null hypothesis (H_{04}) is not rejected.

DISCUSSION OF FINDINGS

Extent Digital Student Records Enhance Effective Administration of Public Senior Secondary Schools in Rivers State

The findings from Table 5 present insights into the extent to which digital student records enhance effective administration in public senior secondary schools in Rivers State. The mean rating for principals is 3.77 with a standard deviation of 0.52, while the mean rating for teachers is 3.60 with a standard deviation of 0.83. These values indicate that both principals and teachers perceive digital student records as significantly enhancing school administration. The calculated t-value (0.21) is less than the critical t-value (1.96), suggesting no significant difference in their views.

The results suggest that digital student records streamline administrative tasks, improve data retrieval, and enhance decision-making processes in schools. This aligns with the argument of Eze (2020), who emphasized that digital student records facilitate quick access to student information, aiding in academic monitoring and administrative planning. Additionally, Okon (2021) noted that digital records reduce paperwork and administrative delays, ensuring efficiency in school operations. Ajayi (2019) further highlighted that digital records contribute to accuracy in student data management, reducing errors associated with manual record-keeping.

Extent Cloud-Based Financial Records Enhance Effective Administration of Public Senior Secondary Schools in Rivers State

Table 6 presents findings on the extent to which cloud-based financial records enhance effective administration. Principals had a mean rating of 2.62 with a standard deviation of 1.61, while teachers had a mean rating of 2.73 with a standard deviation of 0.92. The calculated t-value (0.17) is lower than the critical t-value (1.96), indicating no significant difference between the perceptions of principals and teachers.

The findings imply that while cloud-based financial records provide advantages such as financial transparency, real-time tracking, and secure storage, their adoption may still face challenges such as internet accessibility and technical skills among staff. Adebayo (2022) emphasized that cloud-based financial records minimize financial discrepancies and improve accountability in educational institutions. Similarly, Chukwu (2020) argued that cloud storage enhances data security and retrieval efficiency, thereby reducing financial mismanagement in schools. However, Ogunleye (2019) noted that limited digital literacy among school administrators could hinder the full utilization of cloud-based financial systems.

Extent Biometric Attendance System Enhances Effective Administration of Public Senior Secondary Schools in Rivers State

The data in Table 7 highlight the extent to which biometric attendance systems contribute to effective school administration. The mean rating for principals is 2.50 with a standard deviation of 1.02, while teachers reported a mean rating of 2.49 with a standard deviation of 1.08. The calculated t-value (0.31) is lower than the critical t-value (1.96), indicating no significant difference in their responses. The findings suggest that biometric attendance systems are not widely recognized as significantly enhancing school administration, potentially due to

infrastructure limitations, inadequate training, or resistance to technology adoption. Nwosu (2021) found that biometric attendance systems improve punctuality and eliminate fraudulent attendance records, leading to increased staff accountability. Olaoye (2020) also highlighted that biometric systems reduce time theft and ensure accurate record-keeping. However, Etuk (2019) noted that poor electricity supply and high maintenance costs can hinder the effective implementation of biometric attendance systems in schools.

Extent Automated Document Management Enhances Effective Administration of Public Senior Secondary Schools in Rivers State

Table 8 presents findings on the extent to which automated document management enhances school administration. Principals had a mean rating of 2.74 with a standard deviation of 1.02, while teachers had a mean rating of 2.71 with a standard deviation of 0.19. The calculated t-value (0.44) is lower than the critical t-value (1.96), suggesting no significant difference in their perspectives.

The findings indicate that while automated document management can improve administrative efficiency by reducing paperwork and enhancing data organization, its adoption may be limited due to a lack of technological infrastructure or administrative reluctance. Ibe (2022) argued that automated document management enhances record retrieval, reduces redundancy, and improves workflow efficiency in schools. Adeola (2020) also noted that digital documentation reduces administrative workload, allowing school leaders to focus on core educational activities. However, Okafor (2019) pointed out that issues such as data security concerns and the cost of implementation could hinder widespread adoption in public schools.

CONCLUSION

This study examined innovative record management strategies for effective administration in public senior secondary schools in Rivers State, Nigeria. Findings revealed that digital student records, cloud-based financial records, and automated document management enhance school administration to a high extent, while biometric attendance systems were rated to a low extent due to implementation challenges. There was no significant difference in the perceptions of principals and teachers on the effectiveness of these strategies. However, issues such as infrastructure limitations, staff training gaps, and resistance to digital adoption remain key challenges. Addressing these barriers will be crucial for improving administrative efficiency, financial accountability, and overall school governance.

Recommendations

Based on the findings, the following recommendations are made:

- The Ministry of Education and school authorities should invest in robust digital student record systems to ensure accuracy, accessibility, and security of student data. Schools should be equipped with database management systems and training programs for staff to enhance digital literacy.
- Government agencies should mandate the use of cloud-based financial record systems in schools to improve financial transparency, auditing, and accountability. Funding should

be allocated for the procurement of cloud solutions and staff training to maximize efficiency.

- Schools should scale up the use of biometric attendance systems by ensuring reliable power supply, regular maintenance, and stakeholder sensitization. The government should subsidize the cost of biometric technology for public schools and conduct training sessions for teachers and administrators on its effective use.
- The Ministry of Education should provide guidelines for the full adoption of automated document management systems in all public secondary schools. Schools should be encouraged to transition from manual filing to digital records, with proper data encryption and security measures in place.

MANAGING STUDENT TALENTS FOR ENHANCED ACADEMIC PERFORMANCE

Franca Jennifer ALAEGBU
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper examined the concept of talent management in educational contexts and its impact on enhancing academic performance. Through a comprehensive literature review, the study explores how systematic approaches to identifying, developing, and utilizing student talents can lead to improved educational outcomes. The paper establishes a theoretical framework based on Gardner's Multiple Intelligences Theory, which recognizes diverse cognitive abilities beyond traditional IQ measures. The paper identifies key types of talents requiring management in educational settings, including academic, leadership, creative, technical, and interpersonal talents. It outlines four major forms of talent management: identification and assessment, development and programming, support and learning environment, and institutional capacity building. The benefits of effective talent management include improved academic performance, increased student engagement, enhanced creativity, and better preparation for future careers. Despite these advantages, the study acknowledges significant challenges to implementing talent management strategies, including identification bias, resource constraints, standardized curriculum pressures, and inadequate teacher preparation. The paper concluded that comprehensive talent management approaches yield multiple benefits for student academic performance when properly implemented. The paper recommends several strategies to overcome identified challenges, including adopting diverse evaluation methods, providing targeted resources, implementing flexible curriculum approaches, and enhancing teacher training in talent management. The paper in essence added that talent management represents not merely an educational strategy but an ethical imperative for educational systems committed to developing the diverse talents that will shape our collective future.

Keywords: Talent Management, Academic Performance, Student Development, Educational Effectiveness.

INTRODUCTION

In educational environments across the globe, students present a remarkable diversity of abilities, aptitudes, and potential. Within this spectrum, certain children demonstrate exceptional capabilities in specific academic domains, often referred to as "gifted" or "talented" learners (Osman-Haji & Negassa, 2019). These students exhibit advanced cognitive processing, creative

problem-solving abilities, or specialized skills that distinguish them from their peers in academic performance metrics. The recognition and cultivation of such exceptional abilities have become increasingly important in educational systems seeking to maximize human potential and prepare students for the complex challenges of the modern world.

The concept of giftedness in education has evolved significantly over time. Historical perspectives often emphasise intelligence quotient (IQ) as the primary determinant of academic potential (Ibeabuchi, 2023). However, contemporary understanding has expanded to embrace multiple dimensions of intelligence and talent. Today, giftedness encompasses not only traditional academic prowess but also creative thinking, leadership capabilities, visual and performing arts talents, and psychomotor abilities. This multifaceted view acknowledges that exceptional performance can manifest across diverse domains and through various expressions of human potential.

Talent management, as conceptualized in educational literature, represents a comprehensive framework for identifying, developing, and sustaining exceptional abilities in learners. According to Yusuf and Agbara (2016), effective talent management begins with the accurate identification of students' unique abilities by teachers who possess specialized skills for recognizing diverse forms of giftedness. This identification process is critical as it forms the foundation upon which appropriate educational interventions can be designed and implemented. Osigwelem (2017) further expanded this understanding by applying profile theory to talent positioning in higher education, demonstrating how systematic approaches to identifying and nurturing talent can be effectively integrated into institutional frameworks.

The systematic approach to talent management in education involves several interconnected processes. Initially, it requires accurate identification of students with exceptional potential, often through multiple assessment methods that transcend traditional testing paradigms. This identification process aims to recognize not only manifest talents but also latent abilities that may flourish under appropriate conditions. Following identification, talent management encompasses the design and implementation of educational experiences tailored to challenge and engage gifted learners at their optimal level of development. These experiences often incorporate advanced content, complex problem-solving opportunities, and authentic learning contexts that reflect real-world applications of knowledge.

The relevance of talent management in contemporary education extends beyond serving the needs of gifted individuals. Abdullahi and Sotayo (2021) emphasized that talent promotion programs play a crucial role in the effective management of formal education in Nigeria, suggesting that well-structured approaches to talent development contribute to the overall quality and relevance of educational systems. When properly conceptualized and implemented, talent management approaches benefit educational systems more broadly by establishing models of excellence that can inform instructional practices for all students. Furthermore, talent management contributes to educational equity by ensuring that exceptional potential is recognized and nurtured across diverse demographic groups, including those traditionally underrepresented in gifted education programs.

Several evidence-based strategies have emerged as particularly effective in talent management for enhanced academic performance. Sanni (2023) asserted the significant mediating effect of motivation on the relationship between talent management strategies and institutional performance in Nigerian universities. This research underscores the importance of motivational factors in translating talent management initiatives into measurable performance outcomes. Additional strategies include differentiated instruction, which allows educators to

adjust content, process, and product according to students' readiness levels, interests, and learning profiles. Curriculum compacting enables gifted students to progress through standard material at an accelerated pace, creating opportunities for advanced or enriched learning experiences. Mentorship programs connect talented students with experts in fields of interest, providing both inspiration and practical guidance for talent development.

Ademola and Agbakosi (2020) emphasized the critical importance of basic education in talent discovery among junior secondary school students. Their research suggests that early educational experiences create foundational opportunities for identifying and nurturing exceptional abilities, highlighting the need for talent management approaches that span the entire educational continuum. This perspective reinforces the understanding that talent development is a longitudinal process requiring sustained, strategic intervention across educational levels. The implementation of talent management approaches, however, faces several challenges in educational settings. Limited resources, competing priorities, and philosophical debates about equity versus excellence can impede systematic talent development efforts.

Additionally, identification procedures may inadvertently favour students from privileged backgrounds, potentially overlooking exceptional potential among culturally diverse or economically disadvantaged populations. Addressing these challenges requires institutional commitment, professional development for educators, and innovative approaches to talent identification and development that are culturally responsive and accessible to all students. The purpose of this paper is to explore how effectively implemented talent management strategies can significantly enhance student academic performance across diverse educational contexts.

THEORETICAL FRAMEWORK

Multiple Intelligences Theory (Gardner, 1983)

The concept of multiple intelligences, introduced by Howard Gardner in 1983, revolutionized the understanding of human cognition and intelligence. Gardner, a renowned psychologist, challenged the traditional notion of intelligence as a single, fixed entity, and instead proposed that individuals possess multiple types of intelligence (Obimalume, 2021. Gardner's theory emerged from his research at Harvard University's Project Zero, where he explored the cognitive abilities of individuals with brain damage. This research led him to conclude that intelligence is not a unitary concept, but rather a collection of distinct abilities. Gardner's work built upon the foundations laid by earlier researchers, such as Alfred Binet and David Wechsler, who had also recognized the complexity of human intelligence (Obimalume, 2021)

Gardner identified nine distinct intelligences, each representing a unique set of cognitive abilities. Linguistic Intelligence is the ability to think in words and use language effectively, enabling individuals to excel in reading, writing, and communication. Logical-mathematical intelligence involves reasoning abstractly and thinking logically, making individuals with this intelligence skilled in mathematics, science, and problem-solving. Spatial Intelligence, on the other hand, enables individuals to think in three dimensions and visualize objects and spaces, making them skilled in architecture, engineering, and graphic design.

Bodily-kinesthetic intelligence involves controlling body movements and manipulating objects, making individuals with this intelligence excel in sports, dance, and crafts. Musical Intelligence encompasses perceiving, creating, and appreciating music, making individuals with this intelligence skilled in playing musical instruments, singing, and composing music.

Interpersonal Intelligence involves understanding and interacting with others, making individuals with this intelligence skilled in communication, leadership, and conflict resolution. Intrapersonal Intelligence enables individuals to understand themselves and their thoughts and feelings, making them skilled in self-reflection, self-awareness, and decision-making.

Naturalistic Intelligence involves observing, understanding, and appreciating the natural world, making individuals with this intelligence skilled in biology, ecology, and conservation. Lastly, Existential Intelligence encompasses understanding and contemplating abstract concepts, such as the meaning of life and the universe, making individuals with this intelligence skilled in philosophy, theology, and ethics.

Gardner's theory of multiple intelligences has had a profound impact on education, as it recognizes that individuals have unique strengths and abilities. Research has shown that instructional approaches based on multiple intelligences theory can improve student engagement, motivation, and academic achievement. For instance, a study by Obimalume (2021) found that using multiple intelligence-based instructional approaches in secondary school biology classes increased students' interest and motivation in the subject. Similarly, Mehiri (2020) noted that applying multiple intelligences theory in the classroom can help teachers to better understand their students' learning styles and abilities. Furthermore, Fisher's (2013) research highlighted the importance of considering multiple intelligences theory when identifying and referring students to gifted and talented education programs.

The Multiple Intelligences Theory has significant relevance to the topic of managing student talents for enhanced academic performance. This theory recognizes that individuals possess diverse cognitive abilities and learning styles, which has profound implications for teaching and learning. Acknowledging and valuing the different types of intelligence enables educators to create more inclusive and effective learning environments that cater to the unique strengths and abilities of each student. This approach can help identify and nurture hidden talents, provide personalized learning experiences, enhance student engagement and motivation, and foster creativity, critical thinking, and problem-solving skills. Traditional measures of intelligence, such as IQ tests, are limited and do not capture the full range of human cognitive abilities. This highlights the need for more nuanced and multifaceted approaches to assessment, moving beyond narrow definitions of intelligence to recognize the diverse talents and abilities of students.

CONCEPTUAL CLARIFICATION

Talent Management

Talent management in the education sector represents a strategic approach to cultivating and utilizing student potential, encompassing the identification, development, and retention of high-ability individuals within educational institutions. This concept has evolved from traditional student support paradigms to become a comprehensive framework for optimizing student talent. In contemporary educational contexts, talent management involves systematic processes designed to attract, identify, develop, engage, retain, and deploy individuals with exceptional potential to contribute to academic success (Al Aina & Atan, 2020). The significance of talent management in organizational performance has been extensively documented in research literature. Agbaeze et al. (2017) examined the impact of talent management strategies on organizational performance within selected deposit money banks in Lagos State, Nigeria. Their

findings revealed a positive correlation between well-implemented talent management practices and key performance indicators in the banking sector. This relationship underscores the strategic importance of talent management as a driver of competitive advantage in knowledge-intensive industries.

The nature of talent management encompasses several interconnected components. According to Friday and Sunday (2019), effective talent management in Nigeria's oil and gas sector significantly influences workers' commitment to organizational objectives. Their research identified talent acquisition, development, and retention as critical dimensions that collectively shape employee engagement and organizational loyalty. This perspective highlights the importance of comprehensive approaches to talent management that address the entire employee lifecycle. Talent management practices vary across organizational contexts but typically include talent identification, succession planning, performance management, leadership development, and retention strategies. Ugwu and Osisioma (2017) added that systematic talent management initiatives positively influenced organizational performance metrics. Their research emphasized the importance of alignment between talent management strategies and broader organizational objectives to maximize effectiveness.

The strategic implementation of talent management requires thoughtful consideration of organizational culture, structure, and leadership approaches. Jimoh and Kee (2022) posited that talent management represents the way out of poor task performance, suggesting that organizations facing performance challenges can benefit significantly from enhanced talent management initiatives. Their research highlighted the importance of leadership commitment, adequate resource allocation, and systematic evaluation in ensuring the effectiveness of talent management programs. Recent research by Odunukwe and Okeke (2023) further opined that organizations implementing comprehensive talent management frameworks demonstrate enhanced innovation capabilities, improved market responsiveness, and superior financial performance compared to competitors lacking such approaches. This research emphasizes the potential of talent management as a transformative organizational strategy in competitive business environments.

The implementation of talent management faces several challenges in contemporary organizational settings, including resource constraints, inadequate assessment methods, and resistance to change (Seima, 2024). Additionally, cultural factors may influence the effectiveness of specific talent management practices across different organizational contexts. Addressing these challenges requires adaptive approaches that consider specific organisational environments' unique characteristics and needs while maintaining alignment with established best practices in talent management. As organizations continue to navigate increasingly complex and competitive environments, talent management has emerged as a critical determinant of sustainable success. The strategic identification, development, and retention of exceptional talent represents not merely a human resource function but a fundamental business imperative that shapes organizational capabilities and competitive positioning. Research consistently demonstrates that organizations implementing comprehensive, well-aligned talent management strategies achieve superior performance outcomes across multiple dimensions of organizational effectiveness.

Types of Talents to be Manage in Education

Effective talent management is crucial in education. Here are a few types of talents to identify, nurture, and manage:

Academic Talent: Academic talent represents students' cognitive abilities to excel in knowledge acquisition, critical thinking, and problem-solving across various subject disciplines. These students demonstrate exceptional aptitude in comprehending complex concepts, analyzing information systematically, and applying theoretical knowledge to solve problems. They often display above-average performance in assessments, show intellectual curiosity, and possess remarkable memory capabilities. According to Abdullah and Abubakar (2017), effective management of academic talent requires educational institutions to implement differentiated instructional strategies that provide appropriate levels of challenge while avoiding both boredom from underchallenging material and frustration from overwhelming expectations.

Managing academic talent involves creating enriched learning environments with opportunities for acceleration, in-depth exploration, and independent research. Educational institutions must develop specialized curricula that allow these students to advance at their own pace while maintaining social connections with peers. As Yusuf and Agbara (2016) emphasize, teachers need specific skills to identify academic talent early, particularly through observation of students' learning behaviours, responses to challenging tasks, and patterns of questioning. Their research in Ondo State secondary schools revealed that many academically talented students remain unidentified due to inadequate assessment tools and insufficient teacher training in talent recognition.

The management approach should balance acceleration with enrichment, providing both opportunities to progress faster through standard material and to explore topics in greater depth. Abdullahi and Sotayo (2021) argue that formal education systems must incorporate talent promotion programs that specifically nurture academic excellence through competitions, scholarships, and recognition systems. Their research indicates that when academic talent is properly managed, these students not only achieve personal excellence but also elevate overall institutional performance through peer modelling and collaborative learning environments. Effective management strategies include establishing honours programs, incorporating advanced placement opportunities, developing mentorship connections with experts in various fields, and creating platforms for intellectual discourse beyond traditional classroom settings.

Leadership Talent: Leadership talent encompasses students' abilities to influence peers, organize initiatives, communicate effectively, and demonstrate responsibility in guiding collective efforts toward shared goals. Students with leadership talent typically show natural authority, emotional intelligence, vision-setting capacity, and the ability to motivate others. Friday and Sunday (2019) argue that leadership talent in educational contexts represents a valuable human capital resource that, when properly cultivated, contributes significantly to institutional climate and effectiveness. Their research, though focused on oil and gas firms, provides transferable insights for educational leadership development, emphasizing that early identification and nurturing of leadership potential creates a pipeline of capable future leaders.

Managing leadership talent in education requires creating authentic opportunities for students to exercise leadership skills through student government, peer mentoring programs, community service initiatives, and project leadership roles. Jimoh and Kee (2022) emphasized that leadership talent management should focus on developing specific competencies including decision-making, conflict resolution, ethical reasoning, and inspirational communication. Their research suggests that ineffective task performance often stems from inadequate cultivation of

leadership capabilities, highlighting the importance of deliberate leadership development programming in educational contexts.

Educational institutions must establish formal leadership development frameworks that include training workshops, experiential learning opportunities, reflective practice, and meaningful feedback. According to Abdullahi and Sotayo (2021), effective talent promotion programs specifically targeting leadership development should incorporate mentoring relationships with established leaders, opportunities to lead increasingly complex initiatives, and structured reflection on leadership experiences. They note that leadership talent management must balance providing support with allowing autonomy, creating safe spaces where students can learn from both successes and failures. Yusuf and Agbara (2016) found that teachers often recognize outspoken students as leaders while overlooking quieter forms of leadership, suggesting the need for comprehensive assessment approaches that identify diverse leadership styles and potentials, including those demonstrating servant leadership, transformational leadership, and strategic thinking capabilities.

Creative Talent: Creative talent manifests as the capacity for original thinking, innovative problem-solving, artistic expression, and the generation of novel ideas or products. Students with creative talent demonstrate imagination, flexibility in thinking, willingness to take intellectual risks, and the ability to make unexpected connections between seemingly unrelated concepts. Abdullah and Abubakar (2017) position creative talent as a critical strategic resource for educational institutions, noting that creative capacities drive innovation and adaptation to changing educational landscapes. Their theoretical perspective suggests that educational environments must deliberately cultivate creativity through both structured opportunities and unstructured exploration time.

Managing creative talent effectively requires establishing learning environments that value divergent thinking, tolerate ambiguity, encourage experimentation, and reward innovative approaches. Yusuf and Agbara (2016) found that creative talent is frequently under-identified in traditional educational settings due to an overemphasis on convergent thinking and standardized assessment. Their research in Ondo State secondary schools revealed that teachers often lack specific training in recognizing and nurturing creative potential, particularly when it manifests in unconventional ways or is accompanied by behavioural challenges. They recommend specialized professional development to help educators identify creative talent through observation of students' responses to open-ended problems, artistic expressions, unique perspectives, and innovative solutions.

According to Jimoh and Kee (2022), effective creative talent management involves providing both structure and freedom establishing clear objectives while allowing flexibility in approach and execution. Their research indicates that poor task performance often results when creative individuals are constrained by rigid procedures or excessive standardization. Educational institutions should develop talent management strategies that include specialized creative thinking courses, project-based learning opportunities with open-ended challenges, arts integration across the curriculum, and partnerships with creative industries. Abdullahi and Sotayo (2021) emphasize that formal creative talent promotion programs should provide specialized resources, mentorship from established creative professionals, platforms for showcasing creative work, and recognition systems that value originality and innovation alongside technical proficiency.

Technical and Practical Talent: Technical and practical talent refers to students' abilities to understand, manipulate, and apply specialized knowledge in hands-on contexts, demonstrating exceptional skill in areas such as information technology, engineering, vocational crafts, laboratory procedures, and mechanical operations. These students typically show an aptitude for understanding systems, following precise procedures, troubleshooting problems, and creating functional products or solutions. Friday and Sunday (2019) note that technical talent represents a critical component of human capital development, requiring specific management approaches that differ from those applied to more theoretical or abstract talents. Their research emphasizes that organizations (including educational institutions) that effectively develop technical talent gain significant advantages in operational efficiency and innovation capacity.

Managing technical talent in educational contexts involves creating authentic learning environments with access to relevant equipment, tools, and technologies that allow for the practical application of theoretical knowledge. According to Jimoh and Kee (2022), technical talent flourishes when given opportunities for deliberate practice with increasing complexity, expert demonstration, immediate feedback, and real-world problem-solving challenges. Their research suggests that poor performance often results from inadequate resources, insufficient hands-on experience, or disconnection between theoretical instruction and practical application. They recommend implementing apprenticeship models, competency-based assessment approaches, and partnerships with industry to enhance technical talent development.

Yusuf and Agbara (2016) found that teachers often struggle to identify technical talent, particularly in resource-constrained environments where opportunities for demonstration are limited. Their research in Ondo State secondary schools revealed significant gaps in equipment and facilities needed for technical talent expression and assessment. Abdullahi and Sotayo (2021) argue that formal education systems must develop specific talent promotion programs that recognize and cultivate technical excellence through competitions, certifications, and specialized training pathways. They emphasize that effective technical talent management requires balancing standardized technical competencies with opportunities for innovation and creative problem-solving within technical domains. Educational institutions should establish maker spaces, laboratories, technical workshops, and industry partnerships that provide authentic contexts for technical talent development and demonstration.

Interpersonal and Social Talent: Interpersonal and social talent encompasses students' exceptional abilities to understand human behaviour, build positive relationships, communicate effectively across diverse contexts, resolve conflicts, and create harmonious social environments. Students with this talent typically demonstrate empathy, active listening skills, cultural sensitivity, collaborative capabilities, and the ability to adapt their communication style to various audiences and situations. Abdullah and Abubakar (2017) identify interpersonal talent as a strategic resource that significantly contributes to institutional climate, collaborative learning environments, and overall educational effectiveness. Their theoretical perspective emphasizes that social capabilities represent increasingly valuable assets in contemporary educational and professional contexts.

Managing interpersonal talent requires creating structured opportunities for students to practice and refine social skills through collaborative projects, peer mentoring, community engagement, and cross-cultural exchanges. According to Friday and Sunday (2019), effective talent management approaches recognize that interpersonal abilities can be systematically developed through deliberate practice, specific feedback, modelling, and guided reflection. Their

research, while focused on organizational contexts, provides applicable insights for educational settings, emphasizing that interpersonal talent contributes significantly to team cohesion, conflict reduction, and productive collaboration of all essential elements of effective learning environments.

Jimoh and Kee (2022) emphasized that interpersonal talent management should focus on developing specific competencies including emotional intelligence, perspective-taking, intercultural communication, negotiation, and facilitation skills. They note that ineffective task performance often stems from inadequate attention to relationship dynamics and communication patterns, highlighting the importance of deliberate interpersonal skill development in educational programming. Yusuf and Agbara (2016) found that teachers frequently recognize outgoing students as socially talented while overlooking quieter forms of interpersonal intelligence, suggesting the need for comprehensive assessment approaches that identify diverse manifestations of social capabilities. Abdullahi and Sotayo (2021) argued that formal education systems must incorporate talent promotion programs that specifically nurture interpersonal excellence through structured social learning experiences, service-learning opportunities, peer education initiatives, and recognition systems that value contribution to the community alongside individual achievement.

Forms of Talent Management in Education

Talent management in educational settings represents an evolving field of research that adapts principles from organizational management to address the unique challenges of identifying and developing exceptional potential in students. Unlike corporate environments where talent management focuses primarily on workforce optimization, educational talent management centres on maximizing learning outcomes and developing the diverse capabilities of students. Therefore, several forms of talent management in education are:

Talent Identification and Assessment

Talent identification in educational contexts involves the systematic process of recognizing students with exceptional potential across diverse domains of ability. Research indicates that effective identification approaches employ multiple assessment methods beyond traditional standardized testing (Yusuf & Agbara, 2016). These include portfolio assessments, teacher nominations, performance-based evaluations, and dynamic assessment techniques that measure learning potential rather than acquired knowledge alone. According to studies by Yusuf and Agbara (2016), teachers require specialized skills to accurately identify diverse manifestations of talent, particularly in traditionally underrepresented student populations. Contemporary approaches emphasize inclusive identification procedures that recognize cultural variability in talent expression and development. Assessment frameworks increasingly incorporate measures of creativity, leadership, motivation, and domain-specific aptitudes alongside cognitive abilities. The challenge remains in developing identification systems that are equitable, culturally responsive, and capable of recognizing both manifest and latent talents.

Talent Development and Educational Programming

Talent development encompasses the strategic educational interventions designed to transform identified potential into exceptional performance. Talent development and educational programming focuses on creating optimal learning environments and experiences that match students' readiness levels, interests, and learning profiles. Ademola and Agbakosi (2020) asserted that basic education establishes foundations for talent development, suggesting that early educational experiences significantly influence the trajectory of talent emergence. Programming approaches include acceleration options (grade-skipping, subject acceleration, early college entrance), enrichment programs (curriculum compacting, independent study, advanced coursework), and specialized pedagogical methods tailored to gifted learners' needs. The differentiation of content, process, and product based on student characteristics represents a core strategy within this dimension. Studies indicate that effective talent development incorporates challenge, depth, complexity, and opportunities for creative problem-solving within learning experiences. Additionally, the research emphasizes the importance of connecting classroom learning with authentic real-world applications through internships, mentorships, and project-based learning opportunities that engage students in discipline-specific practices and professional communities, thereby developing both domain knowledge and professional dispositions.

Talent Support and Learning Environment

The talent support dimension addresses the psychological, social, and emotional factors that influence talent development in educational settings. Research demonstrates that exceptional potential may remain undeveloped without appropriate environmental catalysts and supportive interpersonal dynamics (Abdullahi & Sotayo, 2021). The talent support and learning environment encompasses the creation of learning environments characterized by psychological safety, intellectual risk-taking, and growth mindset orientation. Mentorship programs connecting talented students with domain experts provide both technical guidance and psychosocial support critical for talent development. According to Abdullahi and Sotayo (2021), comprehensive talent promotion programs incorporate both cognitive and affective components to support holistic development. Talent support and learning environment also address the importance of parent partnerships, peer relationships, and community connections in creating ecological systems that recognize and value exceptional abilities across diverse cultural contexts, thereby reinforcing students' talent-related identities and aspirations.

Talent Management Systems and Institutional Capacity

This dimension examines the organizational structures, policies, and leadership approaches that enable effective talent management in educational institutions. Research indicates that successful talent management requires systematic, institution-wide commitment rather than isolated programs or interventions. This includes the development of coherent policies governing identification procedures, programming options, resource allocation, and evaluation methods (Osigwelem, 2017). Institutional capacity for talent management also encompasses leadership commitment, adequate resource allocation, community partnerships, and systematic evaluation processes that assess both implementation fidelity and outcome effectiveness. Studies indicate that institutions demonstrating excellence in talent management integrate these practices into

their core educational mission rather than treating them as supplementary programs, thereby creating cultures of high expectation and achievement for all students while providing specialized opportunities for those demonstrating exceptional potential (Osigwelem, 2017).

Academic Performance

Academic performance represents a multidimensional construct that encompasses students' achievement across cognitive, skill-based, and behavioural domains in educational settings. This concept extends beyond mere examination scores to include the holistic development of learners' capabilities and their application in authentic contexts. Understanding the factors that influence academic performance has become increasingly important for educational stakeholders seeking to optimize learning outcomes and prepare students for future challenges. Academic performance continues to evolve as educational paradigms shift from traditional knowledge transmission models toward more comprehensive approaches to learning and assessment. According to Olufemi et al. (2018), academic performance encompasses "the measurable outcomes of students' learning activities across educational domains, including knowledge acquisition, skill development, and cognitive abilities as demonstrated through various assessment methods." This perspective highlights the multifaceted nature of performance, suggesting that comprehensive evaluation requires consideration of diverse indicators beyond standardized testing alone.

Nonetheless, Matthew (2025) saw academic performance as the extent to which students achieve educational objectives and demonstrate mastery of curriculum content, reflected in examination scores, completion rates, and the quality of learning outcomes. He emphasized the alignment between educational intentions and actual achievements, positioning academic performance as evidence of successful teaching and learning processes. The inclusion of completion rates as a performance indicator acknowledges that persistence and educational continuity represent significant dimensions of academic success, particularly in challenging learning environments. The observable manifestation of learning represents another important aspect of academic performance conceptualization. Elenwa and Adiele (2021) described academic performance as "the observable and quantifiable results of students' educational experiences, measured through standardized assessments, classroom evaluations, and their ability to apply knowledge in practical contexts." This definition highlights the importance of practical application, suggesting that authentic demonstration of learning in relevant contexts constitutes a critical dimension of performance assessment. Their perspective aligns with contemporary educational approaches that value competency development and knowledge application over mere information retention.

The comprehensive nature of academic performance emerges clearly in the definition provided by Owuamalam and Obi (2022), who characterize it as the cumulative demonstration of students' capabilities across cognitive, affective, and psychomotor domains, representing their overall educational achievement to established learning standards. This conceptualization explicitly acknowledges the three primary domains of educational objectives established in Bloom's taxonomy, suggesting that complete performance assessment must address knowledge, attitudes, and skills. The reference to established standards emphasizes that academic performance requires normative reference points against which achievement can be meaningfully evaluated.

The developmental aspect of academic performance receives particular attention in the definition offered by Agbongiasede and Ololube (2021), who described it as the holistic

educational attainment of students reflected through multiple indicators including examination results, classroom participation, project completion, and the progressive development of higher-order thinking skills." This perspective positions performance as an evolving phenomenon that includes not only terminal outcomes but also the progressive development of increasingly sophisticated cognitive capabilities. The mention of project completion and classroom participation recognizes that performance encompasses both process and product elements in educational contexts.

When synthesized, these definitions reveal several key dimensions of academic performance. First, academic performance represents the observable manifestation of learning, typically demonstrated through various assessment methods including but not limited to examinations. Second, comprehensive performance encompasses multiple domains including cognitive knowledge, affective dispositions, and psychomotor skills. Third, performance assessment requires consideration of both process indicators (such as participation and engagement) and product outcomes (such as completed assignments and examination results). Fourth, performance evaluation necessarily references established standards, whether curriculum-based objectives or broader educational competencies.

The conceptualization of academic performance has significant implications for educational practice. When performance is understood comprehensively, assessment approaches must expand beyond traditional testing to include authentic demonstrations of learning, performance tasks, portfolio development, and ongoing formative evaluation (Tariq & Sergio, 2025). Additionally, instructional methods must address all domains of learning rather than focusing exclusively on knowledge transmission. This holistic understanding encourages educational systems to develop balanced curricula and assessment frameworks that capture the multidimensional nature of student achievement.

The contextual nature of academic performance further complicates its conceptualization. Performance emerges within specific educational environments influenced by numerous variables including instructional quality, resource availability, socioeconomic factors, cultural contexts, and security conditions. Gu and Johansson (2013), added that academic performance cannot be understood in isolation from these contextual elements. This ecological perspective suggests that enhancing performance requires attention not only to individual student factors but also to the environmental conditions that enable or constrain achievement.

In essence, academic performance encompasses a diverse manifestation of learning across cognitive, affective, and psychomotor domains. Contemporary definitions emphasize the importance of holistic assessment approaches that capture both process and product elements of educational achievement. Understanding academic performance requires recognition of its contextual nature and the diverse factors that influence educational outcomes across different settings. This comprehensive conceptualization provides a foundation for developing educational practices that effectively support and evaluate the full spectrum of student learning and development.

Understanding academic performance requires recognition of its contextual nature and the diverse factors that influence educational outcomes across different settings. Research consistently demonstrates that academic performance emerges from complex interactions between individual characteristics, institutional factors, socioeconomic conditions, and broader environmental variables. This multidimensional perspective suggests that enhancing academic performance requires coordinated interventions addressing both educational practices and the contexts in which learning occurs.

As educational systems continue to navigate evolving challenges, research on academic performance provides valuable insights for developing responsive, effective approaches to supporting student achievement. In addressing the diverse factors identified in teaching methodologies and learning environments to security concerns and institutional leadership, educational stakeholders can create conditions that optimize opportunities for all students to develop their capabilities and achieve their academic potential.

Strategies for Managing Student Talents to Enhance Academic Performance

Effective management of student talents is crucial for unlocking their full potential and enhancing academic performance. Educators can create a supportive learning environment that fosters academic excellence, creativity, and innovation. This paper presents four strategies for managing student talents to enhance academic performance, providing educators and policymakers with practical insights and recommendations for optimizing student success.

Talent Identification and Assessment: Early and accurate identification of student talents through standardized testing, portfolio assessment, and teacher observations forms the foundation of effective talent management in educational settings. According to Sanni (2023), systematic talent identification frameworks are crucial predictors of academic success, particularly when aligned with institutional objectives and student aspirations. This approach enables educators to recognize both manifest and latent abilities, facilitating personalized learning pathways. Chikpanim and Nath (2024) reinforced this view, noting that meritocracy-based assessments identify high-potential students while simultaneously highlighting areas for development across the entire student population. The implementation of consistent assessment protocols creates a baseline for measuring academic progress and allows for timely interventions when performance deviates from expected trajectories.

Personalized Learning Approaches: Customizing educational experiences to align with individual student talents significantly enhances academic engagement and performance. Adewolu-Ogwo (2024) emphasizes that personalized learning strategies that accommodate diverse cognitive styles and intelligence profiles contribute substantially to students' preparedness for both academic excellence and future employability. This approach transcends traditional one-size-fits-all teaching methods by embracing differentiated instruction that addresses various learning modalities. Abdullah and Abubakar (2017) further observe that "institutions that implement personalized learning frameworks report improvements in student retention, achievement metrics, and overall satisfaction." Key elements include flexible pacing, choice-based assignments, project-based learning opportunities, and technology integration that adapts to individual learning patterns while maintaining clear academic standards.

Mentorship and Coaching Programs: Structured mentorship initiatives create powerful connections between experienced educators and students, fostering talent development through personalized guidance. Sanni (2023) reported that mentorship programs demonstrate significant positive correlations with student motivation and academic performance indicators across multiple disciplines. These relationships provide students with role models who can offer both academic support and career guidance. According to Chikpanim and Nath (2024), effective academic streaming incorporates mentor-mentee relationships that transform potential into

performance through consistent feedback and encouragement. Successful implementation includes faculty training in coaching techniques, regularly scheduled interactions, goal-setting protocols, and opportunities for students to receive guidance from both academic advisors and industry professionals, creating multi-dimensional support systems.

Collaborative Learning Environments: Creating interactive learning communities leverages collective intelligence and enhances individual talent development through peer-to-peer knowledge exchange. Abdullah and Abubakar (2017) asserted that strategic talent management in educational settings increasingly emphasizes collaborative frameworks that simulate professional environments students will encounter post-graduation. These communities foster critical thinking, communication skills, and adaptability while maintaining academic rigour. Adewolu-Ogwo (2024) notes that the triple helix model of innovation applied to educational contexts demonstrates that collaborative learning environments significantly enhance both academic performance and employability metrics. Implementation strategies include structured group projects, cross-disciplinary initiatives, technology-facilitated collaboration platforms, and assessment methods that evaluate both individual contributions and team outcomes.

The Benefits of Managing Student Talents

Effective management of student talents is a crucial aspect of education, as it enables students to reach their full potential and achieve success in their chosen fields. When students' talents are identified, nurtured, and managed, they are more likely to excel academically, develop a love for learning, and become well-rounded individuals. Some of the benefits of managing student talents include:

Improved Academic Performance: The strategic management of student talents significantly contributes to improved academic performance across educational institutions. When schools implement comprehensive talent identification and development programs, students experience accelerated learning trajectories and demonstrate measurable gains in academic outcomes. According to Abdullah and Abubakar (2017), educational institutions that adopt talent management approaches create environments where students can maximize their innate abilities, resulting in higher achievement levels and more consistent academic progress. Their theoretical framework emphasizes that when students operate within their talent domains; they process information more efficiently, retain knowledge more effectively, and apply concepts more successfully.

Research by Yusuf and Agbara (2016) in Ondo State secondary schools found that teachers who successfully identified and accommodated students' specific talents observed substantial improvements in subject mastery, assessment scores, and learning retention. Their findings indicate that talent-aligned instructional approaches reduce cognitive barriers to learning by allowing students to leverage their natural strengths while systematically addressing areas needing development. When educational strategies align with students' talent profiles, cognitive resources are optimized rather than divided between processing content and compensating for mismatched instructional approaches.

Abdullahi and Sotayo (2021) emphasize that formal talent promotion programs create academic performance benefits that extend beyond the talented individuals to influence entire learning communities. Their research demonstrates that talent management initiatives foster peer

learning environments where knowledge and skills transfer naturally between students with complementary abilities. They note that classrooms implementing talent management principles show higher collective achievement as students learn to recognize and leverage each other's strengths in collaborative contexts.

Furthermore, Jimoh and Kee (2022) establish a direct connection between talent management and performance outcomes, noting that systematic talent development reduces learning barriers while increasing academic self-efficacy. Students who receive recognition and support for their specific talents develop stronger academic identities and greater confidence in tackling challenging material. Friday and Sunday (2019) reinforce this perspective, noting that talent management approaches create powerful intrinsic motivation that drives sustained effort and persistence in academic pursuits, ultimately yielding measurable performance improvements across assessment metrics, knowledge application tasks, and long-term learning retention.

Increased Student Engagement and Motivation: Effective talent management significantly enhances student engagement and motivation by creating educational experiences that resonate with learners' inherent interests, abilities, and aspirations. When students' unique talents receive recognition and deliberate cultivation, they develop stronger psychological connections to their learning environments and invest more deeply in educational pursuits. According to Friday and Sunday (2019), talent management practices activate powerful intrinsic motivation factors including autonomy, mastery orientation, and purpose-driven learning. Their research demonstrates that when educational institutions acknowledge and nurture students' specific talents, learners develop stronger self-efficacy and greater willingness to persist through challenges.

Jimoh and Kee (2022) emphasize that talent-aligned educational approaches substantially reduce amotivation and disengagement by creating clear connections between students' natural inclinations and formal learning experiences. Their research indicates that when students can apply their distinctive abilities within educational contexts, they experience greater flow states—characterized by deep concentration, loss of self-consciousness, and intrinsic enjoyment of learning activities. These psychological states correlate strongly with sustained effort, deeper information processing, and stronger retention of learned content.

Yusuf and Agbara (2016) found that teachers in Ondo State secondary schools who successfully identified and managed student talents observed marked improvements in classroom participation, homework completion, and voluntary extension activities. Their research revealed that talent recognition creates positive feedback loops where initial acknowledgment leads to increased effort, which produces improved performance, further reinforcing engagement. They note that talent management approaches are particularly effective at reengaging previously marginalized or underperforming students by highlighting strengths that may have been overlooked in traditional academic evaluations.

Abdullahi and Sotayo (2021) argue that formal talent promotion programs systematically develop motivational factors including goal orientation, achievement motivation, and growth mindset. Their research demonstrates that when educational institutions implement comprehensive talent management systems, students develop clearer connections between current learning experiences and future aspirations. Abdullah and Abubakar (2017) reinforce this perspective, noting that talent management creates educational environments where students experience greater psychological safety, authentic belonging, and personal validation—all

critical foundations for sustained engagement and intrinsic motivation across diverse learning contexts.

Enhanced Creativity and Innovation: The purposeful management of student talents catalyzes significant improvements in creativity and innovation throughout educational ecosystems. When institutions implement comprehensive talent development approaches, they create environments where creative thinking flourishes, novel solutions emerge, and intellectual risk-taking becomes normalized. Abdullah and Abubakar (2017) establish that strategic talent management creates the psychological safety necessary for creative expression by validating divergent thinking, rewarding originality, and building cultures that tolerate productive failure as part of the innovative process. Their theoretical framework emphasizes that educational institutions must deliberately nurture creative capabilities through both specialized programming and integration of creative approaches across standard curricula.

Research by Yusuf and Agbara (2016) reveals that teachers who successfully identify and manage creative talents observe substantial improvements in students' ideational fluency, conceptual flexibility, and problem-solving originality. Their study in Ondo State secondary schools demonstrates that when creative talents receive explicit recognition and deliberate development, students produce more sophisticated creative outputs and demonstrate greater willingness to pursue unconventional approaches to academic challenges. They emphasize that creativity management requires specialized teacher training to recognize and nurture diverse expressions of creative potential.

Abdullahi and Sotayo (2021) highlight that formal talent promotion programs focused on creativity establish innovation ecosystems where creative processes become institutionalized and systematically developed. Their research indicates that comprehensive creativity management approaches yield benefits including increased interdisciplinary thinking, more sophisticated synthesis of disparate knowledge domains, and greater adaptability to novel academic challenges. They note that creativity-focused talent management extends beyond traditional artistic domains to foster innovative thinking across mathematics, sciences, humanities, and technical subjects.

Friday and Sunday (2019) establish connections between talent management practices and organizational innovation capacity, noting that institutions fostering creative talent gain significant advantages in adaptability, problem-solving capabilities, and generation of novel solutions. Their research, though focused on organizational contexts, provides valuable insights for educational settings, demonstrating that creative talent management creates self-reinforcing cycles of innovation where creative successes inspire further creative exploration. Jimoh and Kee (2022) reinforce this perspective, emphasizing that effective talent management approaches balance creative freedom with structured development processes, creating environments where creativity becomes both more prolific and more disciplined in addressing meaningful challenges.

Better Preparation for Future Careers: Systematic management of student talents significantly enhances preparation for future careers by developing specialized capabilities, fostering professional mindsets, and creating authentic connections between educational experiences and workplace requirements. When educational institutions implement comprehensive talent development programs, students acquire differentiated skill profiles that align with emerging workforce needs while building adaptable mindsets essential for navigating rapidly changing career landscapes. According to Jimoh and Kee (2022), effective talent

management approaches bridge theoretical knowledge and practical application, creating graduates who can seamlessly transition between educational contexts and professional environments. Their research emphasizes that career preparation requires both technical competence and transferable meta-skills including adaptability, self-directed learning, and contextual problem-solving.

Friday and Sunday (2019) highlight that strategic talent management creates powerful career advantages through specialization, providing students with distinctive capabilities that differentiate them in competitive job markets. Their research demonstrates that when educational institutions deliberately identify and cultivate specific talents, students develop professional identities anchored in authentic strengths rather than generic qualifications. They note that talent-aligned career pathways create stronger person-environment fit, leading to greater job satisfaction, better performance, and reduced turnover in subsequent professional roles.

Research by Abdullahi and Sotayo (2021) establishes that formal talent promotion programs systematically develop career readiness through specialized training pathways, industry partnerships, and competency-based assessment approaches. Their findings indicate that talent management creates powerful bridges between educational institutions and employers by focusing development efforts on capabilities most valued in contemporary and emerging workplaces. They emphasize that effective talent management approaches balance specialization with foundational skill development, creating graduates who possess both distinctive capabilities and adaptable mindsets.

Abdullah and Abubakar (2017) provide a theoretical framework that positions talent management as a strategic imperative for educational institutions seeking to enhance graduate employability. Their perspective emphasizes that institutions must align talent development approaches with workforce trends, creating educational experiences that anticipate rather than merely respond to employer requirements. Yusuf and Agbara (2016) reinforced this view through their research in Ondo State secondary schools, finding that teachers who successfully identify and develop student talents create powerful foundations for career success by nurturing professional attitudes, specialized capabilities, and self-awareness regarding strengths and development needs of all essential elements for navigating complex career pathways in contemporary economic landscapes.

Challenges to Effective Management of Student Talents in Enhancing Academic Performance

Despite the importance of managing student talents to enhance academic performance, numerous challenges hinder the effective realization of this goal. Educational institutions, policymakers, and educators face various obstacles that limit their ability to identify, nurture, and utilize student talents. This section examines the challenges that impede the effective management of student talents, including inadequate resources, insufficient teacher training, and systemic barriers. Educators and policymakers can develop targeted strategies to overcome them and create an environment that supports the growth and development of student talents.

Identification Bias: Traditional talent identification methods often reflect cultural and socioeconomic biases, overlooking exceptional potential in underrepresented student populations. Assessment tools may prioritize specific manifestations of talent while failing to recognize diverse expressions of ability, resulting in inequitable access to talent development opportunities and reinforcing existing educational disparities.

Resource Constraints: Limited financial, human, and material resources hinder comprehensive talent management implementation in educational institutions. Insufficient funding for specialized programs, inadequate teacher training in differentiated instruction, and lack of appropriate learning materials create barriers to effective talent development. These constraints particularly impact disadvantaged schools serving students with significant untapped potential.

Standardized Curriculum Pressures: High-stakes accountability systems and rigid curricular requirements often constrain teachers' ability to implement flexible, talent-responsive instructional approaches. Pressure to cover mandated content at predetermined paces limits opportunities for depth, complexity, and creative exploration that talented students require, resulting in underachievement and disengagement despite exceptional potential.

Inadequate Teacher Preparation: Many educators receive insufficient preservice and in-service training in talent identification and development strategies. Without specialized knowledge in recognizing diverse manifestations of exceptional ability and implementing appropriate differentiation techniques, teachers may fail to provide optimal learning experiences for talented students, leading to performance below capability despite significant potential.

CONCLUSION

The paper concluded that talent management principles and academic performance enhancement in educational settings. The examination of existing literature reveals that effective talent management encompassing identification, development, and utilization strategies creates significant opportunities for optimizing student learning outcomes across diverse educational contexts. Institutions can systematically nurture exceptional student potential in ways that enhance both individual achievement and institutional effectiveness. The evidence presented demonstrates that comprehensive talent management approaches yield multiple benefits for student academic performance. When educators employ systematic identification methods that recognize diverse manifestations of exceptional ability, they create equitable opportunities for talent development across student populations. Strategic development initiatives including mentoring relationships, differentiated instruction, and personalized learning pathways enable students to transform potential into demonstrable performance. Thoughtful utilization approaches provide meaningful contexts for applying exceptional abilities, reinforcing learning through authentic application while contributing to the broader educational community. Despite implementation challenges, including resource constraints, assessment limitations, and competing institutional priorities, the research supports the fundamental premise that talent management represents a valuable framework for educational enhancement. Effective talent management thus emerges not merely as an educational strategy but as an ethical imperative for systems committed to developing the diverse talents that will shape our collective future.

Suggestions

The following strategies can be applied to overcome the challenges of managing student talents

- Educational institutions, school leaders and teachers, policymakers should use diverse evaluation methods to identify and recognize student talents, including non-traditional measures such as portfolio assessments, performance tasks, and student inventories.
- Educational institutions, school leaders, teachers and community partners should provide targeted support and resources to nurture student talents, including cross-institutional collaborations, digital platforms, and open educational resources.
- Teachers, school leaders, educational institutions and curriculum developers should use curriculum compacting, depth and complexity frameworks, and interdisciplinary units to integrate talent development within existing curriculum frameworks.
- School leaders, educational institutions, universities and professional development providers should ensure they focus on talent management, identification, differentiation, and talent-responsive pedagogy to equip educators with the skills and knowledge needed to support student talents.

ABSTRACT

This paper examined the relationship between the politics of course allocation and quality service delivery in universities, with particular focus on the Nigerian higher education context. Drawing from theoretical frameworks, the research investigates how various forms of political influence, including departmental power dynamics, gender politics, seniority systems, patronage networks, and disciplinary boundary disputes, shape the distribution of teaching responsibilities in university settings. The paper revealed that politicizing allocation practices creates significant barriers to educational quality by generating uneven faculty workloads, misaligning teaching expertise with course assignments, distributing resources inequitably, compromising academic standards, and impeding curricular innovation. These dynamics produce cascading consequences affecting multiple stakeholders: students experience inconsistent educational quality and inequitable learning opportunities; faculty suffer professional stagnation and workplace dissatisfaction; and institutions face diminished academic standing and eroded public trust. The paper concluded that course allocation represents not merely an administrative function but a critical educational process with far-reaching implications for institutional effectiveness. The paper suggested that universities must implement transparent, merit-based allocation frameworks, strengthen faculty governance structures, conduct regular academic audits, integrate student feedback into decision-making, and explore technology-assisted allocation systems to mitigate political influences that undermine educational quality and institutional mission fulfillment.

INTRODUCTION

Universities stand as pillars of intellectual advancement, cultural preservation, and socioeconomic development in any society. These institutions serve as crucibles where knowledge is generated, refined, and disseminated to produce competent human capital necessary for national development. The university as an institution is designed to achieve three core objectives: teaching, research, and community service. However, the extent to which these

objectives are achieved depends significantly on the quality of service delivery within the system. Quality service delivery in universities encompasses effective teaching, efficient administration, adequate infrastructure, and equitable resource allocation, including the allocation of courses to academic staff (Major-Jack, 2025).

Course allocation, though seemingly a routine administrative function, has profound implications for the quality of teaching and learning experiences. It involves assigning modules or courses to academic staff based on their expertise, experience, and sometimes, preferences (Moses & Kingsley, 2013). However, this process seldom occurs in a vacuum; it is often influenced by power dynamics, personal relationships, and competing interests in other words, politics. The politics of course allocation refers to the interplay of power relations, influence, and interests that shape decisions regarding which lecturer teaches what course.

Meanwhile, the manner in which courses are allocated can either enhance or undermine quality service delivery in universities. When courses are allocated based on merit, expertise, and competence, the quality of teaching and learning is likely to be high (Munene, 2022). Conversely, when allocation is driven primarily by political considerations such as favoritism, patronage, or appeasement, quality may be compromised. Thus, the politics of course allocation can significantly impact quality service delivery in universities, affecting not only teaching and learning outcomes but also institutional reputation and graduate competitiveness.

Politics in university administration is not a new phenomenon. According to Babalola and Emunemu (2008), politics has been a defining feature of university governance in Nigeria since the colonial era. They assert that "the politics of university administration has evolved, manifesting in various forms including resource allocation, appointment to positions, and academic decisions" (p. 224). This observation underscores the pervasiveness of politics in virtually all aspects of university administration, including course allocation.

The politics of course allocation manifests in various ways. First, powerful professors or heads of departments may monopolize 'prestigious' courses, leaving less experienced or junior colleagues with basic or introductory courses. Second, courses may be allocated based on personal relationships rather than expertise, leading to situations where lecturers teach courses outside their areas of specialization. Third, the allocation may be influenced by external political factors, especially in public universities where government interference is common. Giami and Igbudu (2023) observed that "political interference in university administration has extended to academic decisions, including curriculum development and implementation" (p. 360).

The implications of politically motivated course allocation for quality service delivery are profound. When courses are allocated based on factors other than merit and expertise, the quality of teaching may suffer. Students may receive substandard instruction from lecturers who lack the requisite knowledge or passion for the courses they teach. This can lead to poor learning outcomes, graduate incompetence, and ultimately, a decline in the university's reputation.

Additionally, politically-motivated course allocation can generate feelings of resentment and unfairness among academic staff, leading to low morale and reduced commitment to teaching excellence. Ekpenyong and Ojeaga (2022) opined that "institutional politics in Nigerian universities has been associated with reduced job satisfaction, commitment, and productivity among academic staff" (p. 15). This implies that the politics of course allocation may indirectly affect quality service delivery by creating a toxic work environment that undermines staff motivation and performance. Furthermore, the politics of course allocation can lead to inefficient resource utilization. When courses are allocated based on political considerations rather than expertise, the university fails to optimally leverage the specialized knowledge and skills of its

academic staff. This represents a waste of human resources and can undermine the quality of education offered to students.

However, it is important to note that politics in course allocation is not inherently negative. When managed properly, it can serve as a mechanism for balancing competing interests and ensuring equitable distribution of teaching responsibilities. The challenge lies in ensuring that political considerations do not override merit, expertise, and the ultimate goal of providing quality education to students. To mitigate the negative impact of politics on course allocation and enhance quality service delivery, universities need to establish transparent and objective criteria for allocating courses. These criteria should prioritize expertise, experience, and teaching effectiveness over political considerations. Additionally, universities should implement robust quality assurance mechanisms to monitor teaching quality and ensure that political influences do not compromise educational standards.

Effective management of university resources is also crucial for quality service delivery. Amanchukwu and Ololube (2015) emphasized the importance of effective resource management in educational institutions, stating that "the quality of education delivered is directly proportional to the quality and quantity of resources available and how efficiently they are managed" (p. 97). This underscores the need for universities to ensure that human resources, particularly academic staff, are deployed optimally through merit-based course allocation. Moreover, universities must embrace innovative approaches to enhance service delivery. The role of leadership in managing the politics of course allocation cannot be overstated. University administrators must demonstrate strong leadership by making fair and transparent decisions regarding course allocation, even in the face of political pressure.

Akpaasou (2017) observed that "effective educational leadership involves making decisions that prioritize educational quality over political expediency" (p. 45). This suggested that university leaders can mitigate the negative impact of politics on course allocation by consistently prioritizing educational quality in their decisions. In essence, the politics of course allocation represents a significant challenge to quality service delivery in universities. When courses are allocated based on political considerations rather than merit and expertise, the quality of teaching and learning may be compromised. However, with transparent allocation criteria, effective resource management, innovative approaches, and strong leadership, universities can manage the politics of course allocation to enhance rather than undermine quality service delivery. As Wejinya (2024) aptly put it, "the quality of education delivered is a function of how well educational resources are managed amid competing interests and pressures" (p. 410). Therefore, universities must strive to balance political considerations with the imperative of providing quality education to students, who are the primary stakeholders in the education system.

THEORETICAL FRAMEWORK

Karl Marx Conflict Theory

Conflict theory, as posited by Karl Marx, emerged in the mid-19th century as a response to the dramatic social changes brought about by industrial capitalism. Marx developed this theoretical framework by observing the stark inequalities and class antagonisms that characterized European industrial societies. His analysis positioned economic conflict as the fundamental driver of social

change and historical development, establishing a perspective that would profoundly influence sociological thought (Adetunberu & Bello, 2018).

The origin of conflict theory lies in Marx's critique of capitalism and his analysis of class relations. Marx argued that throughout human history, society has been marked by class struggle between those who control the means of production (bourgeoisie) and those who sell their labor (proletariat). This perspective on historical materialism suggested that material conditions and economic relationships determine social structures, ideologies, and historical trajectories. While Marx concentrated primarily on economic class conflict, subsequent theorists expanded the scope to include various forms of social antagonism beyond class, incorporating dimensions such as status, power, race, gender, religion, and ethnicity.

The fundamental premise of conflict theory is that society exists in a constant state of conflict due to competition over limited resources. This perspective views social order as maintained not through consensus but through power and domination. Several core attributes define conflict theory. First, resource scarcity and competition generate conflict between social groups. As Adetunberu and Bello (2018) noted in their analysis of Niger Delta conflicts, "resource control and allocation remain central to understanding protracted social conflicts, particularly in resource-rich regions where benefits are inequitably distributed" (p. 118).

Power dynamics constitute a second crucial element, with Kolawole et al. (2024) emphasizing that "power asymmetries between groups significantly shape the trajectory and intensity of social conflicts" (p. 94). Groups with greater access to resources maintain their privileged position by using their power to influence social institutions and control the dominant narrative. Structural inequality represents a third core attribute, as conflict theory posits that social institutions are structured to maintain inequality, serving the interests of dominant groups while disadvantaging others. These structures are reinforced through various mechanisms including law, education, religion, and media, creating systems that perpetuate existing power arrangements.

Unlike functionalist perspectives that view stability as the norm, conflict theorists see social change as inevitable and resulting from struggle between opposing interests. Marx predicted that class consciousness would eventually lead the proletariat to revolt against the bourgeoisie, resulting in revolutionary change. This perspective on change through conflict constitutes a fourth defining attribute of the theory. Finally, Marx employed Hegel's concept of dialectics to explain how conflict drives historical development through the tension between thesis (existing social arrangements), antithesis (opposition to these arrangements), and synthesis (new social order emerging from conflict). Bakare (2021) connects these core attributes to contemporary conflict analysis, noting that "while Marx's original formulation focused on class antagonism, modern conflict theory has been adapted to explain a variety of social conflicts ranging from ethnic tensions to resource disputes and identity conflicts" (p. 315).

Conflict theory offers several analytical strengths that have contributed to its enduring influence in sociology and political science. Its structural analysis effectively identifies systemic sources of social problems rather than focusing solely on individual factors. This macro-level approach helps explain persistent inequalities and power imbalances in society. By questioning existing social arrangements rather than accepting them as natural or inevitable, conflict theory provides a critical lens for examining power relationships and structural inequalities. Jah et al. (2023) noted that "conflict theory's critical stance allows for deeper interrogation of the socio-political structures that perpetuate identity-based conflicts in multi-ethnic societies" (p. 75).

The theory situates social phenomena within their historical context, recognizing that current social arrangements result from historical processes and power struggles. This historical perspective provides depth to social analysis and prevents ahistorical interpretations of social phenomena. Conflict theory effectively explains major social transformations and revolutions by highlighting the role of group interests and power struggles in driving historical change, offering powerful explanatory tools for understanding social movements and political upheavals.

Furthermore, the theory has been successfully applied to analyze various modern conflicts, from labor disputes to ethnic tensions and resource conflicts. Adetunberu and Bello (2018) demonstrated this in their application of conflict theory to explain agitations in the Niger Delta, noting that "the framework of conflict theory illuminates how competition over oil resources has shaped political dynamics and social movements in the region" (p. 119). This applicability to contemporary issues underscores the theory's continued relevance in modern social analysis.

Despite its analytical utility, conflict theory has several limitations that have drawn criticism. Marx's original formulation has been criticized for economic reductionism, overemphasizing economic factors while underplaying the importance of other social dimensions such as culture, identity, and religion. Bakare (2021) argued that "purely economic explanations fail to capture the complexity of protracted social conflicts, which often involve deeply held identities and values beyond material interests" (p. 316). The theory tends to neglect cooperation, underestimating the role of consensus and shared values in maintaining social order. Kolawole et al. (2024) highlight that "while conflict is undoubtedly present in social relations, cooperative mechanisms also exist that mitigate outright antagonism" (p. 95). This neglect of cooperation represents a significant limitation in the theory's explanatory power.

Conflict theory also struggles to explain periods of relative social stability and the absence of open conflict despite persistent inequalities. Critics argue that the theory's expectation of constant conflict does not match observed social reality, where societies often experience extended periods of stability despite containing significant inequalities and potential sources of conflict. The deterministic view presented in Marx's original formulation, particularly his prediction of inevitable proletarian revolution, has not materialized in many advanced capitalist societies. This suggests that the theory may be too deterministic in its understanding of historical development, failing to account for the adaptability of capitalist systems and the capacity for reform within existing social structures.

Finally, testing conflict theory empirically presents significant methodological challenges due to its broad scope and focus on historical processes rather than immediately observable phenomena. This makes it difficult to subject the theory to rigorous empirical testing, limiting its scientific validity in some contexts. Despite these limitations, Jah et al. (2023) argued that "despite its shortcomings, conflict theory remains indispensable for understanding identity conflicts in diverse societies, particularly when complemented by other theoretical perspectives" (p. 77). Modern applications of conflict theory have extended beyond Marx's original focus on class to address various forms of social conflict, demonstrating the theory's adaptability and continuing relevance.

Contemporary theorists have incorporated insights from psychology, identity studies, and international relations to develop more nuanced understandings of conflict. These developments have enhanced the theory's explanatory power while addressing some of its original limitations, ensuring that conflict theory remains a vital perspective in sociological analysis and social criticism.

Conflict theory provides a valuable theoretical framework for analyzing the politics of course allocation and its impact on quality service delivery in universities. The theory's emphasis on resource competition, power dynamics, and structural inequality directly aligns with the complex political landscape of university administration. Universities represent microcosms of broader society where limited resources including prestigious courses, favorable teaching schedules, and research opportunities are objects of competition among faculty members. Through the lens of conflict theory, course allocation can be understood as a process influenced by power relations rather than merely administrative decisions. Senior professors and administrators, as the dominant group, may leverage their positions to secure preferred courses while relegating less desirable ones to junior faculty, creating a structural inequality that mirrors Marx's class-based analysis.

The theory also illuminates how institutional structures in universities can perpetuate inequalities in course distribution. As formal and informal policies evolve to favor certain groups whether based on seniority, research productivity, or personal relationships, these structures become mechanisms for maintaining the status quo, similar to how conflict theorists view societal institutions as reinforcing existing power arrangements. Furthermore, conflict theory explains how competing interests among departmental factions, disciplinary specializations, and administrative units shape course allocation processes. These conflicts directly impact service delivery quality when courses are assigned based on political considerations rather than pedagogical expertise, potentially compromising educational outcomes for students.

The dialectical process central to Marx's theory applies to university settings where thesis (existing allocation practices), antithesis (challenges from disadvantaged faculty), and synthesis (policy reforms) drive institutional change. This process explains how universities evolve their course allocation practices over time in response to internal conflicts. More so, with this theory, university administration, researchers can move beyond viewing course allocation as a neutral administrative function and instead recognize it as a politically charged process with significant implications for educational quality, institutional equity, and organizational health—ultimately affecting the university's ability to fulfill its core teaching, research, and service missions.

CONCEPTUAL CLARIFACTION

Course Allocation in Universities

Course allocation in universities represents a critical administrative function with significant implications for teaching quality, resource utilization, and faculty satisfaction. Several researchers have examined this process, proposing various methodologies and frameworks to optimize its effectiveness and efficiency. Amuji et al. (2017) advance the application of dynamic programming as a structured approach to course allocation in Nigerian universities. Their research posits that course allocation should be conceptualized as a multi-stage decision-making process where each allocation decision affects subsequent possibilities and constraints. They argued that "dynamic programming provides a mathematical framework for making a sequence of interrelated decisions that optimize the overall outcome" (p. 178). This perspective emphasizes the interconnected nature of course allocation decisions, where the assignment of one course to a particular lecturer influences the options available for subsequent allocations.

The authors highlight several constraints that must be considered in course allocation, including lecturer expertise, workload considerations, scheduling conflicts, and departmental

priorities. They note that traditional approaches to course allocation in Nigerian universities often rely on departmental meetings where courses are distributed based on negotiation, seniority, or historical precedent. This approach, while common, frequently leads to suboptimal allocations that may not align with institutional objectives or individual competencies. The dynamic programming enables administrators to systematically work through allocation decisions with an awareness of their cumulative impact. Amuji et al. (2017) suggest that this approach "allows for the efficient distribution of courses while satisfying multiple constraints simultaneously" (p. 180). Their research demonstrates that dynamic programming can generate allocation schedules that balance departmental needs, faculty preferences, and institutional requirements more effectively than traditional methods.

Inegbedion (2017) approaches course allocation from the perspective of academic workload planning, particularly in the context of open and distance learning institutions. Drawing on the experience of the National Open University of Nigeria (NOUN), Inegbedion conceptualizes course allocation as an integral component of academic workload management. The author argues that "effective workload planning requires a holistic perspective that considers teaching, research, administrative responsibilities, and community service" (p. 315). In Inegbedion (2017), course allocation in distance education presents unique challenges due to the nature of instructional delivery, course development requirements, and student support functions. The research highlights the multifaceted role of faculty in ODL institutions, where responsibilities extend beyond traditional classroom teaching to include content development, online facilitation, and tutorial support. Consequently, "course allocation must account for the diverse responsibilities of faculty members and the varying time demands of different course formats" (p. 321).

The study proposes a workload formula that quantifies various academic activities to ensure equitable distribution of responsibilities. This formula incorporates factors such as student numbers, course credit units, delivery mode, and administrative duties to calculate appropriate teaching loads. Inegbedion emphasizes that "transparent and objective criteria for workload allocation contribute to faculty satisfaction and institutional effectiveness" (p. 325). This perspective frames course allocation as part of a broader workload management system that seeks to balance individual capabilities, institutional needs, and educational quality.

Ekhosuehi (2016) argued that "linear programming provides a rigorous mathematical foundation for course allocation decisions, enabling administrators to achieve optimal solutions that satisfy multiple criteria" (p. 405). The research formulates course allocation as a linear programming model with an objective function that minimizes the total deviation between actual teaching loads and desired teaching loads. Constraints in the model include minimum and maximum teaching hours, lecturer qualifications, and course requirements. Ekhosuehi demonstrates that this approach "enables departments to allocate courses in a manner that respects faculty preferences while ensuring all courses are covered by qualified instructors" (p. 408).

These diverse perspectives on course allocation whether through dynamic programming, workload planning, or linear programming share a common emphasis on moving beyond traditional, often politically influenced allocation practices toward more structured, objective methodologies. They recognize that effective course allocation requires balancing multiple factors and constraints while serving the ultimate goal of educational quality and institutional effectiveness.

POLITICS OF COURSE ALLOCATION IN NIGERIAN UNIVERSITIES

The politics of course allocation in Nigerian universities represents a complex interplay of power dynamics, competing interests, and institutional factors that significantly influence academic decision-making processes. Beyond the technical and administrative dimensions of course distribution lies a political landscape shaped by various stakeholders with divergent interests and objectives. Oyedeji (2018) conceptualizes the politics of course allocation as an inevitable outcome of resource competition within academic institutions. In his study of three federal universities in southwestern Nigeria, he argues that "course allocation has evolved beyond a mere administrative exercise into a political process where influence, status, and relationships determine outcomes as much as expertise and qualifications" (p. 47). His research reveals that departmental politics frequently manifest in preferential treatment for certain faculty members, with senior professors often securing preferred courses while junior academics receive less desirable teaching assignments regardless of their specialization or competence.

The political dimension of course allocation is further emphasized by Nweke and Ihejirika (2022) who examine how power relations shape departmental decision-making. Their qualitative study across five Nigerian universities identifies several political factors that influence course allocation, including "patronage networks, factional alignments, and proximity to administrative power centers" (p. 132). They observe that "department heads often use course allocation as a tool for rewarding loyalty or punishing perceived opposition, creating an environment where academic considerations are sometimes subordinated to political calculations" (p. 135). This perspective highlights how course allocation becomes an instrument for exercising and maintaining power within academic departments.

Olasunkanmi and Musa (2020) approach the politics of course allocation through the lens of institutional culture, arguing that universities develop distinct political traditions that govern resource distribution. Their comparative analysis of public and private universities in Nigeria reveals significant differences in how course allocation politics manifest across institutional types. They note that "while public universities exhibit more overt political contestation over course allocation, private institutions tend to mask political processes beneath administrative directives, though political considerations remain influential in both contexts" (p. 218). Particularly insightful is their observation that "the politics of course allocation often reflects broader societal patterns of patronage and influence-peddling that permeate Nigerian institutions" (p. 221), suggesting that these practices are embedded in wider cultural and political contexts.

The gendered dimension of course allocation politics is examined by Adebayo and Ogundipe (2023) who analyze how gender dynamics influence teaching assignments. Their mixed-methods study across multiple Nigerian universities documents systematic disparities in how courses are allocated to male and female academics. They argue that "female academics frequently encounter subtle forms of discrimination in course allocation, being disproportionately assigned introductory courses and higher teaching loads while male colleagues secure advanced courses that enhance their professional standing" (p. 83). This research reveals how course allocation politics can reinforce existing gender inequalities in academia, limiting career advancement opportunities for female faculty members.

The political nature of course allocation extends beyond individual departments to influence larger institutional dynamics. As Nweke and Ihejirika (2022) observe, "departmental politics around course allocation often escalate into faculty-wide or even university-wide

conflicts when perceived inequities become systemic" (p. 137). These conflicts can undermine institutional cohesion and academic quality when teaching assignments are determined by political considerations rather than educational objectives. However, understanding these political dimensions is essential for developing more equitable and effective approaches to course allocation that prioritize educational quality while acknowledging the inevitability of political processes in university administration. As Olasunkanmi and Musa (2020) admitted, reforms to course allocation systems must address not only technical aspects but also the underlying political realities that shape how academic resources are distributed" (p. 225).

TYPES OF POLITICS IN COURSE ALLOCATION (DEPARTMENTAL AND FACULTY)

Course allocation is a critical aspect of academic administration, influencing the quality of education, faculty workload, and student experience. However, beneath the surface of seemingly neutral allocation processes lies a complex web of politics, power struggles, and competing interests. The various types of politics that shape course allocation at the departmental and faculty levels are:

Gender Politics in Course Allocation: Gender politics significantly shapes course allocation in universities, creating and reinforcing inequities between male and female academics. As Adebayo and Ogundipe (2023) demonstrate through their feminist analysis, course allocation often reflects entrenched gender biases. Female academics frequently receive heavier teaching loads with introductory or ‘soft’ courses that carry less prestige but demand more time for grading and student support. Meanwhile, male colleagues tend to secure advanced courses with smaller class sizes, greater intellectual prestige, and better alignment with research interests. This gendered distribution masks itself as merit-based but perpetuates structural inequalities.

The politics operates through informal networks and mentorship systems that predominantly benefit male academics. Department heads and senior faculty positions historically dominated by men exercise significant discretion in course assignments. Female academics often face a double bind: they must teach more to prove their competence while simultaneously having less time for research and publishing that would advance their careers. The workload imbalance created through gendered course allocation contributes to slower promotion rates for women and their underrepresentation in senior academic positions.

These gender politics extend beyond straightforward discrimination to include subtle expectations about which courses are "appropriate" for women to teach. Courses related to care, education, or social services are disproportionately assigned to female faculty, while technical, theoretical, or quantitative courses more often go to males, regardless of actual expertise. The outcome is a system where course allocation becomes a mechanism for reproducing gender hierarchies within academic institutions, limiting opportunities for female academics to establish themselves in high-status academic areas and reinforcing stereotypes about gendered intellectual abilities.

Departmental Resource Politics: Course allocation serves as a critical battleground for scarce departmental resources (Olasunkanmi & Musa, 2020). Departments with prestigious or high-enrollment courses gain leverage when negotiating for institutional resources, creating intense competition. This resource-focused politics manifests through strategic maneuvering where departments attempt to claim ownership over interdisciplinary courses, particularly those that

attract large student numbers. Department chairs strategically allocate courses to justify requests for additional faculty positions, larger office spaces, or increased budgets. Popular courses become departmental assets that leaders protect and promote to strengthen their position within the university. This politics extends to scheduling conflicts, where prime teaching slots (midday hours and certain weekdays) become contentious resources allocated based on departmental clout rather than pedagogical needs.

The politics intensifies during curriculum reforms when departments may fight to maintain control over traditional course offerings while simultaneously attempting to expand into emerging fields. Senior faculty often leverage their influence to shape these decisions, sometimes prioritizing departmental expansion over student needs or institutional efficiency. Department heads engage in complex negotiations with deans and other department chairs, trading course offerings, sharing teaching responsibilities, or forming strategic alliances to maximize their resource share. This creates a landscape where course allocation decisions reflect power dynamics between academic units rather than purely educational considerations, ultimately influencing everything from budget distributions to physical space allocations within the university.

Seniority and Hierarchical Politics: University course allocation frequently operates through entrenched hierarchical systems where seniority trumps other considerations, as Nweke and Ihejirika (2022) explored in their analysis of power dynamics in academic decision-making. This politics functions through an unofficial but widely recognized "pecking order" where professors select their preferred courses first, followed by associate professors, assistant professors, and finally, junior lecturers and graduate teaching assistants. The result is a system where newer faculty regularly receive the least desirable courses, those that are scheduled at inconvenient times, requiring extensive preparation, or featuring very large class sizes.

This seniority-based politics creates situations where long-serving faculty members claim ownership over particular courses, teaching them repeatedly for years or even decades, regardless of whether their expertise remains current. Course allocation meetings often feature ritualized deference to senior academics, whose preferences receive minimal questioning. Junior faculty hesitate to challenge these arrangements for fear of damaging relationships with powerful senior colleagues who will eventually evaluate their tenure applications.

The hierarchical politics extends beyond simple course assignments to influence which faculty teach graduate versus undergraduate courses, with graduate teaching generally reserved for senior faculty despite the potential benefits of exposing graduate students to newer research perspectives. Department heads, caught between institutional demands for efficient resource allocation and pressure from senior colleagues, often take the path of least resistance by maintaining existing hierarchical arrangements. This creates a self-perpetuating system where junior faculty must "pay their dues" through years of teaching less desirable courses before earning the right to preferred assignments, regardless of their teaching effectiveness or scholarly expertise in particular subject areas.

Merit-Based Politics Versus Patronage: The tension between merit-based allocation and patronage systems forms a central political dynamic in course distribution. Oyedeji (2018) noted that most institutions claim to allocate courses based on faculty expertise, teaching evaluations, and academic qualifications. In practice, however, course allocation often operates through

complex patronage networks where personal relationships, political alignments, and loyalty to departmental leadership determine who teaches which courses.

Department heads and senior faculty distribute desirable courses as rewards to allies and supporters, creating informal patronage systems that may undermine stated institutional values of meritocracy. Faculty members actively cultivate relationships with decision-makers, sometimes volunteering for committee work or administrative tasks to gain favor. Those perceived as outsiders or critics may find themselves consistently assigned to less desirable courses regardless of their qualifications or teaching effectiveness.

This politics becomes particularly evident during leadership transitions, when new department heads or deans redistribute courses to signal changes in departmental priorities and reward supporters. The resulting system creates incentives for faculty to engage in political maneuvering rather than focusing on teaching excellence or scholarly development. Faculty members recognize that challenging these arrangements risks professional isolation, creating a culture of compliance where merit criteria are publicly praised but privately subordinated to political considerations. The paradox is that while universities publicly champion meritocratic principles in their policies and mission statements, the actual practice of course allocation often reveals a much more politically mediated process that rewards institutional loyalty above pedagogical fitness.

Disciplinary Boundary Politics: Course allocation frequently becomes a battleground for establishing and defending disciplinary boundaries, influencing the intellectual direction of academic programs. As Ekhosuehi (2016) added in his technical analysis of allocation methods, interdisciplinary subjects and emerging fields create particularly contested territory where multiple departments may claim jurisdiction. This politics manifests through departments strategically defining course content and titles to either stake claims on new subject areas or defend traditional disciplinary terrain.

Faculty members actively engage in this boundary work, arguing that particular courses belong within their discipline's intellectual domain. These arguments appeal to historical precedent, theoretical frameworks, and methodological approaches to justify departmental ownership. The politics becomes especially intense for courses in high-demand areas like data science, sustainability, or global studies, where multiple departments see opportunities for enrollment growth and institutional recognition.

The boundary politics extends beyond individual courses to influence entire curriculum structures, as departments strategically position prerequisite requirements and course sequences to channel students toward their offerings. Cross-listed courses become sites of negotiation over which department receives enrollment credits or teaching load recognition. Behind closed doors, senior faculty engage in territorial defenses of their discipline's intellectual scope, sometimes resisting innovations that blur traditional boundaries. These disciplinary politics have real consequences for students, who may find themselves caught between departmental territories and forced to navigate fragmented curriculum structures that reflect political compromises rather than coherent educational pathways. Department chairs must balance maintaining disciplinary integrity with adapting to evolving knowledge landscapes, making course allocation a continuous process of negotiating intellectual boundaries within the university.

Effects of Politicized Course Allocation on Quality Service Delivery

Uneven Faculty Workload Distribution

Politically motivated course allocation creates profoundly uneven workload distributions that undermine educational quality and faculty effectiveness. As Adebayo and Ogundipe (2023) demonstrate in their feminist analysis, the politics of course allocation often results in certain faculty members frequently women and junior academics shouldering disproportionately heavy teaching loads. These faculty find themselves responsible for large introductory courses with high enrollment numbers and substantial grading responsibilities, while others enjoy smaller, specialized courses that require less administrative effort. This uneven distribution extends beyond simple course numbers to include variations in course preparation requirements, student contact hours, and assessment responsibilities.

The consequences ripple throughout the educational ecosystem. Overburdened faculty struggle to provide timely feedback on assignments, maintain regular office hours, or develop innovative teaching approaches. The quality of instruction inevitably suffers when lecturers must divide their attention across excessive teaching commitments. Meanwhile, their research productivity declines as heavy teaching loads consume time that would otherwise go toward scholarly activities, creating a vicious cycle where diminished research output further weakens their position in future course allocation negotiations. This pattern creates two tiers of faculty: those with manageable workloads who can excel in both teaching and research, and those with excessive teaching responsibilities who struggle to meet expectations in either domain.

The problem intensifies when department heads allocate courses without transparent workload metrics, allowing political considerations to override equitable distribution principles. Olasunkanmi and Musa (2020) found that private universities sometimes implement more systematic workload calculations than public institutions, where traditional hierarchies and personal relationships more strongly influence allocation decisions. The resulting imbalance undermines institutional effectiveness by preventing optimal utilization of faculty expertise and contributing to burnout among overloaded instructors, ultimately compromising educational quality for students.

Misalignment between Faculty Expertise and Course Assignments

When political considerations override merit in course allocation, universities frequently experience significant misalignment between faculty expertise and teaching assignments. This misalignment, as Oyedeji (2018) noted, occurs when courses are distributed based on patronage, seniority, or departmental politics rather than instructional fit. Faculty members find themselves teaching subjects peripheral to their research specializations or educational background, forcing them to deliver content in which they lack depth of knowledge or pedagogical preparation.

This expertise-assignment gap manifests in multiple ways. Students receive instruction from professors who may be struggling to master the material themselves, resulting in superficial coverage of complex topics and an inability to connect course content to current developments in the field. Faculty teaching outside their expertise areas cannot easily incorporate research insights into their teaching, weakening the research-teaching nexus that characterizes quality higher education. Questions from students may receive inadequate responses, and learning activities lack the richness that comes from deep subject knowledge.

The politics of preference compounds this problem, as senior faculty often claim courses aligned with their interests regardless of whether those interests match their current expertise. According to Nweke and Ihejirika (2022), departmental power dynamics can result in senior academics teaching specialized courses they developed decades earlier, despite significant evolution in the field that they may not have followed. Meanwhile, newer faculty with current training in those areas find themselves teaching general courses where their specialized knowledge goes unutilized. This creates an irrational allocation of human capital where faculty teach what they have political rights to rather than what they know best. The institutional consequences include diminished educational quality, reduced student satisfaction, and inefficient utilization of academic expertise all stemming from allocation decisions driven by political considerations rather than educational objectives.

Inequitable Resource Distribution

Politically driven course allocation drives inequitable resource distribution that significantly undermines educational quality. As Olasunkanmi and Musa (2020) demonstrate in their comparative analysis, courses become proxies for resources, with politically powerful departments or faculty securing preferential access to teaching assistants, classroom technology, prime teaching spaces, and instructional support services. This resource inequality creates visible disparities in educational delivery that directly impact student learning experiences.

The politics play out through various mechanisms. Courses taught by senior professors or those with strong departmental backing receive priority scheduling in modern, well-equipped teaching spaces, while others are relegated to outdated facilities. Teaching assistant allocations follow similar patterns, with politically favored courses receiving adequate support staff while others operate with minimal assistance regardless of class size or instructional needs. The distribution of library resources, software licenses, laboratory equipment, and technical support similarly reflects political influence rather than pedagogical requirements.

These resource inequities create tiered educational experiences within the same institution. Students in well-resourced courses benefit from superior learning environments, more individualized attention, and better instructional materials. Meanwhile, those in under-resourced courses—often required foundational courses with large enrollments—encounter overcrowded conditions, limited access to materials, and faculty struggling to deliver quality instruction without adequate support. The problem intensifies in disciplines requiring specialized equipment or facilities, where access to resources directly determines the quality of practical training students receive.

Ekhosuehi (2016) asserted that more systematic approaches could distribute resources more equitably, but these technical solutions remain unimplemented when political considerations dominate. The resulting resource disparities not only compromise current educational quality but also create long-term inequities as students from under-resourced courses develop knowledge gaps that affect their performance in subsequent studies, extending the impact of politically motivated resource allocation well beyond the initial course experience.

Degradation of Academic Standards

Politicized course allocation contributes significantly to the degradation of academic standards through multiple interconnected mechanisms. When courses are assigned based on political

considerations rather than pedagogical fit, the resulting misalignments create pressure to modify academic expectations. As Nweke and Ihejirika (2022) observe, faculty teaching courses outside their expertise areas often adjust standards downward to compensate for their knowledge limitations, inadvertently compromising the intellectual rigor of their courses.

This standard erosion manifests in various ways. Assessment methods become less challenging when instructors lack confidence in their mastery of advanced content. Course materials may not reflect current disciplinary standards when faculty are unfamiliar with recent developments in the field. Learning objectives shift toward knowledge reproduction rather than critical application when instructors themselves struggle with the conceptual foundations of the subject. These individual compromises collectively weaken the overall academic standards of educational programs.

Political allocation further undermines standards through fragmentation of instructional responsibility. When multiple sections of the same course are taught by instructors with vastly different expertise levels a common outcome of politically influenced assignments maintaining consistent standards becomes nearly impossible. Grade disparities emerge between sections, assessment approaches vary dramatically, and students receive inconsistent preparation for subsequent coursework. The institutional response to these variations often involves standardizing assessments at the lowest common denominator to accommodate instructors with limited subject expertise.

Oyedeji (2018) added that patronage-based course allocation creates situations where faculty may feel pressured to maintain high passing rates to justify their continued assignment to desirable courses, further compromising evaluation standards. Meanwhile, the heavy workloads resulting from uneven allocation leave some faculty with insufficient time for thoughtful assessment, leading to simplified evaluation methods that fail to measure deeper learning. Together, these factors create a gradual but persistent erosion of academic standards that diminishes the value of university education and inadequately prepares students for professional challenges.

Diminished Educational Innovation and Curriculum Development

Politicized course allocation severely constrains educational innovation and curriculum development, creating stagnation that prevents universities from adapting to evolving knowledge landscapes and student needs. When courses become political assets claimed through seniority or patronage, as documented by Oyedeji (2018), they effectively transform into personal property that remains under the same instruction for years or decades with minimal change. This ownership mentality creates powerful resistance to curriculum reform, as established faculty perceive updates as threats to their status and teaching responsibilities.

The innovation deficit manifests through outdated syllabi that fail to incorporate new research findings, continued use of traditional teaching methods despite evidence supporting more effective approaches, and reluctance to integrate emerging topics that cross established disciplinary boundaries. Department politics often prevent the introduction of interdisciplinary courses that would better serve student needs but would disrupt existing power structures. As Olasunkanmi and Musa (2020) observed innovative courses that do not belong within established departmental territories struggle to gain approval when allocation decisions prioritize maintaining existing arrangements over educational advancement.

This stagnation extends beyond individual courses to affect entire program structures. Faculty with political control over core courses resist modifications that might threaten their teaching monopolies, even when those changes would better prepare students for contemporary challenges. The resulting curricula increasingly diverge from evolving disciplinary standards and workforce needs. New faculty often those most familiar with emerging research and pedagogical approaches find themselves unable to contribute meaningfully to curriculum development when political considerations determine which courses they can teach.

The consequences include diminished educational relevance as degree programs fail to evolve with their disciplines, reduced student engagement when courses use outdated approaches, and missed opportunities to prepare graduates for emerging career fields. Ekhosuehi (2016) further added that more objective allocation systems could create space for innovation by disrupting entrenched course ownership patterns, but implementing such systems requires overcoming the very political dynamics that sustain the status quo. The resulting innovation deficit represents a significant opportunity cost that undermines institutional effectiveness and student preparation.

THE RIPPLE EFFECT OF POLITICIZED COURSE ALLOCATION ON STUDENTS, FACULTY, AND INSTITUTIONAL REPUTATION

Consequences for Students

Compromised Learning Outcomes and Educational Experience

Politicized course allocation directly undermines student learning outcomes by creating instructional mismatches that compromise educational quality. When faculty teach courses based on political considerations rather than expertise, as Oyedeji (2018) documents, students receive instruction from professors who may lack depth in the subject matter. This expertise gap manifests in surface-level content coverage, outdated examples, and limited ability to address complex questions. According to Nweke and Ihejirika (2022), this mismatch particularly affects specialized upper-level courses where depth of knowledge significantly impacts learning quality.

The consequences extend beyond content knowledge to affect the entire educational experience. Students detect when instructors lack mastery of their subject, eroding classroom authority and student engagement. Assignments and assessments often become less challenging when faculty design them to avoid exposing their knowledge limitations. Course materials may fail to reflect current disciplinary standards, leaving students with outdated perspectives. Adebayo and Ogundipe (2023) noted that faculty teaching outside their expertise areas cannot effectively incorporate research insights into their teaching, weakening the research-teaching nexus that characterizes quality higher education. The resulting educational experience falls short of students' expectations and needs, leading to disengagement, reduced motivation, and diminished learning outcomes that can have lasting effects on their academic and professional development. Students graduate with knowledge gaps they may not even recognize until they encounter workplace challenges that expose their inadequate preparation, creating lasting consequences that extend well beyond the immediate course experience.

Inequitable Educational Access and Opportunity

Politicized course allocation creates profound inequities in educational opportunities that disadvantage certain student populations. When powerful departments or faculty secure preferential resources through political maneuvering, as Olasunkanmi and Musa (2020) demonstrate, students experience dramatically different educational environments depending on their course selections and program affiliations. These disparities manifest in uneven access to quality instruction, learning resources, and educational support services.

Students in politically favored courses benefit from well-resourced learning environments, appropriate class sizes, and instructors with manageable workloads. Meanwhile, those in less politically powerful departments or required foundational courses often encounter overcrowded conditions, limited access to learning materials, and overworked faculty struggling to provide adequate attention. These resource inequities create what Adebayo and Ogundipe (2023) describe as a "tiered educational experience" within the same institution, where educational quality becomes contingent on course selection rather than universally assured.

The impact falls disproportionately on students from disadvantaged backgrounds that may lack the social and cultural capital to navigate these institutional politics. They frequently find themselves unable to access high-quality elective courses that fill quickly with students who have insider knowledge about which offerings provide the best educational experiences. The resulting opportunity gap compounds existing educational inequalities and undermines the university's role in promoting social mobility. Students graduate with significantly different skill sets and knowledge bases despite receiving degrees from the same institution, creating lasting disparities in their career prospects and professional development opportunities that perpetuate broader social inequalities.

Consequences for Faculty

Professional Stagnation and Diminished Research Productivity

Politicized course allocation forces many faculty members into teaching assignments that contribute to professional stagnation and undermine research productivity. As Nweke and Ihejirika (2022) observe, faculty assigned courses outside their expertise spend disproportionate time preparing basic materials rather than developing scholarly depth. This preparation burden consumes hours that would otherwise support research activities, creating a direct trade-off between teaching preparation and scholarly productivity. The problem intensifies for junior faculty and those lacking political connections, who Oyedeji (2018) noted often receive the heaviest and least desirable teaching loads.

The consequences extend beyond immediate time constraints to affect long-term scholarly development. Faculty teaching outside their research areas cannot develop the symbiotic relationship between teaching and research that characterizes vibrant academic careers. Their teaching does not benefit from their research insights, and their classroom experiences do not generate new research questions. According to Adebayo and Ogundipe (2023), the resulting professional fragmentation prevents faculty from establishing coherent scholarly identities, undermining their ability to build recognizable expertise in specific areas. Publication rates decline, research innovation suffers, and professional development stagnates.

This stagnation creates cascading career impacts. Faculty with diminished research output struggle to secure promotions, obtains external funding, or attracts graduate students, regardless of their teaching effectiveness. Their reduced scholarly visibility limits professional networking opportunities and invitations to contribute to their fields. Over time, their expertise becomes increasingly outdated as they lack time to engage with current literature. The resulting professional marginalization affects faculty morale and institutional commitment, creating a disengaged academic workforce that struggles to maintain currency in either teaching or research domains despite their capabilities and initial career promise.

Work Dissatisfaction and Organizational Injustice

Politicized course allocation generates profound work dissatisfaction among faculty by creating conditions of perceived organizational injustice that undermine professional motivation and institutional commitment. When course assignments reflect political considerations rather than merit or expertise, as Oyedeji (2018) documents, faculty experience this as procedural injustice that violates basic principles of fairness and transparency. This perception intensifies when they observe colleagues receiving preferential assignments based on relationships rather than qualifications.

The resulting dissatisfaction manifests in multiple dimensions. According to Olasunkanmi and Musa (2020), faculty experiencing unfair allocations report higher levels of emotional exhaustion, reduced organizational identification, and decreased willingness to engage in discretionary service activities that support the broader institution. The sense of injustice creates divisive workplace dynamics where faculty focus on political maneuvering rather than collaboration, leading to departmental factionalism and deteriorating collegial relationships. Adebayo and Ogundipe (2023) noted that these conditions particularly affect women and minority faculty, who often lack access to the informal networks that influence allocation decisions.

The workplace consequences extend beyond individual dissatisfaction to affect institutional functioning. Faculty perceiving organizational injustice demonstrates reduced teaching commitment, minimal curriculum development efforts, and disengagement from departmental initiatives. Rather than investing in pedagogical improvement, they direct energy toward managing political relationships or seeking positions elsewhere. Turnover intentions increase, especially among high-performing faculty with the strongest alternative employment options. Those who remain often adopt a minimum-compliance approach to their responsibilities, creating a culture of disengagement that undermines educational quality and institutional advancement. The collective impact of these individual responses creates departments characterized by low morale, minimal innovation, and dysfunction that directly compromises educational mission fulfillment.

Consequences for University Reputation

Diminished Academic Standing and Competitive Position

Politicized course allocation significantly damages the university's reputation by undermining the academic standing and competitive position of the institution in higher education landscapes. As teaching quality suffers from misaligned expertise and resource inequities, the standards and

rigor of educational programs gradually decline. According to Nweke and Ihejirika (2022), these internal compromises eventually become visible externally through graduates who underperform in professional settings or graduate programs at other institutions, creating negative perceptions of institutional quality.

The reputational damage manifests across multiple dimensions. Employer feedback increasingly notes skill gaps in graduates from affected programs. Peer institutions become reluctant to establish exchange programs or accept transfer credits. Accreditation reviews identify concerns about faculty qualifications relative to teaching assignments and inconsistent educational outcomes across programs. Olasunkanmi and Musa (2020) observed that these reputational issues particularly affect public universities where political influences on course allocation tend to be strongest, creating competitive disadvantages relative to private institutions with more merit-based assignment practices.

These reputational challenges create cascading effects on institutional viability. Applications from high-achieving students decline as word spreads about educational quality concerns. Research partnerships become harder to establish as peer institutions question academic standards. Faculty recruitment suffers when prospective candidates learn about internal politics governing teaching assignments. The university's ability to secure external funding diminishes as donors and grantors question institutional effectiveness. Collectively, these impacts weaken the university's competitive position in increasingly challenging higher education markets, threatening long-term sustainability through declining enrollment, reduced funding opportunities, and inability to attract high-quality faculty necessary for maintaining academic standards and rebuilding a damaged reputation.

Erosion of Institutional Values and Public Trust

Politicized course allocation erodes public trust in universities by creating visible contradictions between stated institutional values and operational realities. When universities publicly espouse meritocratic principles while internally distributing teaching responsibilities based on politics and patronage, they create credibility gaps that undermine their moral authority as educational institutions. This dissonance, as Oyedeji (2018) noted, becomes apparent to students who directly experience the consequences of politically motivated decisions that prioritize faculty interests over educational quality.

The resulting trust erosion extends beyond current students to affect broader public perception. Parents question whether tuition investments will yield quality education for their children. Legislators and oversight bodies grow skeptical about institutional management, potentially leading to increased external regulation and reduced autonomy. Community partners become hesitant to engage with universities perceived as putting internal politics above educational mission. According to Adebayo and Ogundipe (2023), these credibility issues particularly damage public universities that depend on taxpayer support and public goodwill for their continued operation.

The consequences for institutional integrity are profound. Universities lose their standing as bastions of meritocracy and fairness, compromising their ability to serve as moral exemplars within their communities. Their advocacy for evidence-based decision-making in society rings hollow when their internal processes prioritize political considerations over demonstrated effectiveness. Ekhosuehi (2016) further pointed out that the technical feasibility of more objective approaches makes the continued reliance on politically driven systems appear as a

choice rather than a necessity. This perceived hypocrisy undermines the university's position as a trusted social institution, limiting its influence in public discourse and policy formation, and compromising its ability to fulfill broader societal leadership responsibilities beyond immediate educational functions.

CONCLUSION

The pervasive influence of politics in university course allocation represents a significant challenge to the core educational mission of higher education institutions. As the evidence from Nigerian universities demonstrates, politically motivated allocation practices create systemic distortions that compromise educational quality, undermine faculty effectiveness, and ultimately diminish student learning outcomes. What begins as internal maneuvering for desirable teaching assignments cascades into far-reaching consequences that affect every aspect of university functioning, from classroom experiences to institutional reputation. The paper reveals a troubling disconnect between educational ideals and operational realities, where course assignments reflect power dynamics, patronage relationships, and hierarchical privileges rather than pedagogical fit and student needs, universities fail to optimize their most valuable resource—faculty expertise. The resulting misalignments create inequitable learning experiences, stifle academic innovation, and erode professional satisfaction among teaching staff. These internal compromises eventually manifest as external reputational damage that threatens institutional viability in competitive educational landscapes.

Suggestions for Mitigating Political Influence in Course Allocation and Ensuring Quality Service Delivery

Addressing the challenges of politicizing course allocation and ensuring quality service delivery:

- Universities must adopt a transparent, merit-based allocation framework, replacing subjective decision-making. This includes clear workload policies with quantifiable metrics, ensuring equitable distribution regardless of faculty status or connections, and promoting fairness and accountability in academic resource allocation.
- Departments should establish allocation committees with diverse representation across rank, gender, and specialization to review teaching assignments for alignment with expertise and equitable workload distribution. This shared responsibility approach reduces the concentration of allocation power with department heads and creates accountability mechanisms that limit politically motivated decisions.
- Regular academic audits should be done to evaluate the alignment between faculty expertise and teaching assignments across departments. Independent reviewers can assess whether courses are taught by appropriately qualified instructors and identify patterns of misallocation that may indicate political influence. These systematic reviews provide data-driven evidence for addressing problematic allocation practices and create institutional accountability for maintaining appropriate teaching-expertise alignment.
- Student feedback systems must be integrated into course allocation decisions through structured evaluation mechanisms. Beyond traditional teaching evaluations, universities should collect data on how effectively courses prepare students for subsequent coursework and professional challenges. This student-centered approach ensures that

educational outcomes, rather than political considerations, drive allocation decisions and provides a counterbalance to faculty-centered political dynamics.

ABSTRACT

This study conceptually explored the relationship between in-service training and the academic performance of environmental education (EE) students in South-South Nigeria. In-service training plays an important role in enhancing the teaching quality of faculty, which, in turn, influences the academic success of their students. This qualitative exploration aims to examine the availability, design, and effectiveness of in-service training programs for EE faculty in the region. Through the review of relevant literature and analyzing educational policies and reports, this study sought to identify how these programs impact teaching methodologies, subject knowledge, and student outcomes. The research highlighted the challenges faced by faculty, such as insufficient resources, inadequate training programs, and socio-economic factors that affect their ability to deliver quality education. Furthermore, it examined how in-service training programs can mitigate these challenges and improve academic performance. In conclusion, there is need for stronger policy on availability, and effectiveness of in-service training programs to support faculty professional development in South-South Nigeria, contributing to the overall educational advancement of EE students. It is recommended the Nigerian University Commission (NUC) that they mandate standardized and periodic in-service training programs across universities in South-South Nigeria to ensure consistency in teaching quality and improved academic outcomes in EE.

Keywords: In-service training, academic performance, EE, South-South Nigeria, teacher professional development, and educational challenges.

INTRODUCTION

In-service training is widely acknowledged as a crucial aspect of educational improvement, particularly in its capacity to enhance the skills and knowledge of faculty, which ultimately reflects in students' academic outcomes. The process of continuous professional development for faculty, known as in-service training, is an essential mechanism in higher education, especially for disciplines like EE. In the context of South-South Nigeria, where educational challenges and regional disparities affect the quality of instruction, in-service training is even more significant. It serves not only to update faculty subject knowledge but also to improve their pedagogical approaches, ensuring that they can effectively teach and inspire their students. A well-trained teacher is more likely to employ diverse, student-centered teaching strategies, which leads to better student engagement and higher academic achievement (Olawole, 2017).

Environmental education (EE) is a field focused on equipping students with the knowledge and skills to address global environmental challenges, requires faculty who are not only subject experts but also capable of fostering critical thinking and environmental consciousness. Bosnjak et al. (2020) added that the need for in-service training in this field is particularly pressing, as the complexity of environmental issues evolves and necessitates ongoing updates in teaching methodologies and content. Faculty who participate in professional development programs are better positioned to provide up-to-date, relevant content that engages students and prepares them for real-world challenges (World Bank, 2020). This makes in-service training a vital tool for improving the quality of EE and, by extension, the academic performance of students in this discipline.

In South-South Nigeria, the importance of in-service training becomes even more pronounced due to the region's unique educational and environmental context. South-South Nigeria comprises states such as Rivers, Delta, Bayelsa, Edo, Cross River, and Akwa Ibom, which are home to a rich cultural and environmental diversity but also face distinct educational and infrastructural challenges. The region is economically dependent on natural resources, particularly oil, which has led to severe environmental degradation, including oil spills, deforestation, and flooding. Conversely, these environmental issues highlight the importance of EE programs that can raise awareness and offer solutions (Akpobome & Worgu, 2019). However, the delivery of such education depends largely on the competency of faculty, who must be equipped with up-to-date knowledge and effective teaching methods. This highlights the crucial role of in-service training in ensuring that faculty in this region can meet the evolving demands of the subject and effectively engage students in learning about environmental issues.

Reports from Nigerian educational bodies such as the National Teachers Institute (2016) emphasize the need for continuous teacher development to improve instructional quality. The Institute stresses that in-service training programs play a central role in enhancing the pedagogical skills of faculty, helping them stay abreast of changes in curriculum and teaching strategies. Similarly, the Nigerian Ministry of Education (2021) has reiterated the importance of teacher professional development in improving overall educational outcomes. Without such training, many faculty may struggle to provide the high-quality instruction required to effectively teach complex subjects like EE, thus limiting students' academic performance. This is particularly relevant in South-South Nigeria, where faculty are often faced with the dual challenge of teaching in resource-constrained environments while also addressing pressing local environmental issues.

Moreover, international organizations such as UNESCO (2019) and the World Bank (2020) have consistently advocated for investing in teacher professional development as a key strategy for improving educational outcomes in developing countries. UNESCO has noted that countries with robust teacher training programs tend to have better student performance, especially in fields that require both academic rigor and practical application, such as EE. The World Bank (2020) further stressed that faculty who engage in high-quality in-service training programs are better equipped to enhance student learning outcomes, making these programs essential for improving educational standards in regions like South-South Nigeria.

This study aims to investigate the relationship between in-service training and the academic performance of EE students in South-South Nigeria. Given the region's specific educational challenges and environmental concerns, the role of in-service training becomes even more critical. Through the examination of the effectiveness of the existing in-service training programs and their impact on faculty' performance and student' outcomes provides valuable insights into how professional development can be optimized to improve educational results in this important field of study. This research will also contribute to the broader discourse on teacher development, particularly in resource-challenged regions, and offer recommendations for policy and practice.

THEORETICAL FOUNDATIONS

Theory of Planned Behavior

The Theory of Planned Behavior, originally developed by Ajzen in 1991, posits that human behavior is fundamentally guided by behavioral intentions, which are shaped by three major constructs: attitude toward the behavior, subjective norms, and perceived behavioral control. This theory is instrumental in explaining the willingness of faculty to engage in professional development such as in-service training. The belief that in-service training will improve classroom instruction, when combined with institutional encouragement and personal confidence in one's ability to adopt new strategies, increases the likelihood of behavioral commitment to professional growth. Bosnjak et al. (2020) elaborated on this by stating that an individual's likelihood to enact a particular educational behavior is strongly influenced by both internal motivations and external social pressures.

In the specific case of EE faculty in South-South Nigeria, this theory is critical in explaining how faculty attitudes and perceptions influence their engagement with in-service training opportunities. The region is characterized by unique educational challenges, including limited resources, environmental degradation, and inconsistencies in policy implementation. Faculty operating within such a context may perceive in-service training as an unnecessary burden unless they believe it will produce tangible benefits for themselves and their students. Hence, their attitude toward training, coupled with social expectations from colleagues, administrators, and government bodies, determines their willingness to participate actively in such programs. This behavioral intention, when positive, can lead to improved teaching practices and ultimately better academic outcomes for students.

Moreover, the construct of perceived behavioral control in Ajzen's model is particularly relevant in contexts with systemic infrastructural and professional limitations, such as many public schools across the Niger Delta states. If faculty feel they lack the time, resources, or institutional support to implement knowledge gained from training programs, they may

experience low self-efficacy and therefore be less inclined to apply the new strategies. In-service training programs that acknowledge these barriers and provide enabling environments are more likely to yield effective changes in classroom practice. Consequently, when faculty believe they have the requisite autonomy, resources, and administrative support to apply what they learn, they are more motivated to teach effectively, which in turn enhances students' performance.

The theory's relevance to this study is grounded in its power to dissect the psychological mechanisms that drive or inhibit teacher engagement with professional development. For EE to be taught effectively in the complex and environmentally sensitive terrain of South-South Nigeria, faculty must first be positively disposed to continual professional development. Understanding the behavioral predictors that influence faculty decisions to engage with in-service training, policymakers, school leaders, and curriculum designers, EE can tailor professional development initiatives that align with teacher beliefs, promote professional confidence, and nurture a culture of continuous learning that is aimed at improving student academic achievement.

Bloom's Taxonomy of Educational Objectives

Bloom's Taxonomy, first developed by Benjamin Bloom in 1956, remains a foundational pedagogical framework that classifies educational goals into six hierarchical domains: knowledge, comprehension, application, analysis, synthesis, and evaluation. Each level builds upon the previous one and encourages students to not only recall information but also to apply, analyze, and create knowledge. The taxonomy is a practical tool for faculty in structuring instructional objectives and assessing students' academic performance across cognitive levels. Viere et al. (2021) emphasized the taxonomy's application in EE, where the ability to think critically and solve real-world problems is essential. The relevance of Bloom's framework lies in its capacity to guide faculty in aligning lesson plans, assessments, and activities with broader educational outcomes that transcend rote learning.

In the aspect of in-service training, Bloom's Taxonomy plays a crucial role in equipping faculty with the pedagogical competencies required to facilitate deeper learning among students. When training modules are intentionally aligned with the cognitive demands outlined in the taxonomy, faculty are more likely to plan lessons that promote higher-order thinking. This is particularly crucial in EE, where complex issues like pollution, climate change, and ecological preservation require students to evaluate information critically and synthesize viable solutions. In-service training programs that educate faculty on how to scaffold learning across the taxonomy's stages empower them to foster analytical thinking and problem-solving skills among students, thereby enhancing academic performance.

The hierarchical model of learning is particularly relevant given the region's ecological challenges and its implications for sustainable development. A pedagogical approach that incorporates all levels of Bloom's Taxonomy encourages students to move beyond memorization to a point where they can evaluate local environmental problems and propose actionable interventions. Faculty's trained through in-service programs to implement this pedagogical approach are better positioned to enhance not just the knowledge of their students, but their critical consciousness and capacity for real-world engagement. This approach is integral to fostering academic excellence and environmental stewardship among learners in the region.

The significance of Bloom's Taxonomy to this study is rooted in its direct link to instructional quality and cognitive achievement. Anchoring teaching practices on the taxonomy's

framework, faculty are able to measure and facilitate academic performance systematically. In-service training programs, when infused with the principles of Bloom's Taxonomy, offer practical tools that enhance lesson design, classroom assessment, and student engagement. These outcomes align directly with the goals of EE, which seeks to develop learners capable of responding thoughtfully to pressing ecological challenges. Thus, the taxonomy not only supports teaching effectiveness but also amplifies the educational outcomes of in-service training initiatives.

Relevance of the Theories to Environmental Education

The integration of the Theory of Planned Behavior and Bloom's Taxonomy within this conceptual exploration provides a balanced theoretical foundation for understanding how in-service training impacts student academic performance. While Ajzen's theory provides insights into the behavioral and psychological factors that influence faculty participation in professional development, Bloom's Taxonomy offers a pedagogical lens through which teaching quality and student learning progression can be evaluated. Together, these theories present a comprehensive understanding of the mechanisms through which professional development influences educational outcomes, particularly in disciplines requiring critical engagement like EE.

In the South-South region of Nigeria, where both environmental challenges and educational inequities persist, the application of these theories are not only academically relevant but contextually urgent. Faculty in the region must be motivated, well-equipped, and strategically supported to overcome the multifaceted challenges they face in the classroom. In-service training, when designed with these theoretical considerations in mind, they become transformative tools capable of enhancing faculty effectiveness and student achievement. These theories, thus, serves as guiding frameworks for the development and implementation of training programs tailored to the specific needs of EE in ecologically sensitive region.

In-service Training

In-service training refers to the professional development programs that lecturers undergo during their teaching careers to enhance their knowledge, skills, and teaching effectiveness. This type of training is crucial in ensuring that faculty's remain updated with the latest educational practices, methodologies, and policies, which ultimately improves student learning outcomes. In the context of Nigerian universities, in-service training programs are vital as they offer faculty opportunities to refine their pedagogical techniques, adopt new instructional strategies, and engage with evolving curricula. In-service training programs provide specific knowledge about environmental issues, sustainability practices, and interdisciplinary teaching methods that align with national and global educational goals (Akinyemi, 2019). In-service training programs not only equip faculty with the tools needed to teach effectively but also help them stay informed about technological advances, research innovations, and policy changes in EE (Okeke, 2020). Participating in such programs makes faculty better positioned to promote more engaging and effective learning environment for their students, ultimately enhancing the academic experience.

In-service training is structured around various forms, including workshops, seminars, online courses, and peer learning. These initiatives are tailored to meet the diverse needs of faculty in different disciplines, including EE. According to Oyewole (2018), in-service training programs for faculty in Nigerian higher institutions emphasize the importance of adapting to

local context-based learning, addressing region-specific challenges such as inadequate resources and infrastructural limitations. For the EE faculty, their training often focuses on strengthening their capacity to address local environmental issues, which are crucial to the sustainability of Nigeria's diverse ecosystems. Additionally, in-service training creates a collaborative space for faculty to share best practices, enabling them to learn from one another's experiences and improve their teaching approaches. This process is essential for fostering professional growth, as it not only builds individual teaching capacity but also strengthens the broader educational community. As noted by the Nigerian National Policy on Education (Federal Republic of Nigeria, 2014), these professional development initiatives are necessary for continuous improvement in teaching and learning, ensuring that the educational system remains responsive to societal needs.

Despite the importance of in-service training, challenges remain in its implementation in Nigerian universities. Barriers such as inadequate funding, lack of time for faculty to attend training, and the absence of institutional support often limit the effectiveness of these programs (Okoh & Oloruntoba, 2017). This is particularly true in the South-South region of Nigeria, where environmental issues such as deforestation, pollution, and flooding are pressing concerns. In-service training for faculty in this region must therefore be designed to address these unique environmental challenges while providing faculty with the necessary tools to teach environmental concepts effectively. According to Asiedu-Akrofi (2016), regional nuances in teacher training must be acknowledged, as what works in one part of the country may not be applicable in another. Thus, for faculty in the South-South region, professional development must be context-specific, integrating local environmental realities into the curriculum.

Academic Performance

Academic performance refers to the level of achievement a student demonstrates in their academic work, often measured by grades, test scores, or other evaluative assessments that reflect the student's understanding and mastery of a subject. In the context of EE, academic performance is assessed through students' ability to apply theoretical knowledge to practical, real-world environmental problems, as well as their ability to engage critically with environmental issues (Ige, 2019). In Nigerian universities, academic performance is often gauged through written exams, research projects, and practical assignments, each designed to measure the student's comprehension and application of environmental concepts (Nwachukwu & Nwankwo, 2021). EE students are expected to demonstrate a deep understanding of ecological principles, sustainable practices, and environmental policies, as well as an ability to communicate and advocate for environmental preservation. Academic performance in this field is not only measured in terms of grades but also through students' engagement with community projects, internships, and practical fieldwork, which are essential for reinforcing theoretical knowledge with hands-on experience.

The measurement of academic performance in EE students requires an integrated approach that includes both cognitive and affective dimensions of learning. Cognitive outcomes pertain to the knowledge and skills students acquire, while affective outcomes relate to their attitudes and values toward environmental sustainability. According to Akpan and Ekerette (2018), and Ololube and Wome (2025), a key component of academic performance involves the ability to engage with environmental challenges at local, national, and global levels. This reflects the multidimensional nature of EE, which seeks to instill a deep understanding of both natural

and human-influenced environmental systems. It is therefore important to evaluate students' critical thinking skills, their ability to synthesize information from multiple disciplines, and their capacity to propose sustainable solutions. As noted by the Nigerian Education Research and Development Council (NERDC, 2019), academic performance in EE must not only reflect the acquisition of knowledge but also the application of that knowledge in solving real-world environmental issues.

In the South-South region of Nigeria, academic performance in EE is heavily influenced by the students' exposure to local environmental challenges such as oil spills, coastal erosion, and urban pollution. These issues provide students with unique learning opportunities that directly relate to their studies. However, the academic performance of EE students in this region can be impacted by factors such as inadequate resources, poor infrastructure, and limited access to educational materials (Ogunlade & Okorie, 2020). To improve academic performance, it is crucial to address these barriers by enhancing both the educational environment and the pedagogical approaches employed in teaching EE. Offering specialized training to EE faculty through in-service programs provides a greater likelihood that students will experience improved academic performance. Therefore, academic performance in this field cannot be fully understood without considering the contextual factors that shape the educational experience of students in the South-South region of Nigeria.

Environmental Education (EE) Students

EE students are individuals pursuing academic programs focused on the study of environmental issues, sustainable practices, and the relationships between humans and the natural environment. These students typically engage in multidisciplinary studies that encompass the fields of ecology, environmental science, policy studies, and sustainable development (Adedayo & Okoro, 2018). In Nigerian universities, students enrolled in EE programs are expected to acquire not only theoretical knowledge but also practical skills to address pressing environmental challenges. The curriculum is designed to foster an understanding of the natural world, equip students with problem-solving abilities, and prepare them for careers in environmental management, policy, education, and advocacy. The goals of EE programs are deeply rooted in the need for sustainable development and environmental stewardship, which are becoming increasingly important in the face of global environmental challenges.

The role of EE students extends beyond the classroom, as they are often involved in community-based projects, environmental awareness campaigns, and advocacy initiatives. In Nigeria, these students are frequently tasked with implementing educational programs that promote sustainability and environmental consciousness in local communities. Their academic work often intersects with their personal commitment to addressing environmental issues in their own communities (Nwachukwu & Uzochukwu, 2021). For example, in the South-South region, where environmental degradation due to oil exploration and other industrial activities is prevalent, students are expected to develop strategies to mitigate environmental harm and promote sustainable practices in affected communities. This hands-on involvement in real-world environmental problems enriches their academic experience and allows them to contribute meaningfully to their communities.

In-service training plays a significant role in shaping the effectiveness of EE students, as it provides faculty with the necessary skills to support students' academic growth. Faculty who undergo in-service training are better equipped to guide their students in applying classroom

knowledge to practical environmental problems. For students in the South-South region, exposure to relevant, context-specific environmental challenges through their academic program is crucial for building their expertise. Moreover, professional development for faculty helps bridge the gap between theoretical knowledge and practical skills, ensuring that students are adequately prepared for their future careers in environmental management and policy. Therefore, in-service training is not only beneficial to faculty but also instrumental in enhancing the overall academic experience of EE students in Nigeria.

Educational Environment in South-South Nigeria

The educational environment in South-South Nigeria presents a unique blend of opportunities and challenges that significantly impact the academic performance of university students, particularly those studying EE. The region, comprising states such as Rivers, Delta, Bayelsa, Edo, Cross River, and Akwa Ibom, is resource-rich and hosts several public and private universities. Despite its potential, the educational system in this region is often undermined by persistent infrastructural inadequacies, insufficient funding, and socio-economic disparities that collectively influence the quality of education and the effectiveness of in-service training programs for academic staff.

Educational Infrastructure and Resources in South-South Nigeria

Universities in South-South Nigeria are strategically important institutions due to the region's ecological significance and industrial activities, particularly oil and gas exploration. Universities like the University of Port Harcourt, Niger Delta University, Delta State University, and the University of Benin, offer EE programs tailored to address the region's environmental challenges. However, these institutions face numerous infrastructural limitations that hamper optimal academic performance. According to the Delta State Ministry of Education (2021), the inadequate provision of modern lecture halls, outdated laboratory equipment, limited access to ICT tools, and poor maintenance of physical infrastructure are common across most tertiary institutions in the region.

Moreover, the Federal Ministry of Education (2022) noted that while efforts have been made to improve the educational infrastructure in the South-South, the pace of development remains slow due to bureaucratic delays and inconsistent funding. For EE students, whose academic programs are heavily reliant on practical fieldwork, laboratory experiments, and access to scientific resources, these infrastructural shortcomings pose significant challenges. Students often struggle to complete coursework or engage in meaningful environmental research due to lack of tools and materials. Ede and Okonkwo (2020) emphasized that inadequate infrastructure directly reduces the effectiveness of EE programs, thereby limiting the students' academic growth and professional competence.

Funding, Infrastructure, and Socio-Economic Barriers

One of the most pressing issues affecting the educational environment in South-South Nigeria is the chronic underfunding of tertiary institutions. Although the region contributes significantly to the national economy through its oil wealth, this revenue has not consistently translated into better funding for education. The Rivers State Ministry of Education (2022) reported that public

universities in the region often operate on limited budgets, which constrains the implementation of quality academic programs and hinders investment in faculty development. EE departments are particularly affected, as they typically require higher operational costs for field studies, ecological surveys, and specialized teaching materials.

Furthermore, many students in the South-South come from socio-economically disadvantaged backgrounds, which exacerbate the challenges they face in accessing quality education. High tuition fees, transportation costs, and lack of accommodation facilities disproportionately affect students from rural areas. Akpobome and Worgu (2019) conducted a study across three universities in the South-South and found that economic hardship is a significant predictor of poor academic performance, especially in fields requiring extensive out-of-class learning like EE.

Additionally, security concerns, especially in parts of Rivers and Delta States, disrupt academic schedules and limit outdoor academic activities such as field trips and community-based environmental assessments. These regional challenges collectively influence not only the academic performance of EE students but also their exposure to practical learning experiences that are critical to the discipline.

Impact on In-Service Training Implementation and Effectiveness

The effectiveness of in-service training programs for academic staff in South-South Nigeria is deeply influenced by these regional factors. First, infrastructural deficits and funding constraints often mean that universities lack the financial and logistical capacity to organize regular, high-quality training programs. In many cases, lecturers depend on externally funded workshops, which may not be tailored to the specific pedagogical and environmental needs of the region. As highlighted in the Rivers State Higher Education Development Report (2022), the absence of sustained institutional support for teacher development has resulted in a disconnect between theoretical training and practical classroom application. Secondly, the socio-economic and infrastructural challenges faced by students also reduce the effectiveness of teacher training. For instance, lecturers who are trained to use interactive or technology-enhanced teaching methods may find it difficult to implement such techniques if students lack access to digital devices or internet connectivity.

According to Ogbonda and Enyindah (2021), the success of in-service training depends not only on the quality of the training but also on the broader educational context within which teaching occurs. Without corresponding improvements in the learning environment, even well-designed training programs may fail to achieve meaningful improvements in student outcomes. The educational environment In South-South Nigeria, while rich in natural and academic potential, is hampered by a combination of infrastructural deficits, funding issues, and socio-economic challenges. The geographical dispersion of universities across rivers and creeks in the Niger Delta region makes it logistically difficult for faculty to attend centralized training programs, especially when such training is held outside their immediate institutions.

This challenge is compounded by transportation difficulties and security concerns in some parts of the region. As a result, faculty's often miss opportunities for continuous professional development, which is essential for updating their teaching strategies in EE (Essien & Okon, 2020). These factors significantly affect the academic performance of EE students and limit the effectiveness of in-service training programs for university lecturers. Addressing these regional disparities through targeted investment in infrastructure, sustained funding, and

localized training initiatives is crucial for improving educational outcomes and building a resilient academic ecosystem in the South-South region of Nigeria.

In-Service Training and Academic Performance

In-service training plays a pivotal role in improving the academic performance of students, particularly in disciplines such as EE. Providing faculty with continuous professional development training programs equip them with new methodologies, enhanced subject knowledge, and updated teaching strategies that ultimately influence student outcomes. Studies have shown that when faculties receive targeted, ongoing training, they are better able to deliver content that is both engaging and educational, fostering an improved learning environment for students. According to Okoh and Oloruntoba (2017), effective in-service training enhances faculty instructional practices, which directly impacts students' understanding of complex topics, such as those encountered in EE. In particular, the ability of faculty to incorporate real-world environmental challenges into the curriculum helps students grasp theoretical concepts more effectively and apply their learning to practical scenarios. As such, in-service training serves as a key factor in improving the academic performance of EE students by enhancing the quality of instruction they receive.

In-service training programs often focus on a range of key areas that influence both teaching effectiveness and student performance. For instance, these programs aim to update faculty subject-specific knowledge, which is crucial in a rapidly changing field like EE. With new environmental policies, technologies, and research emerging regularly, faculty need up-to-date information to provide students with the most relevant and accurate content. Moreover, in-service training helps faculty refine their teaching methodologies, making them more student-centered and interactive. For example, in-service programs that emphasize project-based learning and field-based activities encourage faculty to adopt more hands-on, experiential teaching methods, which have been shown to improve student engagement and retention of knowledge (Asiedu-Akrofi, 2016). Furthermore, as noted by Adeyemo (2019), in-service training empowers faculty to better assess students' learning needs, tailor their lessons accordingly, and provide constructive feedback, all of which contribute to improved academic performance. Thus, the more effective and knowledgeable a teacher is, the better the students' academic outcomes, especially in a complex field such as EE, where practical application is essential.

The effectiveness of in-service training programs in Nigerian universities, specifically those focused on EE, can be seen in several successful models that have been implemented across the country. One notable example is the partnership between Nigerian universities and international organizations, such as UNESCO and the World Bank, to improve EE and sustainability through teacher training initiatives (Nwachukwu & Uzochukwu, 2021). These programs are designed to provide faculty with the necessary skills to teach environmental concepts more effectively, with a strong emphasis on practical application and real-world problem-solving. For instance, the 'Teachers for Sustainable Development' program, implemented in several Nigerian universities, has trained thousands of faculty on how to integrate sustainability principles into their teaching practices. According to research by Oyewole (2018), such programs have led to notable improvements in the academic performance of EE students, particularly in their ability to apply theoretical knowledge to environmental issues in their communities. Additionally, the success of in-service training models such as this

has been supported by empirical studies that indicate a positive correlation between faculty professional development and improved student academic outcomes (Akinyemi, 2019).

Another successful model is the use of peer-led professional development workshops, where faculty who have undergone in-service training share their knowledge and experiences with their colleagues. This collaborative approach has been found to increase the overall effectiveness of the teaching community and promote a culture of continuous learning within schools (Adedayo & Okoro, 2018). In a study by Okeke (2020), it was found that faculty who participated in peer learning networks demonstrated improved teaching methodologies, which were directly reflected in the academic performance of their students. These peer-led initiatives, combined with formal in-service training, create a more comprehensive professional development structure that benefits both faculty and students. Leveraging the expertise of seasoned faculty's and ensuring that the latest educational techniques and environmental issues are addressed, these training models have contributed to improved student outcomes in EE programs across Nigerian universities.

However, despite the success of these models, challenges remain in ensuring the widespread implementation and sustainability of in-service training programs. The lack of consistent funding, inadequate infrastructure, and limited time for faculty to attend these programs continue to pose barriers to effective teacher development (Okoh & Oloruntoba, 2017). Furthermore, the contextual relevance of in-service training must be considered, particularly in regions with distinct environmental concerns, such as the South-South region of Nigeria, where issues like oil pollution and flooding are prevalent. As noted by Nwachukwu and Nwankwo (2021), in-service training programs need to be adapted to address these specific challenges to have the most significant impact on both teaching and learning. Therefore, for in-service training to truly enhance academic performance, it must be both contextually relevant and adequately supported by institutional policies and funding mechanisms.

In-service training is a crucial factor in improving the academic performance of EE students. The enhancement of faculty subject knowledge, teaching methodologies, and practical skills through programs enable faculty to provide a more engaging and effective learning experience. Successful models of in-service training in Nigerian universities demonstrate the positive impact of professional development on both teaching quality and student outcomes. However, for these programs to be truly effective, they must be consistently supported and adapted to meet the unique needs of students and faculty in different regions, particularly in the South-South region of Nigeria.

FACTORS INFLUENCING THE SUCCESS OF IN-SERVICE TRAINING

In-service training programs for faculty are a key strategy for enhancing teaching quality and improving student outcomes, particularly in specialized areas like EE. However, the success or failure of these programs depends on several factors, including curriculum design, delivery methods, duration, and the capacity of both faculty and students to benefit from the training. Understanding these factors is critical to ensuring that in-service training achieves its intended goals of improving academic performance.

Curriculum Design

One of the most critical factors influencing the success of in-service training programs is the relevance of the curriculum design. A well-structured training curriculum should align with the current educational goals and be directly applicable to the needs of both the faculty and the students. In the context of EE, this means integrating up-to-date content that reflects global environmental challenges, such as climate change, biodiversity loss, and sustainability, as well as incorporating the latest pedagogical approaches for effective teaching. According to Ololube (2024) and Ololube and Wome (2025), in-service training programs that focus on content that is both current and regionally relevant are more likely to have a lasting impact on teaching quality and student performance.

When the curriculum is designed in consultation with faculty, policymakers, and other stakeholders, it ensures that the training is not only academically rigorous but also practically applicable to real-world situations. For example, training programs for EE faculty could include modules on climate adaptation strategies for the Niger Delta, or the use of local case studies to teach sustainable development. Such relevant curricula ensure that faculty are well-equipped to provide students with meaningful and practical knowledge, improving their academic engagement and outcomes. A curriculum that is responsive to the regional challenges in the South-South of Nigeria, such as oil pollution or deforestation, would enable faculty to contextualize EE in a manner that resonates with students' lived experiences (Umar & Adebayo, 2020).

Challenges Faced by Faculty and Students

While in-service training programs are designed to improve teaching and learning, both faculty and students may encounter challenges that hinder their effectiveness. For the faculty, one of the major barriers to the benefits of in-service training is the lack of adequate support from university management. Faculty may struggle to attend training sessions due to scheduling conflicts, lack of financial support, or limited time away from teaching duties (Olayemi, 2019). Additionally, the reluctance to adopt new teaching methods or technologies can be a significant barrier, particularly for more experienced faculty who are accustomed to traditional approaches. For students, challenges often arise when faculty struggle to implement newly acquired knowledge effectively. As noted by Fadipe and Olatunji (2020), even well-trained faculty may face difficulties in transferring their learning into classroom practices if there is a lack of institutional support, such as resources, materials, or proper infrastructure. This can create a gap between the training faculty receive and the quality of instruction students ultimately experience, hindering their academic performance.

Effective Training Delivery Methods

The method of delivery for in-service training is another critical determinant of success. Traditional lecture-based methods, while common, often fail to engage participants fully, especially when dealing with complex or practical subjects like EE. Effective in-service training requires interactive, hands-on, and participatory delivery methods that cater to diverse learning styles. A study by Olayemi (2019) suggests that incorporating project-based learning, collaborative workshops, and field-based experiences into in-service programs can significantly

enhance teacher engagement and skills acquisition. These methods allow faculty to actively apply new knowledge and strategies in realistic settings, thus, it improves the quality of instruction once they return to their classrooms.

Moreover, technology plays an increasingly important role in training delivery. The integration of digital tools, such as online courses, webinars, and educational software, allows for greater flexibility and accessibility in teacher professional development programs. This is particularly important in Nigerian universities where faculty might face logistical barriers such as distance or time constraints. In a study by Abiola (2020), it was noted that online and blended learning options for in-service training have shown promise in providing consistent, updated professional development for faculty in remote areas. The combination of a mix of traditional and modern training delivery methods, in-service programs can cater for various learning preferences and ensure better outcomes for both faculty and students.

Duration and Frequency of In-Service Training

The duration and frequency of in-service training programs also play a pivotal role in their success. Training programs that are too brief or too infrequent may fail to achieve long-term improvements in teaching practices. Research has shown that sustained, ongoing training efforts are more effective than one-off workshops (Fadipe & Olatunji, 2020). For example, a study by Williams and Smith (2021) highlighted that faculty who participated in intensive, long-term in-service programs with regular follow-ups demonstrated more significant improvements in classroom practices and student performance compared to those who attended short-term sessions. An optimal training duration should allow for adequate depth of learning while balancing faculty other professional responsibilities. Programs that span several weeks or months, with opportunities for continuous assessment and feedback, are more likely to result in meaningful changes in teaching quality. Furthermore, the training should be spaced out over time, allowing faculty to implement what they have learned in their classrooms and reflect on their progress. Periodic refresher courses or follow-up sessions can help reinforce key concepts and prevent the loss of newly acquired skills (Ogunyemi & Akinpelu, 2020).

To maximize the effectiveness of in-service training, several best practices can be implemented. Firstly, training should be designed with a clear focus on faculty practical needs, aligning content with classroom realities and regional educational priorities. Regular feedback and needs assessments from both faculty and students should guide the evolution of in-service training programs. As highlighted by Umar and Adebayo (2020), fostering a culture of continuous professional development, where faculty are encouraged to view training as an ongoing process, is crucial. Collaborative learning environments, where faculty can share experiences and best practices, can also enhance the impact of in-service training. Hence, training programs should not only focus on improving subject knowledge but also on enhancing pedagogical skills, such as classroom management, assessment techniques, and the use of technology in teaching. Programs that provide follow-up support, such as mentorship or peer coaching, can further strengthen the application of newly acquired skills in the classroom. When these best practices are implemented effectively, in-service training programs can lead to meaningful improvements in teaching quality and, ultimately, student academic performance in EE.

ENVIRONMENTAL EDUCATION AND ACADEMIC PERFORMANCE

Environmental Education (EE) plays an important role in the Nigerian educational system, particularly in the promotion of a sense of responsibility towards environmental sustainability and developing skills essential for addressing local and global environmental challenges. It is integrated into various academic disciplines, but the most significant impact is seen in creating environmentally literate citizens who can contribute to the sustainable development of their communities. in a study conducted by (Adedayo & Okoro, 2018) positioned EE in Nigeria as an essential component of the curriculum, aiming to cultivate awareness and understanding of environmental issues such as pollution, climate change, and resource depletion, which are especially relevant in the context of Nigeria's growing population and industrialization. The importance of EE lies not only in raising awareness but also in equipping students with the skills needed to critically analyze environmental issues, thus preparing them for both academic success and active participation in societal development.

In Nigerian universities, particularly in the South-South region, EE is critical due to the region's unique environmental challenges. The South-South region, which includes states like Rivers, Delta, and Bayelsa, faces significant environmental degradation due to activities such as oil exploration, deforestation, and flooding (Nwachukwu & Nwankwo, 2021). These environmental issues necessitate an educational framework that provides students with the knowledge and skills to address and mitigate these challenges. However, EE students in this region face specific academic challenges. These challenges include limited access to up-to-date educational materials, inadequate infrastructure for practical learning, and a lack of qualified faculty who are trained in modern environmental teaching methods. These factors undermine the ability of students to fully comprehend and apply the concepts learned in the classroom. According to Nwachukwu and Uzochukwu (2021), despite the growing recognition of EE importance, students often struggle to connect theoretical knowledge with real-world environmental issues due to the scarcity of field-based learning opportunities and the lack of practical exposure to environmental concerns. This gap in practical learning further exacerbates the challenges faced by EE students in the South-South region.

The quality of teaching plays a crucial role in improving academic outcomes for EE students, particularly when supported by in-service training programs. In-service training ensures that faculty are well-equipped with the latest teaching methods, subject-specific knowledge, and pedagogical skills. As highlighted by Asiedu-Akrofi (2016), when faculty engage in continuous professional development, they become more proficient at delivering lessons that are both informative and engaging, which has a direct positive effect on student learning. In-service training helps faculty refine their approaches to teaching environmental topics, ensuring that lessons are more interactive and relevant to the challenges faced by students. Furthermore, in-service training allows faculty to incorporate modern teaching aids, such as multimedia presentations, field trips, and interactive discussions, which enhance student understanding and retention of environmental concepts. In Nigerian universities, successful in-service programs have shown that when faculty are well-trained, they can foster a more conducive learning environment, leading to improved academic performance among EE students (Adeyemo, 2019). Moreover, as noted by Okeke (2020), by equipping faculty with the latest knowledge and strategies, in-service training helps them tailor their instruction to better address the specific academic needs of students, thus enhancing their overall academic success.

Research has shown that effective EE, supported by well-structured in-service training, can significantly enhance students' academic performance. A study by Oyewole (2018) found that faculty who underwent in-service training demonstrated improved ability to teach complex environmental topics, which directly impacted the academic performance of their students. In the context of Nigerian universities, particularly in the South-South region, where environmental issues are pressing, the ability of faculty to deliver high-quality, contextually relevant lessons is crucial. As such, the combination of environmental content mastery and pedagogical skill, fostered through in-service training, can help bridge the gap between theoretical knowledge and practical application, ultimately improving academic outcomes for EE students.

Hence, EE plays a vital role in shaping the academic growth of students in Nigeria, especially in the South-South region, where environmental challenges are most pronounced. While there are numerous academic challenges facing EE students in this region, including limited resources and a lack of practical learning opportunities, in-service training for faculty presents a promising solution. Asiedu-Akrofi (2016) posited improving the quality of teaching, in-service training programs can enhance both the effectiveness of EE and the academic performance of students. Therefore, the continued emphasis on professional development for faculty, particularly in the field of EE, is essential for addressing both the academic needs of students and the pressing environmental concerns facing the South-South region of Nigeria.

IN-SERVICE TRAINING CHALLENGES IN ENVIRONMENTAL EDUCATION

Environmental Education (EE) is an essential component of the educational curriculum in Nigerian universities, particularly for fostering sustainable development and raising awareness about pressing environmental issues. However, despite its significance, EE students in Nigerian universities, particularly in the South-South region, face a multitude of challenges that hinder their academic development. These challenges can be broadly categorized into academic, logistical, and socio-economic factors, all of which can be exacerbated by inadequate teacher training and resource limitations. Addressing these challenges through targeted in-service training programs for faculty is crucial to improving the overall academic experience of students and their performance in EE.

Academic Challenges

One of the primary academic challenges faced by EE students in Nigerian universities is the outdated and inadequate curriculum. Despite the growing awareness of environmental issues in the country, many universities, particularly in the South-South region, still rely on outdated textbooks and teaching materials that do not adequately address current environmental concerns (Ogunyemi & Akinpelu, 2020). Additionally, there is a lack of integration between theoretical knowledge and practical application in the curriculum. While students may learn about environmental concepts in the classroom, they often lack opportunities for hands-on learning, such as field trips, community-based projects, or exposure to real-world environmental issues. According to Nwachukwu (2019), this gap between theory and practice is one of the key factors that hinder students' ability to apply their knowledge in meaningful ways and contribute to solving environmental problems in their communities. This challenge is compounded by the fact that many EE faculty are not adequately trained to teach in a way that integrates theoretical and practical knowledge.

In-service training plays fundamentals role in alleviating academic challenges and providing faculty with updated knowledge and modern pedagogical methods is the way to go. In-service training helps to ensure that faculty are equipped to deliver a more relevant and engaging curriculum. For example, in-service programs that focus on field-based learning, community engagement, and the use of modern teaching aids such as multimedia and interactive technologies can enhance students' learning experiences and make EE more applicable to real-world issues. Studies by Akinyemi and Okebukola (2020) show that in-service training programs that focus on practical learning methods and new teaching technologies can significantly improve both the quality of teaching and the academic performance of students in EE.

Logistical Challenges

Logistical challenges also present significant obstacles to the effective delivery of EE in Nigerian universities. In many institutions, there are insufficient resources to support the teaching of EE. This includes inadequate laboratory facilities, lack of field sites for practical learning, and insufficient access to environmental data or case studies that could enrich students' understanding of local and global environmental issues (Akinyemi, 2019). Furthermore, EE often requires interdisciplinary collaboration with departments such as geography, biology, and social sciences, which may not be well-coordinated in some universities. As a result, students may not have the necessary exposure to a broad range of perspectives and research that could enhance their academic development in this field.

The lack of resources and infrastructure can be mitigated through targeted in-service training that focuses on resource management and the effective use of available materials. For instance, in-service training programs that emphasize low-cost and sustainable teaching resources, such as local case studies and community-based learning, can help faculty make the most of the resources available to them. In a study by Nwachukwu and Nwankwo (2021), it was found that when faculty are trained to use alternative teaching methods and make use of available local resources, students are better able to connect with the subject matter and demonstrate improved academic performance. Consequently, training programs guide faculty in effectively utilizing digital tools and online platforms to supplement traditional teaching methods, thus overcoming logistical limitations.

Socio-Economic Challenges

Socio-economic factors also significantly impact the academic performance of EE students in Nigerian universities. Many students come from economically disadvantaged backgrounds and face challenges such as inadequate funding, poor living conditions, and limited access to academic support systems. These issues can lead to high dropout rates and lower academic achievement. In the South-South region, where communities are often affected by environmental degradation caused by activities such as oil exploration, socio-economic challenges are further compounded by environmental crises, leading to displacement, loss of livelihood, and a lack of community support (Nwachukwu & Nwankwo, 2021). As a result, many students may be distracted by socio-economic concerns that affect their ability to focus on their academic work, which ultimately impacts their performance in EE courses.

In-service training programs can help mitigate some of these socio-economic challenges by equipping faculty with the skills to address the diverse needs of students. Training programs

that focus on building inclusive teaching practices and developing strategies for supporting students from disadvantaged backgrounds can create a more supportive learning environment. Furthermore, in-service training can enable faculty to engage in community outreach programs that connect students with local environmental initiatives, helping them understand the real-world relevance of their studies and the importance of environmental sustainability. According to Adeyemo (2019), such community-based learning initiatives not only support the academic development of students but also provide them with opportunities to address pressing local environmental challenges.

EE students in Nigerian universities, especially in the South-South region, face significant academic, logistical, and socio-economic challenges. These challenges can be alleviated through targeted in-service training programs for faculty, which can improve teaching methods, address resource limitations, and support students from disadvantaged backgrounds. Providing faculty with the necessary skills and resources, in-service training can enhance the quality of EE, which will ultimately improve the academic performance of students in this critical field.

Regional In-Service Training Programs in South-South Nigeria

In-service training programs tailored for EE faculty in South-South Nigeria represent a critical component of professional development intended to enhance teaching effectiveness and ultimately improve student academic performance. These training programs are organized by various stakeholders including state ministries of education, federal education agencies, universities, and international development partners. The aim is to bridge pedagogical gaps, refresh subject content knowledge, and introduce innovative instructional strategies in response to the evolving environmental and educational realities of the region. Notably, the programs vary in duration and design, ranging from short-term workshops and seminars to more extended professional certificate courses hosted by regional institutions such as the University of Port Harcourt, Niger Delta University, and Delta State University. The programs often address topics like climate change education, biodiversity conservation, waste management, sustainable development, and integration of ICT in teaching EE (Okereke & Amadi, 2018; Akinsorotan & Enwin, 2021).

The structure of in-service training programs in the region is typically influenced by localized educational demands and environmental contexts. For example, given the ecological sensitivity of the Niger Delta and the frequency of environmental hazards in states like Rivers and Bayelsa, training modules often focus on equipping faculty with the skills to incorporate real-life environmental issues into classroom learning. The participatory approach adopted in many of these programs ensures that faculty actively engage with content through group tasks, fieldwork simulations, and reflective teaching exercises, thereby promoting deeper understanding and immediate applicability in their teaching practices. As observed by Ekanem and Alabo (2020), in-service training programs in South-South Nigeria often incorporate components of action research, encouraging faculty to investigate and address contextual challenges within their schools. Additionally, programs are increasingly designed with input from both faculty and curriculum developers, ensuring relevance to both the national education framework and the unique needs of the region's students.

Despite the recognized value and thoughtful design of these training programs, EE faculty in South-South Nigeria continue to face a range of challenges that hinder full

participation and benefits. One of the foremost challenges is limited access, particularly for faculty in remote or riverine areas who often struggle with transportation difficulties and poor communication infrastructure. According to the Rivers State Ministry of Education (2022), logistical constraints such as inadequate transportation allowances and lack of accommodation discourage many faculty from attending centralized training events. Moreover, many schools are understaffed, making it difficult for faculty to be released for training without disrupting academic schedules, especially during peak academic periods. The situation is worsened by the irregular scheduling of programs and inadequate communication from organizers, which limits early planning and participation by faculty.

Another critical barrier is the irregularity of funding for such professional development initiatives. Although federal and state governments acknowledge the need for regular teacher training, budgetary allocations often fall short, leading to the cancellation or scaling down of proposed programs. This has led to a reliance on donor-funded or NGO-organized training workshops which, although impactful, are typically limited in coverage and may not align fully with national curricular goals. As posited by Onoyume and Ede (2021), this overreliance on externally funded training has resulted in a lack of institutional ownership, poor continuity, and little room for post-training follow-up to assess implementation and impact. Furthermore, even where training is available, the absence of effective monitoring and evaluation mechanisms often means that the outcomes of such training on teacher competency and student performance are not adequately tracked, reducing accountability and potential improvement.

In addition to systemic challenges, the pedagogical relevance of some in-service training content is also a concern. Some programs have been criticized for offering overly theoretical sessions with limited practical application to classroom realities. In many cases, facilitators are drawn from university faculties or consultant pools with limited experience in secondary or tertiary EE classrooms, resulting in a mismatch between training content and faculty day-to-day instructional needs. Eneh and Ugoji (2019) highlighted that without practical and context-specific orientation, in-service training may fail to bring about meaningful change in teaching practices. Faculty often return to their classrooms without the necessary tools, teaching aids, or institutional support to implement what they have learned, leading to frustration and minimal instructional improvement. Nevertheless, some best practices have emerged within the South-South region that suggests the potential for enhancing the relevance and effectiveness of in-service training. Collaborations between universities and teacher training institutions, particularly through Teaching Practice Units and Faculty of Education outreach programs, have yielded structured, peer-assisted training models that are more inclusive and adaptive.

Conversely, Asiedu-Akrofi (2016) reported Delta State University's partnership with local secondary schools to include rotational training sessions focused on EE pedagogy, classroom management, and assessment techniques. These programs emphasize local environmental concerns and empower faculty with methods to contextualize global environmental challenges within their immediate communities. Moreover, the integration of digital platforms into training particularly during and after the COVID-19 pandemic has introduced a level of flexibility that allows faculty to access resources and participates in training sessions remotely (Ayo et al., 2020). Although digital inclusion remains a challenge due to infrastructural limitations, this approach has proven effective in sustaining faculty engagement and continuous professional development.

International Perspectives on In-Service Training

International studies on in-service training have consistently highlighted its pivotal role in enhancing faculty' instructional capacity, student engagement, and academic achievement. Across various educational systems especially in developed countries such as Finland, Singapore, the United Kingdom, and Canada in-service training is institutionalized as a core component of teacher professional development, tightly integrated with policy mandates and curriculum reforms. For example, Ololube (2024) revealed that sustained, content-focused, and collaborative in-service training contributes significantly to faculty effectiveness and learning outcomes. In Finland, where teaching is treated as a highly respected profession, faculty receive continuous support through structured professional development programs, which are often aligned with classroom realities and current pedagogical innovations (Sahlberg, 2015). These programs are characterized by reflective teaching, peer collaboration, and institutional support, creating an environment where professional growth is both expected and well-resourced.

Similarly, in Singapore, in-service training is strategically embedded in school development plans and supported by state-sponsored institutions such as the National Institute of Education. Faculty are offered 100 hours of professional development annually, with access to customized courses, research-based learning models, and coaching systems (Goh & Lee, 2008). These programs not only improve subject mastery but also promote the use of data-driven instruction and student-centered learning strategies. The United Kingdom's Continuing Professional Development (CPD) model also offers diverse pathways ranging from short-term workshops to postgraduate certifications that equip faculty to meet evolving classroom challenges and improve student achievement (Cordingley et al., 2015). In the United States, studies by Desimone and Garet (2015) emphasized that effective in-service training must be sustained over time, include active learning components, and align with school goals to produce measurable improvements in student performance.

In contrast, in-service training in Nigeria, particularly within the South-South region, faces several structural and operational challenges that limit its alignment with these global best practices. Unlike the standardized and well-funded models found in advanced countries, in-service training in Nigeria is often sporadic, underfunded, and poorly coordinated. According to the Delta State Ministry of Education (2023), many faculty in the state reported attending in-service training only once in two to three years, with most sessions lasting for only a day or two, offering limited opportunity for in-depth learning or follow-up. Furthermore, these programs rarely involve practical demonstrations or classroom integration strategies, resulting in a disconnect between the training content and actual teaching demands. The Rivers State Ministry of Education (2022) also acknowledged that most training programs lack specific goals, monitoring systems, and incentives, leading to low motivation and negligible impact on student outcomes. Notwithstanding these gaps, some parallels can be drawn between global practices and emerging trends in Nigerian in-service training.

Notably, Desimone and Garet (2015) emphasized that the increasing use of digital platforms for professional development during the COVID-19 pandemic has mirrored global innovations, allowing Nigerian faculty to access Massive Open Online Courses (MOOCs), webinars, and online resource portals. However, the limited digital infrastructure in many South-South universities and secondary schools constrains the effective utilization of these tools. Ekanem and Alabo (2020) emphasized the need for digital literacy training among faculty in the region to ensure they can fully benefit from online in-service training resources. To adapt global

best practices to the South-South Nigerian context, several strategies can be considered. Firstly, institutionalizing teacher development by embedding in-service training into annual school and university development plans as seen in Singapore would help formalize and prioritize the process. This approach should be supported by legislative backing and adequate funding from state education ministries. Secondly, programs should be designed to promote collaborative learning through professional learning communities (PLCs), where faculty reflect, plan, and solve instructional problems together. This strategy, widely adopted in Canada and the UK, fosters ownership and accountability among faculty.

Thirdly, training modules should be localized, taking into account the region's socio-environmental challenges, such as those related to oil exploration and flooding, so that EE becomes not just theoretical but directly relevant to students' lived experiences. Moreover, the use of peer coaching, mentoring, and school-based professional learning, which are common in international contexts, can be incorporated into the Nigerian system. These methods enable real-time feedback and provide ongoing support that is often lacking in Nigeria's one-off workshop model. As highlighted by Onoyume and Ede (2021), faculty who receive post-training classroom support are more likely to implement new strategies effectively, thus improving student outcomes. Furthermore, ensuring training duration is sufficient typically over several weeks or spaced out in manageable sessions can lead to better assimilation and practical application of knowledge, in contrast to the current Nigerian model where training is compressed into short, intensive sessions that overload participants without ensuring comprehension.

A critical component also lies in building strong monitoring and evaluation frameworks to assess the impact of in-service training on student performance. International models often use tools such as student performance data, classroom observations, and teacher self-assessment to gauge the effectiveness of training. Nigerian institutions can adapt similar models to gather feedback, make necessary adjustments, and ensure that training is responsive to the actual needs of educators and learners. Incorporating these evaluation tools can improve program quality and enhance accountability, two areas where current Nigerian systems are notably weak. Therefore, while the global perspectives of in-service training offers a wealth of practices that have been proven to improve academic performance, the Nigerian context, particularly in the South-South region, requires a contextualized and deliberate approach to professional development. With appropriate policy reforms, strategic investment, and a commitment to quality and relevance, Nigeria can leverage international insights to transform its in-service training systems into robust engines of educational growth and student success.

CONCLUSION

The literature reviewed clearly emphasized that in-service training is a determinant in the enhancement of academic performance of EE students in South-South Nigeria, where universities face a range of challenges including infrastructural limitations, outdated instructional methods, and inadequate professional development support. The studies reveal that despite the presence of regional and international frameworks for professional development, most in-service training programs in the region are underfunded, irregular, and poorly aligned with the contextual realities of EE. However, when designed with relevant curriculum content, delivered through effective pedagogical strategies, and supported by sufficient duration and institutional commitment, in-service training has the potential to transform teaching effectiveness and learning outcomes. The integration of global best practices such as peer collaboration,

continuous assessment, and technology-based delivery into locally contextualized training models can significantly enhance the knowledge base and instructional competencies in EE faculty. Therefore, sustained investment, policy support, and coordinated efforts by educational authorities across South-South Nigeria are essential for ensuring that in-service training becomes a tool for institutional improvement and student academic success.

Recommendations

Based on the outcomes of this exploration's findings, the following practical recommendations are proposed to enhance the effectiveness of in-service training programs for EE faculty in South-South Nigeria.

- It is recommended the Nigerian University Commission (NUC) that they mandate standardized and periodic in-service training programs across universities in South-South Nigeria to ensure consistency in teaching quality and improved academic outcomes in EE.
- University Administrators in South-South Nigeria should allocate specific budgetary provisions annually for in-service training to guarantee continuous professional development tailored to EE lecturers.
- The Federal and State Ministries of Education bodies should collaborate to design and implement regionally responsive training curricula that address the unique environmental and educational challenges faced in the South-South region.
- Educational donor agencies and NGOs are encouraged to support the development and delivery of faculty training workshops through funding and technical expertise to enhance instructional capacity in EE.
- EE departments in universities should initiate internal needs assessments regularly to determine specific faculty development gaps and organize targeted in-service training that directly addresses those gaps.

MANAGING FUNCTIONAL CURRICULUM FOR TECHNOLOGICAL DEVELOPMENT AND SELF-RELIANCE IN NIGERIA

Stella Chinenyenwa UKONU
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

The study explores the concept of a functional curriculum as a strategic approach to enhancing technological development and fostering self-reliance in Nigeria. It highlights the pressing need for a shift from traditional, theory-based educational frameworks to a more practical, skills-oriented curriculum that addresses the high rates of youth unemployment and dependency on foreign technologies. By emphasizing experiential learning, critical thinking, and entrepreneurial skills, a functional curriculum aims to equip students with competencies essential for navigating the 21st-century labor market. The research identifies significant gaps in the current educational system, which often fails to produce graduates with the necessary practical skills required by employers. It argues that implementing a functional curriculum could bridge this gap, promoting economic independence and technological innovation. The study also addresses challenges such as inadequate resources, insufficient teacher training, and resistance to change within educational institutions. Ultimately, it posits that a well-structured functional curriculum could serve as a catalyst for national development, enabling Nigeria to transition from being a consumer of foreign technology to a producer of local innovations.

Keywords: Functional Curriculum, Technological Development, Self-Reliance.

INTRODUCTION

The quest for sustained technical advancement and economic self-sufficiency is a paramount objective for emerging countries, especially Nigeria, where young unemployment and reliance on foreign technology pose considerable obstacles. A transition in the educational paradigm from a primarily theoretical framework to a more practical, skill-oriented curriculum is well acknowledged as crucial to tackle these challenges (Okolie et al., 2019). Functional education, emphasizing practical, real-world skills, is seen as a catalyst for creativity, entrepreneurship, and self-sufficiency. The incorporation of a functional curriculum is proposed as a means to equip Nigerian students to become proficient, self-sufficient persons who can significantly contribute to national development (Akanbi & Iyabo, 2016). This paper examines the notion of a functional

curriculum and its potential as a solution to the technical and economic difficulties confronting Nigeria.

Notwithstanding Nigeria's significant investment in education, the system has faced challenges in producing outputs that correspond with labour market requirements and technological progress. A multitude of Nigerian graduates encounter unemployment owing to an absence of practical skills and competences pertinent to modern companies (Udoh & Akpan, 2017). A functional curriculum provides a systematic approach to address this disparity by cultivating problem-solving, critical thinking, and entrepreneurial competencies, which are vital for the 21st-century labour market. Olaitan and Aliyu (2019) assert that the lack of these competences in the conventional curriculum has impeded Nigerian young from attaining economic self-sufficiency, leading to a workforce that is excessively dependent on restricted employment options within a narrow labour market.

A functional curriculum distinguishes itself from traditional educational models by emphasising skill development, experiential learning, and practical applications rather than rote memorisation and theoretical understanding. This methodology strongly corresponds with the educational objectives specified by the Nigerian National Policy on Education, which prioritises the cultivation of self-sufficient individuals capable of societal transformation via practical skills (Federal Republic of Nigeria, 2014). In this context, functional education encompasses not only the utilisation of tools and technologies but also the cultivation of an entrepreneurial mindset and the ability for lifelong learning, which are crucial for adapting to a swiftly evolving technological environment (Ibrahim & Musa, 2018).

Furthermore, several studies have emphasised the correlation between functional education and technological innovation, indicating that nations with skill-oriented educational frameworks are likely to cultivate more adaptive, creative, and technically adept workforces (Asogwa & Dim, 2016). In South Korea, a comparable transition to a skills-oriented curriculum considerably facilitated the nation's evolution from a developing economy to a worldwide technology powerhouse. Nigeria, characterised by its young demographic and abundant natural resources, have the potential to emulate a comparable trajectory provided educational reforms emphasise practical skills and innovation (Ogundele & Ojo, 2020).

Notwithstanding the acknowledged promise of a functional curriculum, its execution in Nigeria has faced several obstacles, such as insufficient money, poor facilities, and opposition from educators familiar with conventional teaching techniques (Okebukola, 2015). A multitude of Nigerian schools continues to be deficient in essential resources for practical education, including well equipped labs, workshops, and technical facilities. Moreover, many educators are ill-equipped to implement a functioning curriculum, lacking the requisite specialised training to successfully instruct vocational and technical topics (Izuagba & Obiefuna, 2021). Implementing a viable curriculum would remain difficult without sufficient support, highlighting the need for a collaborative effort among the government, corporate sector, and educational institutions.

Functional education is essential for mitigating the elevated young unemployment rate in Nigeria, since it cultivates an entrepreneurial attitude that enables students to generate their own possibilities instead of depending on scarce formal jobs. Adebayo and Ogunlade (2019) assert that entrepreneurship education integrated into a functional curriculum can enable students to acquire skills essential for identifying market gaps, devising innovative solutions, and establishing sustainable enterprises. This method corresponds with international trends, as nations globally are progressively integrating entrepreneurship into their educational frameworks to equip youth for unpredictable job markets (Ezeani, 2016). Implementing a functional

curriculum will enable Nigeria to equip its youth with the skills necessary for economic independence, thus alleviating poverty and promoting social stability.

A functional curriculum might be essential in transitioning Nigeria from a consumer of foreign technology to a creator of local ideas. The focus on STEM (Science, Technology, Engineering, and Mathematics) education has demonstrated efficacy in cultivating innovation and technological competencies among students (Adamu & Yakubu, 2021). Countries such as China and India have experienced substantial economic growth propelled by STEM-oriented educational policies, which have developed a highly proficient workforce in technology-centric industries. Adopting a comparable strategy in Nigeria may foster indigenous technology development, diminish import dependence, and enhance the country's technical foundation (Okeke & Onah, 2017).

Statement of the Problem

Nigeria's education system has long been criticized for its emphasis on theoretical knowledge over practical skills, resulting in a workforce that is largely unprepared for the demands of the modern economy. Despite various educational reforms, the country continues to grapple with high unemployment rates, low technological advancement, and a dependency on foreign expertise and products. Many graduates lack the technical and vocational competencies required for self-reliance and national development, thereby contributing to the growing issue of graduate unemployment and underemployment. According to NBS (2022), Nigeria's unemployment rate has been rising, particularly among young graduates who struggle to find jobs due to a mismatch between their academic training and industry requirements. This highlights a fundamental flaw in the curriculum, which prioritizes rote memorization over critical thinking, problem-solving, and skill acquisition.

Furthermore, the country's slow pace of technological innovation and industrialization is directly linked to the inadequacies of the education system. The absence of a functional curriculum that integrates technical education, digital literacy, and entrepreneurial training has left Nigeria lagging behind in global technological advancements. Countries that have adopted functional education systems, such as Germany and China, have successfully bridged the gap between education and industry by emphasizing STEM education, vocational training, and hands-on learning. In contrast, Nigeria's curriculum remains outdated and misaligned with contemporary economic needs, hindering national progress and self-sufficiency.

Another critical challenge is the lack of adequate funding and infrastructural support for technical and vocational education in Nigeria. Many schools lack well-equipped science laboratories, ICT centers, and skilled instructors, making it difficult for students to acquire practical knowledge. As a result, industries often prefer hiring foreign-trained professionals over locally trained graduates, further deepening Nigeria's dependency on external expertise. This trend not only weakens the nation's economic stability but also limits opportunities for local technological innovations and industrial expansion.

Given these pressing issues, there is an urgent need to adopt a functional curriculum that emphasizes technical skills, entrepreneurship, and innovation-driven learning. Such a curriculum would equip students with the necessary competencies to become self-reliant, employable, and contributors to national technological development. This study, therefore, seeks to examine how a functional curriculum can serve as a panacea for Nigeria's technological and economic

challenges, ensuring that education becomes a tool for sustainable development and self-sufficiency.

THEORETICAL FRAMEWORK

Human Capital Theory (HCT)

The Human Capital Theory (HCT) underpins this study on functional curriculum as a panacea for technological development and self-reliance in Nigeria. This theory was initially developed by Adam Smith (1776) in his seminal work The Wealth of Nations and was later expanded by Theodore Schultz (1961) and Gary Becker (1964). The Human Capital Theory posits that investment in education, training, and skills acquisition enhances the productivity and economic potential of individuals, which, in turn, contributes to national development. Schultz (1961) emphasized that education is not just a consumption good but an investment that yields returns in the form of economic growth and technological advancement. Becker (1964) further elaborated on the idea by asserting that human capital knowledge, skills, competencies, and abilities plays a crucial role in determining economic productivity and self-reliance.

Recent studies have reaffirmed the significance of human capital development in technological innovation and economic growth. Hanushek and Woessmann (2020) argue that cognitive skills, gained through quality education, directly impact economic development by fostering technological progress and industrial competitiveness. Similarly, Olanrewaju and Aluko (2021) assert that nations investing in education and skill acquisition witness higher economic stability and reduced unemployment. Their study emphasizes that a curriculum emphasizing technical and vocational skills equips individuals with the competencies needed for self-reliance and industrialization. Additionally, Okafor et al. (2019) note that African countries with a structured and functional curriculum in science and technology have made significant progress in reducing dependency on foreign technology.

The Human Capital Theory aligns with this study by emphasizing the need for a functional curriculum that equips learners with practical and technical skills essential for technological advancement and self-reliance. Nigeria's current education system is largely theoretical, failing to develop the required human capital for industrial growth and self-sustaining economic activities. The theory suggests that by investing in a curriculum that prioritizes skill acquisition, entrepreneurship, and technological competencies, the country can enhance its human capital, leading to increased employment opportunities, economic independence, and innovation-driven development. This connection highlights the urgent need for curriculum reform that focuses on STEM (Science, Technology, Engineering, and Mathematics) education, vocational training, and digital literacy to create a workforce capable of driving technological progress.

The Human Capital Theory is highly relevant to this study as it provides a theoretical foundation for advocating a shift from a knowledge-based curriculum to a skill-based one. First, the theory underscores the role of education in economic development by stressing that a well-educated workforce enhances a nation's technological and industrial capabilities (Hanushek & Woessmann, 2020). This means that Nigeria's ability to achieve self-reliance depends on how well its education system prepares students for real-world challenges. Second, the theory highlights the need for continuous investment in human capital, particularly in teacher training, curriculum development, and infrastructure, to create an education system that fosters problem-

solving and innovation (Olanrewaju & Aluko, 2021). Without a curriculum that aligns with the demands of modern economies, Nigeria will continue to lag in technological advancements.

Furthermore, the theory emphasizes the importance of vocational and technical education, which is critical for developing self-reliant individuals who can contribute to national industrialization (Okafor et al., 2019). In countries like Germany and China, where vocational education is highly integrated into the school system, technological innovations have been rapid, and unemployment rates are significantly lower compared to nations that focus solely on theoretical education. If Nigeria adopts a functional curriculum that prioritizes skill acquisition and problem-solving, the country will not only develop a technologically competent workforce but also reduce reliance on foreign expertise and products.

Additionally, the Human Capital Theory supports the idea that education should be tailored to national needs. This means that the curriculum should be designed to address Nigeria's socio-economic and technological challenges by incorporating digital literacy, artificial intelligence, entrepreneurship, and industrial skills into school programs (Hanushek & Woessmann, 2020). By doing so, graduates will be more adaptable to the labor market, reducing the burden of unemployment and underemployment.

CONCEPTUAL VERIFICATION

The notion of a functional curriculum prioritises pragmatic, skills-oriented education aimed at providing students with the abilities necessary for success in real-world environments. A functional curriculum, in contrast to traditional curricula that emphasise theoretical knowledge and rote memorisation, incorporates practical applications, experiential learning, and critical thinking exercises to equip students for immediate contributions in their communities and workplaces (Ogunode & Adamu, 2020). This methodology is especially pertinent in developing nations such as Nigeria, where a substantial disparity exists between the skills imparted at educational institutions and those demanded by the labour market. Functional education is seen as a remedy for this disconnection, with the objectives of decreasing unemployment, enhancing self-sufficiency, and advancing technical progress (Adebayo & Nwogu, 2017).

A functional curriculum extends beyond vocational education or manual skills; it includes a wider array of competences such as cognitive, technical, social, and entrepreneurial skills. This comprehensive approach corresponds with the educational objectives specified by the Nigerian National Policy on Education, which promotes a curriculum aimed at cultivating "self-reliant and productive citizens" (Federal Republic of Nigeria, 2014). In this setting, functional education emphasises curriculum material that is directly relevant to students' everyday lives and future professions, facilitating a seamless transfer from the classroom to the workplace (Ajiboye & Adebayo, 2018).

The essence of functional education is in the conviction that education must have a practical purpose beyond mere academic success; it should equip learners to address real-world challenges. This viewpoint corresponds with Dewey's pragmatism, which posits that learning must be experienced and pertinent to societal demands (Adeleke & Omolara, 2019). In Nigeria, where young unemployment remains a chronic problem, an effective curriculum offers pupils the opportunity to develop marketable skills, diminishing reliance on official employment and fostering entrepreneurial endeavours (Okafor & Nwaneri, 2021). Functional education, therefore, emphasises imparting skills in sectors like as agriculture, information technology, and entrepreneurship, all of which have direct relevance to the Nigerian economy.

A functional curriculum fosters critical thinking, creativity, and flexibility, which are vital abilities in the continually expanding global economy. These abilities are especially critical in the technology-driven Fourth Industrial Revolution, where employment needs are always evolving owing to advancements in automation, artificial intelligence, and information technology (Agbo & Igwe, 2020). A curriculum that allows students to use their knowledge flexibly and innovatively is essential for cultivating self-sufficient people capable of contributing to technological advancement. This is particularly important for Nigeria, as the country attempts to cultivate a workforce capable of propelling its technological progress (Onyeike & Amadi, 2021).

A functional curriculum coincides with the objectives of lifelong learning, promoting the constant acquisition of new skills and information throughout one's life. Lifelong learning is especially significant in Nigeria, enabling people to adjust to changes in the labour market and economic environment. The conventional curriculum, mostly focused on test success, insufficiently equips students for continuous skill enhancement and adaptability. A functional approach promotes ongoing learning and enhancement, cultivating a workforce that is adaptable and sensitive to market requirements (Usman & Yakubu, 2016).

Moreover, functional education prioritises cooperation and teamwork, competencies vital in contemporary businesses that increasingly depend on team-oriented initiatives and problem-solving. Studies indicate that students participating in collaborative learning via a functional curriculum acquire technical skills while also enhancing their communication, leadership, and interpersonal abilities (Olaitan & Aliyu, 2019). These competencies are essential for self-sufficiency, as they empower people to collaborate efficiently, allocate resources judiciously, and spearhead activities that benefit their communities. In a varied and populous nation such as Nigeria, these competences may markedly improve social cohesion and economic productivity.

A major obstacle to the implementation of a functional curriculum in Nigeria is the lack of facilities and resources essential for practical learning. Numerous educational institutions are deficient in labs, workshops, and technological resources essential for a practical, skills-oriented curriculum (Ogunode & Adamu, 2020). Moreover, there exists a deficiency of qualified educators proficient in providing practical education. Nwagwu (2018) asserts that educators in Nigeria often lack the requisite expertise to successfully teach technical and vocational topics, hence compromising the objectives of functional education. Resolving these infrastructural and human resource difficulties is crucial for the effective execution of a viable program.

A functional curriculum encompasses disciplines such as STEM (Science, Technology, Engineering, and Mathematics), vocational training, and entrepreneurship. These topics are particularly relevant to Nigeria's developmental requirements, since they correspond with critical industries like agriculture, industry, and information technology (Okoye & Ojo, 2017). A functional curriculum that equips students with industry-relevant skills may facilitate economic diversification, reduce reliance on oil income, and promote sustainable economic development. A STEM-oriented curriculum may cultivate a workforce that supports local industries, while entrepreneurship education equips students to establish and run their own enterprises, so fostering self-sufficiency.

Nigerian Curriculum and its Shortcomings

The Nigerian education system has undergone various transformations over the years, each aimed at aligning the curriculum with the nation’s social, economic, and technological needs.

Nigeria's formal education traces its roots to the colonial period when British missionaries established schools that primarily focused on religious and literary education (Aluede & Omoruyi, 2014). This early curriculum emphasized literacy, numeracy, and Christian religious studies, with minimal emphasis on technical or vocational training. Consequently, the colonial curriculum served the needs of the British administration, preparing students for clerical jobs rather than equipping them with skills for industrial or economic development (Fafunwa, 2018). This legacy of a theory-based, non-functional curriculum set the tone for Nigeria's education system, a structure that would prove inadequate for the nation's evolving demands in the post-independence era.

After gaining independence in 1960, Nigeria recognized the need to develop an indigenous curriculum that could support national development. The government sought to design an education system that would address the skills gap in the workforce and reduce reliance on foreign-trained personnel. The 1969 National Curriculum Conference marked a critical turning point, where educators, policymakers, and stakeholders gathered to deliberate on transforming Nigeria's curriculum to include more technical, vocational, and science-oriented subjects (Federal Ministry of Education, 2014). This led to the formulation of the National Policy on Education in 1977, which emphasized self-reliance, practical skills, and nation-building. Although this policy represented a shift from the colonial curriculum, it struggled to achieve its goals due to various challenges, including poor implementation, lack of resources, and limited teacher training (Okoro & Ezeugwu, 2016).

One of the primary shortcomings of the Nigerian curriculum has been its inadequate focus on practical skills. Historically, the curriculum has remained largely theoretical, focusing on examinations and rote learning rather than skills acquisition and application. This traditional model has led to a high rate of unemployment among graduates, who often lack the competencies required by the labor market (Adeyemi & Uko-Aviomoh, 2018). For instance, the secondary school curriculum, which still centers on academic subjects, has not adequately prepared students for technical or vocational careers. As a result, the education system has continued to produce graduates who are ill-equipped for self-employment or entrepreneurship, thereby exacerbating the problem of youth unemployment in Nigeria (Agu, 2020).

Another significant shortcoming is the curriculum's limited alignment with Nigeria's socio-economic realities. Although the country has undergone substantial economic, technological, and demographic changes, the curriculum has struggled to keep pace. For example, as Nigeria's economy diversified into sectors such as information technology and agriculture, the curriculum did not evolve accordingly, leaving students without the skills to participate effectively in these industries (Olawale & Yusuf, 2021). In addition, subjects like entrepreneurship and digital literacy were only recently introduced into the curriculum, resulting in a mismatch between educational outcomes and labor market needs. This misalignment has hindered the country's efforts to foster self-reliance and economic growth through education.

Moreover, inadequate teacher preparation has impeded the effective delivery of the curriculum. Many teachers in Nigeria are trained in traditional, lecture-based methods and lack the skills to teach technical and vocational subjects effectively. As Okebukola (2015) points out, the absence of teacher training programs focused on functional and skills-based teaching methods has made it difficult for educators to implement a curriculum aimed at practical learning. Consequently, even when vocational subjects are included in the curriculum, they are often taught in a theoretical manner, further limiting students' ability to gain practical skills (Usman & Yakubu, 2016).

In addition, Nigeria's curriculum has suffered from poor funding and resource allocation. Schools often lack the infrastructure, tools, and facilities required to support hands-on learning, especially in rural and under-resourced areas. Laboratories, workshops, and technology equipment, essential for practical learning, are frequently unavailable, leaving students to learn technical subjects through lectures rather than practical experiences (Ajibola & Awodun, 2019). This shortage of resources reflects broader issues within the education sector, where budget allocations are insufficient to meet the growing demand for a functional curriculum that emphasizes STEM (Science, Technology, Engineering, and Mathematics) education (Ibrahim & Musa, 2018). The absence of such facilities has prevented students from acquiring relevant skills, particularly in fields like engineering, agriculture, and technology.

Furthermore, the Nigerian curriculum has been criticized for lacking cultural relevance and contextualization. While education should ideally incorporate elements of local culture, language, and indigenous knowledge, the Nigerian curriculum has often neglected these components, adhering instead to foreign models that do not reflect the unique needs and values of Nigerian society (Adeleke & Omolara, 2019). This lack of cultural relevance has contributed to the disconnection between students and their communities, as many students are taught content that feels removed from their daily experiences and societal challenges. For example, the neglect of indigenous knowledge in agriculture and environmental management means that students are often unaware of sustainable practices that have been effective in local contexts for generations (Nwagwu & Obiefuna, 2021).

The Nigerian curriculum has struggled with policy inconsistencies, which have hindered long-term educational reform. Changes in government and frequent policy shifts have led to instability in the education system, as each administration introduces new policies without adequately following through on existing reforms (Ogunode, 2020). This lack of continuity has created a fragmented curriculum framework that fails to build on previous policies. As a result, even promising initiatives aimed at implementing a functional curriculum are often abandoned midway, with each new policy cycle restarting the process of educational reform rather than building a cohesive, long-term strategy (Okoro & Ezeugwu, 2016).

TECHNOLOGICAL DEVELOPMENT AND SELF-RELIANCE

Role of Technological Development in Economic Growth

Technological development is a powerful catalyst for economic growth. In a globalized economy, nations that lead in technological innovation tend to experience higher rates of growth, reduced poverty, and improved standards of living. In the context of Nigeria, the country’s heavy reliance on oil as a primary source of revenue has made it vulnerable to global price fluctuations and external economic shocks. For Nigeria to achieve sustainable growth, there is an urgent need to shift focus toward technological advancement as a driver of economic diversification. The adoption of advanced technologies in agriculture, healthcare, education, manufacturing, and energy sectors can enhance productivity, reduce costs, and open up new market opportunities.

In recent years, Nigeria has seen an increase in the adoption of technology in sectors such as mobile banking, fintech, and agritech, which have become important contributors to economic growth. According to a report by the Nigerian Communications Commission (2020), the country’s tech industry grew by over 15% annually, contributing significantly to the GDP. The rise of startups, particularly in Lagos, which has been dubbed "the Silicon Valley of Africa,"

reflects the increasing potential for technology-driven growth. However, for this progress to be sustained and expanded, it is critical to have a skilled workforce capable of understanding and applying cutting-edge technologies. This is where a functional curriculum comes into play, providing the necessary foundation for students to excel in technology-related fields.

The Role of a Functional Curriculum in Technological Development

A functional curriculum is one that is relevant, responsive, and adaptable to the current and future needs of the labor market. In the case of technological development, a functional curriculum should emphasize Science, Technology, Engineering, and Mathematics (STEM) education, as well as foster practical, hands-on learning. STEM education has been recognized globally as a key pathway to technological innovation and economic competitiveness (Zhou & Zhang, 2020). In Nigeria, however, the education system has traditionally focused on theoretical knowledge, leaving students ill-prepared to apply their learning in real-world contexts. The gap between theoretical education and practical skills has hindered the country's progress toward becoming a technologically advanced nation.

By integrating more practical elements into the curriculum, such as coding, robotics, artificial intelligence, and biotechnology, students would be better equipped to contribute to technological advancements. Furthermore, the introduction of technology-focused vocational training programs can address the shortage of skilled labor in fields such as software development, electronics, and automation. A study by Akinmoladun and Olatunji (2019) highlights the importance of aligning educational programs with technological trends in order to produce graduates who are ready to meet the demands of a rapidly changing job market. For example, graduates trained in advanced technologies are more likely to be employable in industries like telecommunications, energy, and manufacturing, which are central to Nigeria's economic diversification agenda.

Self-Reliance and Economic Empowerment

Self-reliance is a concept that emphasizes the ability of individuals to generate income, create employment, and contribute to national development without excessive dependence on government or external support. In the context of education, self-reliance can be promoted through entrepreneurship education, which empowers individuals to start and sustain businesses, thereby contributing to job creation and poverty reduction. A functional curriculum that includes entrepreneurship education as a core component can enable students to develop the skills needed to identify business opportunities, manage resources, and navigate the complexities of the modern business environment.

Entrepreneurship education provides students with the tools to become independent and self-sufficient, encouraging them to innovate and create solutions to societal problems. For Nigeria, which faces high levels of youth unemployment, entrepreneurship can offer an alternative pathway to economic prosperity. According to a report by the National Bureau of Statistics (2020), the youth unemployment rate in Nigeria stood at 33%, underscoring the urgent need for alternative solutions to job creation. Entrepreneurship education can help mitigate this crisis by equipping young people with the skills to start businesses, especially in emerging sectors like technology, agriculture, and renewable energy.

Furthermore, a functional curriculum can incorporate local economic realities and challenges into the learning process, allowing students to develop solutions tailored to their specific communities. For instance, students could engage in projects that address local issues, such as creating agricultural technologies that improve food production or developing mobile apps that provide access to essential services in rural areas. By fostering innovation in these areas, a functional curriculum helps create a generation of self-reliant individuals who can contribute to the development of their communities and the country as a whole.

Addressing Unemployment and Promoting Economic Stability

The relationship between technological development, self-reliance, and unemployment is clear: by equipping the workforce with the skills needed to innovate, produce, and create, a functional curriculum can contribute to lowering unemployment rates. When individuals are trained in technological skills, they are more likely to secure employment in high-demand sectors, thus reducing the strain on the government to provide jobs. Additionally, the promotion of entrepreneurship through education empowers individuals to become job creators rather than job seekers, further alleviating unemployment.

Entrepreneurship education also enhances economic stability by fostering a culture of innovation and problem-solving. As individuals create businesses that solve local and national challenges, they contribute to the diversification of the economy, reducing the country's reliance on a few sectors like oil. For instance, Nigeria's booming tech industry, driven by entrepreneurs and skilled professionals, has contributed to the country's economic growth and resilience, even in the face of global economic challenges. According to the World Bank (2021), Nigeria's tech sector was one of the fastest-growing sectors in the country, demonstrating the potential of technology and entrepreneurship to drive economic diversification and self-reliance.

THE RELATIONSHIP BETWEEN FUNCTIONAL CURRICULUM AND TECHNOLOGICAL DEVELOPMENT

Providing Students with Practical Competencies for Technology-Driven Sectors

A primary purpose of a functional curriculum is to cultivate graduates who are both informed and adept at applying their knowledge in practical, real-world contexts. This is especially vital for technology-driven sectors, where practical skills, analytical reasoning, and creativity are required (Onyeike & Amadi, 2021). A curriculum that incorporates science, technology, engineering, and mathematics (STEM) disciplines, with practical abilities in information technology and digital literacy, guarantees that students acquire the competences required in contemporary sectors.

A functional curriculum in Nigeria may mitigate skill deficiencies in fields such as information technology, telecommunications, and engineering. Research indicates that integrating project-based learning, simulations, and technical training into the curriculum fosters a problem-solving attitude crucial for technological advancement (Okebukola & Kola, 2019). A functional curriculum prioritising practical skills above academic knowledge will directly facilitate Nigeria's economic and technical progress.

Fostering Innovation and Entrepreneurship via Education

Technological advancement is often propelled by creativity and entrepreneurship, and an effective curriculum may foster these qualities by promoting creative and independent thinking among students. Functional education fosters competencies such as creativity, critical thinking, and flexibility, which are essential for cultivating a workforce capable of adapting to and propelling technological advancements (Adeleke & Omolara, 2019). Integrating entrepreneurship education into the curriculum provides students with the information and skills necessary to establish and run enterprises, particularly technology startups. In nations with elevated young unemployment, like Nigeria, cultivating entrepreneurial skills via education might stimulate self-employment and diminish reliance on conventional labour markets. A functional curriculum promotes student engagement in technology-driven entrepreneurship, facilitating the development of localised tech solutions that address specific community needs (Agbo & Igwe, 2020). This method fosters economic diversity and enhances technical growth by cultivating future innovators and corporate leaders.

Closing the Divide between Educational Standards and Industry Demands

A functional curriculum links educational material with industry standards, helping students develop skills immediately transferable in the labour market. This connection is especially crucial in disciplines like ICT, robotics, and engineering, where the fast progression of technological innovation necessitates a perpetually revised curriculum. at Nigeria, a notable difficulty has been the disparity between the skills imparted at educational institutions and those demanded by employers, particularly in technical sectors (Okoye & Ojo, 2017). Through collaborations with industry stakeholders, educational institutions may create curriculum that include new technology, therefore closing the skills gap. Students in technology programs may engage in projects related to coding, software development, or hardware repair, which are vital competencies in Nigeria's expanding tech industry (Usman & Yakubu, 2016). This pragmatic strategy guarantees that graduates are prepared for employment, minimising the need for further training by businesses and expediting the nation’s technical advancement.

Developing a Workforce Competent in Maintaining Technological Infrastructure

A functional curriculum facilitates technology advancement by cultivating a workforce adept at managing and maintaining technical infrastructure. A significant barrier to technology advancement in underdeveloped nations is the scarcity of trained workers to sustain and enhance technical systems (Olawale & Yusuf, 2021). A functional curriculum, via practical and technical training, guarantees that students possess the skills necessary to operate and troubleshoot equipment in sectors such as telecommunications, energy, and manufacturing. Nigerian educational institutions that emphasise technical education and vocational training cultivate a workforce of trained labourers capable of supporting sectors that need specialised technical competence. A functioning curriculum facilitates the initial uptake of new technologies and guarantees their sustained use, hence promoting ongoing technological growth (Adebayo & Nwogu, 2017).

Promoting Digital Literacy and Technological Adoption

Digital literacy is fundamental to effective education, equipping students to interact with technology in their everyday lives and professional endeavours. In a progressively digital society, a practical curriculum that incorporates digital competencies empowers students to use technology proficiently, hence enhancing technological adoption across all societal strata (Okafor & Nwaneri, 2021). Educational institutions prepare students for engagement in a technology-driven economy by imparting skills such as data analysis, digital communication, and internet navigation.

Furthermore, digital literacy among the populace may foster more knowledgeable and digitally engaged individuals capable of contributing to and benefiting from national technology projects. This participation significantly influences technical growth by fostering a culture that appreciates and pursues technological developments (Ogunode & Adamu, 2020).

Promoting Research and Development via Functional Education

A functional curriculum also encourages research and development (R&D) by cultivating an exploratory learning methodology. Research and innovation are crucial catalysts of technological advancement, and a curriculum that promotes student involvement in research projects establishes the groundwork for scientific exploration and creativity (Okoro & Ezeugwu, 2016). By incorporating research approaches and problem-solving initiatives into the curriculum, functional education prepares students with the competencies required for contributions to R&D in sectors such as agriculture, engineering, and medicine. Investment in research-oriented functional education in Nigeria may provide indigenous answers to critical issues in health, energy, and food security. A functional curriculum including agricultural technology may provide students with the expertise to create more effective farming methods, essential for food security and economic sustainability in the nation (Nwagwu & Obiefuna, 2021).

SELF-RELIANCE AND FUNCTIONAL EDUCATION

The Role of Functional Education in Promoting Self-Reliance

Functional education prepares individuals with hands-on skills and practical knowledge, which are essential for self-reliance. This type of education goes beyond theoretical learning, focusing on providing students with the tools they need to solve everyday problems and create economic value. By emphasizing skills in areas like agriculture, craftsmanship, entrepreneurship, and information technology, functional education can enable graduates to generate income independently rather than relying solely on formal employment (Adedoyin & Olaniyi, 2021). For instance, in Nigeria, a functional curriculum that includes vocational training has been shown to increase graduates' employability and ability to start small businesses, particularly in fields like agriculture and commerce (Okeke & Eme, 2015).

One of the key components of functional education is vocational training, which prepares students for specific careers by providing the skills needed to succeed in various trades. Vocational education allows students to learn practical skills such as plumbing, welding, and electrical work, which can be monetized immediately upon graduation. Studies have shown that vocational training can significantly contribute to self-reliance by reducing youth unemployment

and enabling individuals to support themselves and their families (Eze & Onuoha, 2016). Furthermore, vocational education fosters a sense of self-worth and independence, as individuals are able to create their own jobs and contribute to their communities.

Entrepreneurship Education and Economic Independence

Entrepreneurship education is a crucial element of functional education that supports self-reliance by encouraging individuals to pursue self-employment and business opportunities. Entrepreneurship training provides students with the skills necessary to identify market needs, develop business ideas, manage resources, and operate successful enterprises. In a country like Nigeria, where unemployment is high, entrepreneurship education can serve as a powerful tool for empowering young people to establish their own businesses rather than relying on limited job opportunities (Alabi & Yusuf, 2020). Entrepreneurship education not only enables individuals to become self-reliant but also stimulates economic growth by creating jobs and fostering innovation (Agboola & Adeniyi, 2021).

Incorporating entrepreneurship into the school curriculum encourages students to think creatively and take risks, which are critical skills for successful entrepreneurship. By learning how to navigate business challenges, students gain confidence in their ability to make decisions and manage their resources effectively. Research has shown that students who receive entrepreneurship education are more likely to start their own businesses and pursue self-employment, contributing to a culture of economic independence (Ogunyemi & Agwu, 2019). For example, graduates who have acquired entrepreneurial skills in agriculture or small-scale manufacturing are more likely to start businesses in these fields, providing products and services that are essential to their local economies.

Reducing Dependency on Government and Foreign Aid

Functional education fosters self-reliance by reducing dependency on government and foreign assistance. In many developing nations, including Nigeria, a significant portion of the population relies on government programs and foreign aid for financial support. By promoting skills that enable individuals to create their own livelihoods, functional education can reduce this dependency and promote a culture of self-sufficiency (Ogunode & Musa, 2020). As individuals become more economically independent, they are better positioned to contribute to the development of their communities and the economy as a whole.

Moreover, a self-reliant workforce driven by functional education can reduce brain drain, where educated individuals leave their country to seek better opportunities abroad. When individuals are empowered with the skills needed to succeed within their local environment, they are less likely to emigrate in search of better economic opportunities. This retention of skilled individuals not only supports national development but also reduces the reliance on foreign expertise to fill critical roles (Ademola & Olabisi, 2017). For Nigeria, retaining skilled workers through functional education can significantly contribute to building a strong, sustainable economy and reducing the need for foreign labor and technical assistance.

Preparing Graduates for the Informal Sector

A large portion of the Nigerian economy operates within the informal sector, which includes small-scale businesses, street vendors, artisans, and traders. Functional education aligns well with the needs of the informal sector by equipping students with practical skills that can be applied in various small business ventures. Studies have shown that many young Nigerians find employment in the informal sector after graduation, as the formal job market is often saturated and highly competitive (Ibrahim & Ahmed, 2019). By preparing students to work effectively in the informal economy, functional education supports self-reliance and provides them with a viable means of livelihood.

Additionally, functional education provides individuals with basic financial literacy, enabling them to manage their finances, budget effectively, and save for the future. Financial literacy is an essential aspect of self-reliance, as it allows individuals to make informed financial decisions and avoid debt. When graduates are equipped with financial management skills, they are better prepared to sustain their businesses in the informal sector, contributing to their long-term self-reliance and stability (Chukwu & Okonkwo, 2020).

Challenges and Opportunities for Functional Education in Nigeria

While functional education holds great promise for fostering self-reliance, several challenges remain in its implementation in Nigeria. These challenges include inadequate funding, a lack of trained educators, and limited infrastructure to support hands-on learning (Obikeze & Ifediora, 2018). Many schools lack the resources needed to establish vocational programs, which limits the opportunities for students to acquire practical skills. Additionally, the educational curriculum in Nigeria has historically been focused on theoretical knowledge rather than practical applications, making it challenging to shift towards a more functional approach (Adewumi & Adigun, 2016).

Despite these challenges, opportunities exist for improving the implementation of functional education. Public-private partnerships can play a crucial role in bridging the resource gap by investing in vocational training programs and providing technical expertise. Furthermore, international organizations can contribute to the development of functional education in Nigeria by supporting curriculum reforms and capacity-building initiatives for teachers (Aina & Olugbenga, 2019). With the right investment and support, functional education can become a powerful force for promoting self-reliance, economic development, and a more resilient Nigerian society.

CHALLENGES OF IMPLEMENTING A FUNCTIONAL CURRICULUM IN NIGERIA

Inadequate Funding

One of the most significant challenges to implementing a functional curriculum in Nigeria is the lack of adequate funding. Education funding in Nigeria has historically been low, which directly affects the resources available for curriculum development, instructional materials, and facilities (Akinfolarin & Rufai, 2017). Implementing a functional curriculum requires investments in vocational training equipment, laboratories, technology, and learning resources that support practical skill acquisition. Unfortunately, most Nigerian schools lack the funds to provide these

essential tools, limiting the potential for hands-on learning (Okeke & Anya, 2019). Without adequate financial resources, schools struggle to implement experiential learning activities, making it difficult to shift away from a predominantly theoretical curriculum.

Infrastructure Deficiencies

Related to funding challenges is the lack of adequate infrastructure necessary to support a functional curriculum. Many Nigerian schools lack facilities such as well-equipped laboratories, workshops, and vocational training centers that are essential for practical learning (Ogunyemi & Adeola, 2020). This is particularly problematic in rural areas, where schools often operate without basic amenities such as electricity and water, let alone specialized infrastructure. Additionally, the absence of technology and internet connectivity in many schools prevents the integration of digital literacy and ICT skills into the curriculum, which are crucial for technological development (Eze & Nwankwo, 2018). Consequently, students miss out on hands-on experiences that would prepare them for technical fields.

Lack of Trained Educators

The successful implementation of a functional curriculum requires skilled educators who can teach practical and vocational subjects effectively. However, there is a shortage of trained teachers in Nigeria who possess both theoretical knowledge and practical expertise in areas like technical education, information technology, and entrepreneurship (Onyeike & Amadi, 2021). Most teacher training programs in Nigeria still emphasize traditional, theoretical instruction rather than experiential learning methods. As a result, many teachers lack the skills needed to deliver a functional curriculum effectively. Furthermore, without ongoing professional development, teachers may struggle to keep up with industry advancements, which can lead to outdated curriculum content that does not meet the demands of modern employers (Afolabi & Ajayi, 2019).

Curriculum Misalignment with Industry Needs

Another challenge is the misalignment between the curriculum and the skills demanded by industry. In Nigeria, the educational curriculum has often been criticized for not addressing the practical skills required by employers, particularly in technical and vocational fields (Okoye & Ofoegbu, 2018). A functional curriculum requires close collaboration between educational institutions and industry stakeholders to ensure that students are learning relevant skills. However, the lack of effective partnerships between these sectors means that graduates are often ill-prepared for the workforce, leading to high unemployment rates among youth. Industry stakeholders frequently report that Nigerian graduates lack skills in problem-solving, technical expertise, and digital literacy, which are essential for productivity in today's economy (Chukwu & Okoro, 2020).

Socio-Cultural Constraints

Socio-cultural factors also present a significant barrier to the implementation of a functional curriculum. In Nigeria, there is a longstanding preference for white-collar jobs, and vocational or

technical careers are often stigmatized (Adewale & Salami, 2016). This cultural bias against vocational training discourages students from pursuing skills-based education, which is essential for self-reliance and economic empowerment. Many parents and students prioritize academic degrees over vocational training, viewing them as a more prestigious route to success. This mindset undermines efforts to implement a functional curriculum, as there is a limited demand for vocational programs. Additionally, young people may lack interest in acquiring practical skills, opting instead for conventional academic paths that are often poorly aligned with labor market demands.

Policy Inconsistencies and Lack of Political Will

Policy inconsistency and a lack of political commitment further hinder the effective implementation of a functional curriculum in Nigeria. Over the years, there have been numerous educational policies aimed at improving the relevance of the curriculum, but these policies are often inconsistently applied or abandoned due to changes in political leadership (Obikeze & Ifediora, 2018). Moreover, there is limited accountability and monitoring to ensure that schools adhere to curriculum reforms. Without strong political will and consistent policy implementation, efforts to promote a functional curriculum remain ineffective. Education reforms require sustained government commitment, strategic planning, and support from relevant stakeholders, which are often lacking in the Nigerian context (Ojo & Egbujie, 2020).

Resistance to Change within the Educational System

Resistance to change is another obstacle, as both educators and administrators may be reluctant to embrace a new curriculum that diverges from traditional teaching methods. A functional curriculum requires a shift from rote learning to experiential learning, which may be unfamiliar to educators who are accustomed to lecture-based instruction (Okonkwo & Ifediora, 2019). This resistance is often compounded by a lack of training on the benefits and methods of delivering a functional curriculum, as well as a shortage of incentives for educators who take on the additional responsibilities of practical instruction. Consequently, the resistance to change hinders the adoption of new teaching methodologies and maintains the status quo, limiting students' exposure to practical skills.

Inadequate Evaluation and Assessment Systems

Implementing a functional curriculum also requires an assessment system that evaluates practical skills, yet Nigeria's examination-oriented system remains focused on theoretical knowledge. Current assessment models primarily rely on written exams, which do not effectively measure students' hands-on competencies and critical thinking abilities (Nwogu & Ukaegbu, 2017). To fully implement a functional curriculum, Nigeria needs to adopt assessment methods that reflect students' practical skills, such as project-based assessments, internships, and skill-based tests. The lack of an appropriate evaluation system that values hands-on skills undermines the effectiveness of a functional curriculum and reinforces the focus on rote memorization.

IMPACT OF FUNCTIONAL CURRICULUM ON TECHNOLOGICAL SKILLS

Enhancing Digital Literacy and ICT Skills

One of the most direct impacts of a functional curriculum on technological skills is the enhancement of digital literacy and information and communication technology (ICT) skills among students. In a functional curriculum, digital literacy is integrated as a fundamental component, preparing students to interact with technology in meaningful ways. By including courses that cover basic to advanced computer skills, coding, data analysis, and digital tools, students gain familiarity with technology from an early age (Eze & Okeke, 2018). These foundational skills are essential in today's digital economy, where almost every field requires a certain level of proficiency with computers and digital applications.

Furthermore, as ICT becomes a more integral part of work and communication, equipping students with these skills also helps them keep pace with global technological advancements. For example, through practical courses in digital media, cybersecurity, and network management, students learn how to utilize and secure digital resources. In Nigeria, where there is an increasing demand for digitally competent workers, a functional curriculum that prioritizes ICT training can be instrumental in building a workforce capable of meeting these demands (Ademola & Olaniyi, 2020).

Fostering Innovation and Creativity

A functional curriculum also supports the development of technological skills by fostering innovation and creativity. Rather than limiting students to rote memorization and theoretical knowledge, a functional approach encourages them to experiment, create, and apply their knowledge to real-world problems. By working on hands-on projects, students can develop innovative solutions and apply critical thinking, which is essential in technology-driven fields (Olawale & Akinbode, 2019). For example, incorporating robotics, electronics, and design thinking into the curriculum allows students to explore technology creatively, enhancing their ability to innovate.

Innovation is critical in Nigeria's quest to build a technology-based economy, and a functional curriculum can support this by providing students with opportunities to work with emerging technologies. Through project-based learning, students can explore areas like artificial intelligence (AI), machine learning, and mobile app development. This approach not only strengthens students' technological skills but also cultivates an entrepreneurial mindset, as they are encouraged to think of practical applications for their ideas. By fostering a culture of innovation, a functional curriculum enables students to contribute meaningfully to the technology sector, potentially leading to new products, services, and startups that drive economic growth.

Preparing Students for Technical Careers

Incorporating technology-focused subjects into the curriculum also directly prepares students for careers in technical fields, addressing Nigeria's growing demand for skilled professionals in areas like engineering, information technology, and manufacturing. A functional curriculum that emphasizes practical skill acquisition helps students gain hands-on experience in operating

technical equipment, understanding software applications, and troubleshooting technological issues. By working with actual tools and technologies, students gain confidence in their skills, preparing them for immediate employment in various tech-based careers (Okonkwo & Uche, 2017).

Moreover, vocational and technical training as part of a functional curriculum prepares students for the workforce by teaching them specific skills needed in technology-related jobs. This is particularly beneficial in Nigeria, where industries such as telecommunications, oil and gas, and ICT are among the most prominent employers. Students who are trained in fields like computer engineering, telecommunications, and software development are more likely to find employment opportunities in these sectors, reducing the skills mismatch that often leads to unemployment. This alignment of curriculum with industry needs can make Nigeria's workforce more competitive globally and contribute to the country's economic growth (Omole & Ajayi, 2021).

Encouraging Problem-Solving and Critical Thinking

A functional curriculum that incorporates technology-oriented learning also strengthens students' problem-solving and critical thinking skills, which are essential for navigating complex technological environments. Rather than teaching students to memorize facts, a functional curriculum emphasizes understanding processes, diagnosing issues, and applying knowledge to solve problems. For example, students might learn coding not only by writing lines of code but by debugging errors and optimizing their programs, which requires a deep understanding of the underlying technology (Ibrahim & Nwachukwu, 2020).

Problem-solving and critical thinking are particularly valuable in technology careers, where issues are often complex and require creative solutions. Students trained in these skills can adapt to rapidly evolving technologies and are better equipped to contribute to technological advancements in fields such as software development, data analysis, and network administration. By nurturing these competencies, a functional curriculum prepares students to excel in technology-driven roles and enables them to adapt to new challenges as the tech landscape evolves.

Supporting Entrepreneurship in Technology

In addition to preparing students for employment, a functional curriculum that emphasizes technological skills also supports entrepreneurship in technology. By teaching students how to create, manage, and scale technology-based products and services, functional education enables students to start their own businesses. This is crucial in Nigeria, where youth unemployment remains high, and entrepreneurship is a vital alternative to traditional employment (Chukwu & Aina, 2018). With skills in areas like mobile app development, web design, and digital marketing, students can leverage technology to create startups that cater to local and global markets.

Functional education encourages students to view technology as a tool for innovation and economic empowerment. By learning how to identify market needs and design tech-based solutions, students develop the skills necessary for launching and growing their own ventures. Additionally, the curriculum can include entrepreneurship training that covers business management, marketing strategies, and financial planning, which are critical for successful

entrepreneurship. Through this approach, a functional curriculum helps create a generation of tech-savvy entrepreneurs who can drive economic development and job creation in Nigeria.

Bridging the Global Digital Divide

Implementing a functional curriculum focused on technology also helps bridge the global digital divide, enabling Nigerian students to compete globally. Many developing countries lag in digital literacy and technological adoption, which can limit economic progress and create disparities in access to information and resources. By equipping students with technological skills, Nigeria can better integrate into the global digital economy and attract foreign investments in technology and innovation (Onwuka & Ogbonnaya, 2019).

As students develop technological skills through a functional curriculum, they gain the ability to participate in digital platforms, access global markets, and collaborate with international partners. This global integration is essential for Nigeria's economic development, as it opens up new opportunities in industries such as e-commerce, software development, and digital marketing. Moreover, as Nigeria's tech sector grows, students with these skills will be able to contribute to addressing the digital divide domestically by creating solutions that make technology more accessible to all Nigerians.

ROLE OF FUNCTIONAL CURRICULUM IN PROMOTING SELF-RELIANCE

Fostering Entrepreneurial Mindsets

One of the primary ways a functional curriculum promotes self-reliance is through the cultivation of entrepreneurial mindsets. Traditional curricula often focus on preparing students for white-collar jobs, which are increasingly scarce in Nigeria. However, a functional curriculum emphasizes entrepreneurship, encouraging students to think innovatively, identify gaps in the market, and develop businesses that provide goods or services (Adebayo & Adedoyin, 2016). Entrepreneurship training equips students with skills such as business planning, market analysis, financial literacy, and marketing, which are essential for starting and sustaining a business.

By fostering an entrepreneurial mindset, a functional curriculum encourages students to view self-employment as a viable career option. As young people become skilled in identifying business opportunities and managing enterprises, they can contribute to job creation and economic growth. In Nigeria, where the economy depends significantly on small and medium-sized enterprises (SMEs), entrepreneurship-driven self-reliance is essential for sustainable development (Ogundele & Olajide, 2017). Graduates who leave school with an entrepreneurial skillset are better prepared to enter the workforce independently, reducing their dependence on limited formal employment opportunities.

Developing Vocational and Technical Skills

Vocational and technical skills training is a key component of a functional curriculum that directly supports self-reliance. Unlike general academic education, vocational training equips students with skills that are immediately applicable in various trades and industries, such as carpentry, plumbing, mechanics, tailoring, and ICT. In Nigeria, where formal employment opportunities are limited, possessing these skills allows individuals to engage in income-

generating activities without waiting for government or corporate employment (Eze & Nwakobi, 2018).

Through hands-on experience and industry-based training, students gain practical expertise that can lead to direct employment or self-employment. For instance, technical training in fields like automotive repair, welding, or computer programming not only opens up job opportunities but also enables individuals to start small businesses in these areas. By providing students with practical skills relevant to their communities and the economy, a functional curriculum builds a foundation for economic independence. Furthermore, vocational education addresses the skills gap in Nigeria's workforce by preparing graduates who can contribute to local industries and reduce reliance on foreign expertise (Onwuka & Ifediora, 2020).

Cultivating Problem-Solving and Critical Thinking Skills

A functional curriculum also emphasizes problem-solving and critical thinking skills, which are essential for self-reliance. In a rapidly changing economy, individuals need to be able to adapt to new challenges, find innovative solutions to problems, and work autonomously. Traditional curricula often focus on rote memorization, which does not encourage students to think independently or tackle real-world issues. In contrast, a functional curriculum trains students to analyze situations critically, assess multiple options, and develop practical solutions to problems (Okoye & Obiechina, 2019).

For example, in agricultural education, students may learn to apply scientific knowledge to increase crop yields, conserve resources, or develop sustainable farming practices. This not only enhances their problem-solving skills but also enables them to apply these solutions to local agricultural challenges, potentially creating food security and income opportunities. Problem-solving skills enable individuals to handle the complexities of entrepreneurship and self-employment, as they are equipped to navigate challenges that arise in running a business. By developing a self-reliant mindset, individuals are empowered to address personal and community challenges proactively, reducing dependency on external assistance.

Preparing for Digital and Technological Self-Sufficiency

In today's digital age, self-reliance also involves the ability to use and adapt to new technologies. A functional curriculum that includes digital literacy and technological training prepares students for self-sufficiency in a technology-driven economy. Courses in ICT, coding, data management, and other digital skills enable students to access a wider range of economic opportunities, including freelance work, remote employment, and tech-based entrepreneurship (Adeyemi & Akinbola, 2020).

For instance, with skills in web development or digital marketing, individuals can offer their services to clients globally, thereby increasing their income potential. Additionally, technological literacy allows individuals to leverage digital tools for managing businesses, from bookkeeping and customer service to online sales and marketing. In Nigeria, where the digital economy is rapidly growing, possessing technological skills enhances self-reliance by enabling individuals to work independently and participate in the global economy. This digital self-sufficiency is especially valuable in rural areas, where traditional job opportunities may be scarce but digital platforms can provide alternative income sources.

Building Life Skills for Sustainable Livelihoods

Life skills such as financial literacy, communication, time management, and resource management are integral to a functional curriculum and are essential for self-reliance. Unlike academic knowledge, these skills directly influence an individual's ability to manage their finances, plan for the future, and navigate the challenges of self-employment (Okafor & Nwachukwu, 2018). Financial literacy, for example, empowers students to budget effectively, save, and invest, while resource management skills enable them to use resources efficiently, which is crucial for sustaining a business or livelihood.

Furthermore, communication skills allow individuals to negotiate, collaborate, and network, which are important for building client relationships and accessing markets. Time management and organizational skills help individuals work efficiently, ensuring they meet deadlines and fulfill commitments. These life skills are especially valuable for self-employed individuals, who must manage multiple aspects of their work independently. By incorporating life skills into the curriculum, a functional education fosters self-reliant individuals capable of sustaining livelihoods and contributing to their communities.

Reducing Youth Unemployment and Socioeconomic Dependency

The role of a functional curriculum in promoting self-reliance is especially critical in addressing Nigeria's high youth unemployment rate. By focusing on practical, employable skills, the curriculum reduces the number of unemployed youth who rely on government assistance or familial support. With self-sustaining skills, young people can enter the workforce with confidence and pursue independent careers, reducing socioeconomic dependency (Oladipo & Adebayo, 2019).

Self-reliance reduces the pressure on government resources and allows young people to contribute productively to the economy. By preparing students to create their own opportunities and sustain themselves financially, a functional curriculum contributes to a more resilient society that can withstand economic fluctuations. This emphasis on self-reliance is essential for Nigeria's economic stability, as it creates a population that is less vulnerable to unemployment and more capable of driving local and national development.

CONCLUSION

This study has explored the significance of a functional curriculum in driving technological development and fostering self-reliance in Nigeria. It is evident that for Nigeria to transition from its current economic challenges towards a more sustainable and diversified economy, the education system must align more closely with the demands of a technology-driven global economy. A functional curriculum that incorporates STEM education, vocational training, and entrepreneurship is essential in equipping students with the skills and knowledge needed to meet the evolving needs of the labor market.

Technological development is an important factor in economic growth and competitiveness, and a functional curriculum can serve as a critical pathway for Nigeria to harness the potential of its youth in this regard. By integrating modern technologies and emphasizing practical skills, the education system can help foster a new generation of innovators, entrepreneurs, and skilled professionals capable of addressing the country's

technological and economic challenges. Furthermore, the promotion of self-reliance through entrepreneurship education can empower individuals to create their own job opportunities, reducing reliance on the government for employment and contributing to the overall stability of the economy.

However, the successful implementation of a functional curriculum in Nigeria requires overcoming several challenges, including inadequate funding, a shortage of trained teachers, insufficient infrastructure, and resistance to change. To address these barriers, comprehensive policy reforms, increased investment in education, and strong industry partnerships are necessary. Moreover, there must be a shift in societal attitudes towards vocational and technical education, recognizing the immense value that practical, skills-based training can offer in preparing students for future challenges.

The integration of a functional curriculum is not just a theoretical ideal but a practical necessity for Nigeria's development. By equipping students with the skills for technological innovation and entrepreneurship, Nigeria can foster a more resilient economy, reduce unemployment, and promote national self-reliance. If the recommendations of this study are implemented, Nigeria has the potential to become a leader in technological development and innovation in Africa, paving the way for economic growth and prosperity in the 21st century.

Suggestions

- Government should allocate more resources to the education sector, focusing on infrastructure, teacher training, and the development of STEM and vocational education and enforce policies that encourage the integration of technology and entrepreneurship education across all levels of education.
- Educational Institutions should update the curriculum to emphasize STEM education, coding, robotics, and entrepreneurship training that aligns with market demands and promote vocational education: Offer more vocational and technical training programs to equip students with industry-specific skills.
- Teachers and Educators should participate in continuous training programs to stay updated with the latest technological advancements and teaching methods and adopt innovative teaching methods: Incorporate active learning strategies, project-based learning, and hands-on experiences to engage students and build practical skills..
- Private Sector (Industry and Businesses) should invest in educational programs, provide scholarships, internships, and sponsorships for students pursuing STEM and technical courses and collaborate with universities: Partner with universities and technical institutions to shape the curriculum based on the skills needed in the industry.
- Students should take advantage of extra-curricular activities, internships, and online courses to develop practical skills in technology and entrepreneurship.

ABSTRACT

This paper discussed school maintenance planning for effective administration of public secondary schools in Bayelsa State. School maintenance is a critical issue in Bayelsa State's public secondary schools. Poor funding, lack of planning, and limited resources have caused the deterioration of school infrastructure, resulting in damaged classrooms, sanitation facilities, and inadequate learning tools. This neglect negatively impacts student performance, health, and overall education quality. The main challenge is the absence of a comprehensive and sustainable maintenance plan, which worsens the state of many schools. School maintenance planning involves evaluating the condition of school facilities, prioritizing repairs, allocating resources for maintenance, and ensuring ongoing upkeep to meet the standards needed for effective teaching and learning. The paper was supported by the Systems Theory developed by Ludwig von Bertalanffy**,** which suggests that a school is a complex system with interconnected parts that work together to achieve common goals. It highlights the need for understanding how these parts interact, as changes in one area can impact the whole system, requiring coordinated management. The paper identified prospective school maintenance planning strategies for effective administration to include; regular infrastructure audits, adequate budgeting for maintenance, student involvement in maintenance, partnerships with local communities, staff training on maintenance best practices, maintenance management software, long-term maintenance plans, emergency maintenance protocols, sustainability practices in maintenance and community-based maintenance initiatives**.** It therefore concluded that effective school administration in Bayelsa State depends on strategic maintenance planning. Using proactive maintenance, administrators can improve the learning environment and boost academic performance. The paper therefore suggested that principal should ensure the regular conduct of infrastructure audits to assess the state of school facilities and identify areas needing attention.

Keywords: School Maintenance Planning, Effective Administration, Public Secondary Schools, Bayelsa State.

INTRODUCTION

In recent years, school maintenance has become a critical concern in the administration of public secondary schools in Bayelsa State. A well-maintained school environment directly influences the academic performance, health, and well-being of students and staff. However, inadequate funding, lack of planning, and insufficient resources have led to the deterioration of school infrastructure. This neglect has resulted in dilapidated classrooms, damaged sanitation facilities, and inadequate learning equipment, all of which have a detrimental effect on the overall quality of education (Osuji, 2023; Leigha, 2024).

The major challenge faced by school administrators in Bayelsa State is the lack of a comprehensive and sustainable school maintenance planning system. This is particularly evident in many public schools where infrastructural decay is a serious issue, negatively affecting the learning experience. Patrick (2018) stated that effective maintenance planning not only ensures the sustainability of school facilities but also fosters a conducive environment for learning and teaching. Therefore, without a proper maintenance strategy, the administrative efforts of school leaders are compromised, hindering the realization of educational goals. The consequences of poor school maintenance extend beyond the physical condition of the school buildings. When schools are not well-maintained, they often lack the basic amenities required for a safe and effective learning environment, such as reliable electricity, clean water, and functional restrooms. This can create health and safety hazards for both students and staff, and hinder their ability to focus and perform at their best (Agi, 2017). Moreover, the lack of a sustainable maintenance plan means that schools are forced to rely on temporary fixes or ad-hoc solutions, which only serve to address immediate concerns without tackling the root causes of infrastructural decline (Adeyinka, 2018). This paper aims to explore the role of school maintenance planning in the effective administration of public secondary schools in Bayelsa State.

THEORETICAL FRAMEWORK

The theory that supports this paper is the Systems Theory developed by Ludwig von Bertalanffy in 1968 cited in Leigha (2024). Systems Theory posits that an organization, such as a school, is a complex system made up of interrelated components that work together to achieve common goals. It emphasizes the importance of understanding how these components interact and influence one another. Changes in one part of the system can affect the whole, highlighting the need for a coordinated approach to management and problem-solving. Systems theory in school administration highlights the importance of integrating all components of the school system, including teaching staff, administration, students, and support services like maintenance, in a unified way. Each part of the system, whether it's the curriculum, extracurricular activities, or the physical infrastructure, must function cohesively to achieve the school's overall mission and goals.

In the context of maintenance, systems theory stresses the significance of having a proactive, well-coordinated approach to ensuring that facilities are maintained efficiently. Maintenance isn’t just about fixing broken equipment or addressing issues as they arise; it's about anticipating needs, creating preventative measures, and ensuring that all facilities and resources are available and operational for both students and staff (Igwe, 2022).

The relevance of systems theory to this paper is evident in the way it highlights the interconnectedness of different aspects of school management. For instance, school infrastructure, maintenance staff, budget allocation, and policy development must all work in harmony to ensure that maintenance activities are efficiently executed. Daramola and Agboola (2019) emphasized that adopting a systems approach allows administrators to view the school as a whole and implement maintenance strategies that address both immediate and long-term needs. Applying systems theory, Bayelsa State school administrators can better understand the interdependencies between school facilities, resources, and teaching outcomes, allowing them to create more effective and holistic maintenance plans. A systems approach also ensures that any maintenance strategy does not work in isolation but is integrated into the broader goals of the educational system (Ayogu et al., 2020). Aligning maintenance efforts with the school's educational objectives, a systems approach fosters a more holistic and sustainable approach to facility management.

School Maintenance Planning

School maintenance planning is an essential process in ensuring that educational facilities remain in optimal condition. Maintenance planning involves organizing, scheduling, and executing tasks that preserve and improve school infrastructure. In the context of public secondary schools in Bayelsa State, effective maintenance planning is crucial for sustaining a conducive learning environment. Okojie (2020) defined school maintenance planning as a comprehensive process that involves assessing the current state of school facilities, prioritizing the repair needs based on urgency and importance, allocating the necessary resources for maintenance activities, and ensuring that the facilities are consistently maintained to meet the educational standards required for effective teaching and learning. This definition highlights the importance of a structured and strategic approach to maintenance, emphasizing that regular assessment and resource allocation are critical to creating an environment that supports educational success.

Jackson (2018) viewed school maintenance planning as a proactive strategy aimed at preventing major breakdowns and disruptions in the learning environment. The definition described the approach as including regular inspections to identify potential issues before they become serious problems, as well as implementing preventive measures that reduce the likelihood of equipment failure or facility degradation. This proactive maintenance planning ensures that minor issues are addressed before they escalate into costly and disruptive repairs, which can significantly affect the day-to-day operations of the school. Through such a strategy, schools can maintain a consistent and safe learning environment for both students and staff. Mbah (2019) described school maintenance planning as a continuous, ongoing process that focuses on identifying potential issues early and addressing them before they disrupt the teaching and learning environment. This view emphasizes the importance of early intervention and ongoing vigilance in maintaining the physical infrastructure of the school. Further argued that by regularly monitoring the condition of school facilities, administrators can anticipate potential problems and take action to prevent them from becoming obstacles to the educational process. Thus, school maintenance planning is not a one-time event but a continuous cycle of assessment, action, and review.

Williams (2017) defined school maintenance planning as a structured, systematic approach to the management of school facilities, ensuring that all physical assets, including buildings, furniture, and equipment, are maintained in a way that supports effective teaching and

learning. This emphasized the importance of a strategic and organized process that covers all aspects of the school's physical environment. Ensuring that the facilities are properly maintained, the focus is placed on supporting the educational goals of the institution. This structured approach allows schools to maintain an environment that facilitates effective teaching while minimizing disruptions caused by poor infrastructure or malfunctioning equipment.

Adeniran (2021) characterized school maintenance planning as a dynamic strategy that incorporates both corrective and preventive maintenance strategies. This approach ensures the longevity of school infrastructure by addressing both immediate repairs (corrective maintenance) and future issues (preventive maintenance) to avoid unforeseen breakdowns. This highlights the need for a balance between reactive and proactive strategies in order to maintain the school's physical assets over time. Doing so, maintenance planning becomes a tool not only for addressing current problems but also for ensuring the continued functionality of the school's facilities, thus minimizing unplanned downtimes that could disrupt the learning environment. In the context of Bayelsa State, prospective school maintenance planning strategies are crucial for ensuring that educational facilities are well-maintained and conducive to effective teaching and learning. Given the unique challenges posed by the region's climate, infrastructure development, and resource allocation, the following strategies should be considered:

- Regular Infrastructure Audits: Regular infrastructure audits help administrators identify the condition of school facilities and prioritize repairs. This proactive approach ensures that maintenance needs are addressed before they escalate into costly repairs (Ige, 2017).
- Adequate Budgeting for Maintenance: Allocating a dedicated portion of the school's budget for maintenance is essential for ensuring that sufficient resources are available for ongoing and emergency repairs. Without proper budgeting, maintenance tasks can be delayed or neglected, compromising the quality of the learning environment (Akpan, 2018).
- Student Involvement in Maintenance: Engaging students in maintenance activities helps foster a sense of responsibility for their environment. Organized student clean-up programs and facility care activities can reduce the burden on staff and contribute to a positive school culture (Adeniran, 2021).
- Partnerships with Local Communities: Collaborating with local businesses and communities can provide additional resources for maintenance tasks. Schools can partner with local artisans, contractors, and businesses to reduce maintenance costs and enhance the sustainability of school facilities (Mbah, 2019).
- Staff Training on Maintenance Best Practices: Training school staff on the best practices for maintaining school facilities ensures that maintenance work is conducted efficiently and effectively. Staff should be equipped with the skills to perform minor repairs and report issues that require external intervention (Daramola & Agboola, 2019).
- Maintenance Management Software: Adopting software tools to track and manage maintenance tasks can streamline the maintenance process, ensuring that repairs are scheduled and completed on time. Maintenance management software helps create a record of completed tasks and future maintenance needs (Okojie, 2020).
- Long-Term Maintenance Plans: Developing a long-term maintenance plan ensures that schools can anticipate future maintenance needs and allocate resources accordingly. This forward-thinking strategy helps prevent infrastructure failure due to neglect and ensures sustainable development (Bassey, 2017).

- Emergency Maintenance Protocols: Developing emergency protocols for unforeseen breakdowns ensures that maintenance issues are resolved quickly and with minimal disruption to school activities. These protocols should outline the steps for identifying, reporting, and addressing urgent issues (Clement, 2017).
- Sustainability Practices in Maintenance: Adopting environmentally friendly maintenance practices, such as using sustainable materials and energy-efficient systems, can reduce operational costs and promote environmental stewardship (Harrison, 2020).
- Community-Based Maintenance Initiatives: Schools can involve the local community in maintenance activities, such as fundraising for infrastructure projects, contributing labor, or donating materials. This fosters a sense of ownership and strengthens the relationship between the school and its community (Fred, 2018).

Effective Administration

Effective administration refers to the efficient management of resources, personnel, and processes to achieve the goals of an organization. In the context of public secondary schools, effective administration ensures that the institution runs smoothly, with adequate support for teaching, learning, and community engagement. Johnson (2017) defined effective administration as the ability to allocate resources efficiently, make informed decisions, and achieve organizational objectives through the coordinated efforts of all stakeholders. Johnson's definition underscores the importance of not just managing resources but ensuring that these resources whether human, financial, or material are allocated in a way that maximizes their impact on the organization's goals. According to Johnson effective administration requires a deep understanding of the institution's needs and a strategic approach to fulfilling those needs by aligning resources with those needs. This approach goes beyond merely managing day-to-day operations; it involves careful planning and coordination among various stakeholders such as teachers, staff, students, parents, and the broader community to ensure that the institution operates smoothly and achieves its objectives.

Clever (2020) described effective administration as leadership that ensures accountability, transparency, and optimal resource utilization in the pursuit of educational goals. The definition emphasized the role of leadership in fostering an environment where everyone is held accountable for their actions, and decisions are made with a high level of transparency. In an educational context, effective administration is not just about making decisions but ensuring that those decisions are clear, justified, and in line with the institution's mission. Prioritizing accountability, the administration can build trust among stakeholders, leading to greater collaboration and support. Transparency, in turn, allows for a more open flow of communication, ensuring that everyone involved in the school community understands the rationale behind decisions and feels involved in the process. Bassey (2017) viewed effective administration as the ability of school leaders to manage both academic and administrative functions while maintaining a positive school climate. Bassey further stressed the dual responsibility of school leaders to handle both the academic and non-academic aspects of the school. This includes overseeing the curriculum, teaching quality, student outcomes, as well as administrative functions such as staff management, budgeting, and facilities maintenance. Effective administration, in this sense, is about balancing these responsibilities while ensuring that the school environment remains supportive and conducive to learning. Maintaining a positive school

climate is particularly important, as it directly impacts student morale, staff motivation, and overall school performance.

Anderson (2020) characterized effective administration as involving strategic planning, decision-making, and managing resources to meet both immediate and long-term educational objectives. This emphasized the importance of foresight and long-term vision in administration. While addressing the immediate needs of the school is important, effective administration requires school leaders to plan for the future and ensure that the school is prepared to meet evolving educational challenges. Patrick (2019) suggested that effective administration is characterized by clear communication, well-defined roles, and systematic processes that facilitate the achievement of institutional goals. Effective administration in public secondary schools is inseparable from sound maintenance planning. A well-maintained school environment enhances the ability of administrators to focus on their core responsibilities managing resources, facilitating learning, and promoting academic success.

PROSPECTIVE SCHOOL MAINTENANCE PLANNING STRATEGIES FOR EFFECTIVE ADMINISTRATION OF PUBLIC SECONDARY SCHOOLS

Regular Infrastructure Audits and Effective Administration

Regular infrastructure audits are essential for assessing the condition of school buildings, facilities, and other physical resources. Such audits allow administrators to identify potential hazards, weaknesses, and areas that require immediate or future repairs. Conducting regular audits can prevent costly emergency repairs by addressing issues early before they escalate into more significant problems. Alhassan et al. (2021) emphasized that continuous inspections are crucial for identifying deteriorating infrastructure, ensuring that repair and replacement schedules are established proactively. In addition to helping schools manage repair costs, Regular audits can also ensure that safety standards are consistently met, a critical concern in educational environments where the well-being of students and staff is paramount. Huang and Zhang (2017) demonstrated that consistent audits not only detect physical damage to school buildings but also evaluate whether the infrastructure meets the evolving needs of the student population. These audits enable administrators to better plan for the replacement or upgrading of outdated facilities to align with contemporary educational standards.

Regular infrastructure audits play a critical role in maintaining the integrity and longevity of assets. Turner et al. (2020) highlights the importance of these audits in establishing long-term asset management plans that prioritize infrastructure resilience and sustainability. This approach, while requiring an initial investment, saves costs in the long run by preventing major infrastructure breakdowns. Regular audits also serve as a tool for setting priorities when it comes to resource allocation. Luecke and Rogers (2018) revealed that schools with systematic auditing procedures are able to allocate their limited resources more effectively, focusing on the most critical areas first. This approach ensures that essential repairs and upgrades are addressed promptly, preventing larger issues from arising. Furthermore, audits provide administrators with reliable data to advocate for government funding or external grants, as they can demonstrate the condition of school infrastructure and the need for financial support. Pradip et al. (2022) found that regular infrastructure audits help prevent buildings from being declared unsafe by identifying and addressing issues early. This proactive approach reduces the risk of accidents,

ensuring that the facilities remain safe for both students and staff. As a result, the learning environment is enhanced, fostering a safer and more productive space for education.

For Bayelsa State, regular infrastructure audits will be invaluable in ensuring that school facilities are safe and conducive for learning. Given the state's challenges with inadequate infrastructure and financial limitations, regular audits will provide a strategic approach to prioritize essential repairs and maintenance, ensuring that the available resources are utilized efficiently and effectively.

Adequate Budgeting for Maintenance and Effective Administration

Adequate budgeting is essential for the successful maintenance of school infrastructure. Effective budgeting allows administrators to plan and allocate resources for both preventive and corrective maintenance. Adequate maintenance budgeting can help schools avoid the common pitfall of addressing maintenance needs reactively, which often leads to higher costs and disruptions in the learning environment. Dube et al. (2020) stressed the importance of budgeting in ensuring that school maintenance is not neglected, as insufficient funds allocated to maintenance can result in deteriorating facilities that undermine educational quality. A well-structured maintenance budget allows schools to establish a proactive approach to infrastructure upkeep, reducing the likelihood of sudden, expensive repairs.

Johnson and White (2019) argued that schools that prioritize maintenance in their budgets tend to experience fewer breakdowns, as regular preventive maintenance is carried out before issues worsen. The study also emphasizes the importance of allocating resources for both long-term infrastructure improvements and short-term repairs, ensuring that the school’s physical environment is continuously maintained. Another key aspect of effective budgeting is the ability to balance competing financial demands. Dawood and Naseer (2018) emphasized that schools with clear, itemized maintenance budgets are better equipped to make informed financial decisions. Having a detailed breakdown of expenses, schools can prioritize urgent repairs while also planning for long-term improvements. This approach ensures that financial resources are used efficiently to maintain and enhance the school infrastructure over time.

One of the significant challenges to effective budgeting is ensuring that the funds allocated to maintenance are spent wisely and transparently. Smith and Crawford (2021) highlighted that schools in resource-constrained areas often struggle with financial mismanagement, leading to inefficient use of allocated funds. Transparent budgeting processes, including involvement from the wider school community in decision-making, can improve accountability and ensure that maintenance budgets are used for their intended purposes. Furthermore, a well-organized budgeting system is crucial for schools seeking external support. Thomas et al. (2022) shows that when schools have a structured approach to budgeting, they are better able to attract external funding, as donors and government bodies are more likely to invest in schools with clear financial plans. This structured approach enhances the school’s credibility and makes it easier to secure the resources needed for infrastructure and educational improvements.

For schools in Bayelsa State, adequate budgeting is critical given the region's financial limitations. Budgeting for maintenance in a way that ensures both short-term needs and long-term sustainability will require careful planning and strategic decision-making. If school management teams can secure adequate resources for maintenance, they will be in a better

position to ensure that school infrastructure remains functional and safe for students and staff alike.

Student Involvement in Maintenance and Effective Administration

Engaging students in school maintenance activities has become an increasingly popular strategy in improving school infrastructure while simultaneously fostering a sense of responsibility and ownership. Student involvement in maintaining the school environment can range from participation in cleaning activities to assisting in minor repairs and upkeeping facilities such as gardens and playgrounds. Involving students in maintenance not only helps ease the burden on school staff but also cultivates a culture of respect for the school infrastructure. Richards et al. (2021) revealed that when students actively participate in the maintenance of their school environment, it leads to increased pride in the school and a greater commitment to preserving the facilities. This, in turn, reduces vandalism and neglect. Student involvement provides students with valuable life skills. Miller and Carlson (2019) demonstrated that students who are involved in maintenance activities gain practical skills that contribute to their personal and academic development, including teamwork, problem-solving, and leadership.

Furthermore, engaging students in maintenance activities creates an opportunity for them to learn about the importance of sustainability and environmental conservation. Okojie and Akinmoladun (2020) found that students who participate in school maintenance activities are more likely to engage in sustainable practices beyond the school setting. This hands-on involvement helps instill a sense of responsibility and environmental awareness that can extend into their personal lives and future careers. Involving students in school maintenance activities also empowers them to become active agents of change within their school community. Stone et al. (2022) asserted that student involvement helps create a collaborative and inclusive atmosphere where students are empowered to take responsibility for the spaces they inhabit. This involvement also helps bridge the gap between students and teachers, as both groups work together to maintain the school environment.

In regions like Bayelsa State, where resources are limited, involving students in maintaining their school facilities can serve as an efficient way to manage upkeep while simultaneously teaching students valuable skills and encouraging active participation in the school's welfare.

Partnerships with Local Communities and Effective Administration

Partnerships with local communities are an essential component of sustainable school maintenance. Community involvement in school maintenance initiatives allows schools to tap into additional resources, both human and material, which can help reduce the burden of maintenance costs. Local communities, including parents, businesses, and local government authorities, can provide invaluable support in the form of donations, volunteer labor, and technical expertise. Carter et al. (2020) demonstrated that schools that build strong relationships with local communities tend to have more access to resources, such as financial support, volunteer help, and partnerships with local businesses. These connections can be leveraged to maintain and upgrade school infrastructure, as community members are often more willing to contribute to the well-being of their local schools. This collaborative approach enhances the sustainability and effectiveness of infrastructure improvements over time. Furthermore,

community involvement fosters a sense of shared responsibility for the school, which can strengthen the bond between the school and the wider community.

Desai and Choudhury (2021) suggested that when local communities participate in school maintenance activities, it leads to increased accountability and collaboration. Working together, community members help ensure that schools are well-maintained and that resources are used effectively. This involvement also fosters a sense of pride in the local educational institution, as the community takes an active role in its upkeep. Local businesses can play a crucial role in supporting schools, especially in terms of infrastructure maintenance. Haddad and Hassan (2018) indicated that local businesses, in particular, can contribute significantly to school maintenance by providing materials, equipment, and financial support for projects like building renovations and playground construction. Their involvement not only helps improve school facilities but also strengthens ties between the school and the community.

Community involvement in school maintenance fosters a sense of shared responsibility, which can greatly improve the overall condition of school facilities. Morris and Lee (2022) found that communities that actively engage in school maintenance create a network of shared responsibility, reducing instances of neglect and ensuring better overall facility upkeep. This research emphasizes that when local stakeholders are involved, they are more likely to advocate for resources and work towards maintaining and improving educational infrastructure. Building strong partnerships with local communities can significantly enhance the sustainability of school maintenance. Cheng et al. (2019) showed that schools that foster partnerships with local communities experience more sustainable maintenance efforts, as these collaborations help mitigate financial constraints by pooling local resources.

Community involvement, according to this study, results in long-term investments that benefit not only the school but also the broader community, creating an environment of mutual respect and cooperation. Building strong partnerships with local stakeholders is crucial for addressing infrastructure challenges in educational environments. Zhang and Xu (2020) highlighted that successful partnerships with local stakeholders can lead to improvements in school facilities, as local businesses are more willing to contribute when they see the direct impact of their involvement on the educational environment. This study emphasized the role of local communities in addressing infrastructure challenges, ensuring that maintenance projects are sustainable and ongoing.

In Bayelsa State, where schools often face financial constraints, local partnerships can be an effective strategy for ensuring the sustainability of school infrastructure. Building strong relationships with the surrounding communities, schools can access additional resources and support, which will help maintain school buildings and facilities. Engaging the community in the upkeep of school infrastructure will also help create a more vibrant school culture that emphasizes collective responsibility.

Staff Training on Maintenance Best Practices and Effective Administration

Staff training on maintenance best practices is an integral aspect of effective school maintenance planning. Properly trained maintenance staff are essential for ensuring that maintenance activities are carried out efficiently, safely, and in compliance with established standards. Staff training can range from basic repair techniques to advanced training on preventive maintenance, asset management, and safety protocols. Oliver et al. (2019) highlighted that schools with well-trained maintenance staff experience fewer disruptions due to infrastructure failures, as staff are

equipped to handle routine maintenance tasks and address emerging issues before they become critical.

Furthermore, well-trained staff are more likely to use resources efficiently, reducing waste and minimizing the need for costly repairs. Freeman and Jones (2021) noted that effective training programs help maintenance staff stay up-to-date with the latest techniques, tools, and technologies in the field of school maintenance. As a result, they are able to perform tasks more effectively, leading to a longer lifespan for school facilities. Staff training also helps to improve overall safety, as maintenance staff are trained to follow protocols that minimize the risk of accidents during maintenance work. Investing in staff development is essential for improving the overall functioning of schools. Patel and Kaur (2020) highlighted the significant benefits of investing in comprehensive staff training programs within schools. Equipping staff with the necessary skills and knowledge, schools can improve their overall performance, particularly in managing maintenance tasks. Effective training ensures that staff are better prepared to handle maintenance issues, reducing potential disruptions and creating a safer environment for both students and staff. As a result, schools become more productive and can provide an environment conducive to learning and growth.

A proactive approach to safety and maintenance can significantly reduce risks and costs in schools. Thompson and Clark (2022) explained that staff who are trained to recognize potential hazards early can address them quickly, preventing small issues from escalating into costly repairs or safety threats. Acting early, the school avoids larger, more expensive repairs and ensures that the facility remains safe for students and staff. This approach ultimately improves the overall safety of the school's environment, creating a more secure and functional space for learning. Focusing on energy efficiency can help schools reduce their long-term operational costs. Williams et al. (2021) found that training staff on energy-efficient maintenance practices significantly reduces operational costs, as maintenance staff can implement energy-saving measures such as proper insulation, energy-efficient lighting systems, and the correct usage of heating, ventilation, and air conditioning (HVAC) systems. Such initiatives contribute to the school’s long-term sustainability, ensuring that resources are used optimally and cost-effectively. Continuous professional development is essential for maintaining high standards in school infrastructure management. Clinton (2020) suggested that staff who receive ongoing professional development are more likely to engage in innovative maintenance practices, which can further extend the longevity of school infrastructure and reduce the frequency of expensive emergency repairs. Investing in staff training, schools can create a more capable, efficient, and safety-conscious maintenance workforce, contributing to the overall success of school maintenance planning.

For Bayelsa State, investing in training programs for maintenance staff will be crucial for improving the overall condition of public secondary schools. With the right training, maintenance staff will be better equipped to handle the complex maintenance tasks that arise in schools, allowing the administration to make the most of limited resources and extend the life of school infrastructure.

Maintenance Management Software and Effective Administration

In an age where technology is increasingly influencing every sector, schools must look to modern tools and software to streamline their maintenance processes. Maintenance Management Software (MMS) has proven to be an invaluable tool in efficiently tracking, scheduling, and

managing maintenance tasks. MMS automates and centralizes the management of school facilities, helping administrators to streamline operations and ensure that tasks such as repairs, inspections, and preventive maintenance are carried out on time and within budget. Turner (2022) stated that schools that implemented MMS reported a significant improvement in tracking maintenance tasks, reducing delays, and enhancing overall organizational efficiency. MMS helps school administrators create maintenance schedules, assign tasks to the right personnel, and track the completion of various maintenance activities. The integration of such software allows for data-driven decision-making, enabling school managers to identify patterns and make informed choices about maintenance needs.

Kiran and Patel (2021) highlighted that schools that implemented MMS could analyze historical maintenance data to identify trends and anticipate when repairs or upgrades would be necessary. Using this data-driven approach, schools could plan maintenance activities more efficiently, avoid unplanned downtime, and reduce the likelihood of emergency repairs. This predictive maintenance approach not only saves time but also reduces costs by allowing schools to address issues before they become larger, more expensive problems. The use of MMS also reduces human error, ensuring that important tasks are not overlooked or delayed. Gupta et al. (2019) stressed that MMS improve communication by providing a platform where maintenance staff can easily share updates on ongoing tasks, track progress, and report issues in real-time. This seamless communication ensures that everyone involved in the maintenance process is informed and aligned, leading to more efficient task completion and quicker response times. As a result, MMS help improve collaboration, streamline operations, and ensure that maintenance activities are completed effectively and on time.

Another key advantage of MMS is that it aids in the effective management of school resources. Singh et al. (2020) found that schools using MMS were able to allocate resources more effectively by tracking and managing maintenance tasks in a centralized system. This allowed schools to avoid redundant spending on unnecessary repairs or duplicate tasks. Optimizing resource allocation, MMS not only reduces wasteful expenses but also ensures that maintenance work is done with the right materials, tools, and personnel, eventually improving the overall quality of maintenance and extending the lifespan of the school's infrastructure. An organized approach to maintenance is essential for ensuring that school operations run smoothly without interruptions.

Johnson (2021) emphasized that the implementation of a Maintenance Management System (MMS) plays a pivotal role in achieving this by streamlining the maintenance process. MMS allows schools to efficiently schedule, track, and prioritize maintenance tasks, ensuring that they are addressed promptly and systematically. This level of organization helps minimize downtime and disruptions caused by poorly managed or delayed maintenance. Effective coordination between staff and maintenance teams is key to optimizing productivity. Armed (2020) demonstrated that the use of a Maintenance Management System (MMS) plays a crucial role in improving this coordination. With MMS, administrators and maintenance teams can work together more effectively by having a centralized platform to communicate, assign tasks, and track progress. MMS allows for better prioritization of maintenance tasks, ensuring that the most urgent issues are addressed first while less critical tasks are scheduled appropriately. It also helps in allocating resources more efficiently, so tasks are completed on time and within budget. Improving communication and providing real-time updates on task status, MMS reduces the chances of delays or errors that might arise from miscommunication or disorganization.

For schools in Bayelsa State, where financial resources may be constrained, implementing MMS could help ensure that the available resources are optimized and used efficiently to maintain school infrastructure.

Long-Term Maintenance Plans and Effective Administration

One of the most critical components of effective school maintenance is the development of long-term maintenance plans. These plans allow schools to anticipate future maintenance needs and allocate resources in a structured and sustainable way. Long-term maintenance planning helps schools avoid reactive repairs, which tend to be more costly and disruptive. Akintoye and Beck (2019) argued that having a long-term maintenance plan in place allows school administrators to focus on both preventative maintenance and major renovations, ensuring that the physical infrastructure of the school remains in good condition over time. A well-structured long-term maintenance plan involves regular assessments of the school's infrastructure to identify areas that may need attention in the near future.

Park et al. (2021) stated that this proactive approach reduces the likelihood of unexpected breakdowns and costly emergency repairs, leading to significant savings over time. Such planning also enables schools to schedule renovations and upgrades based on the needs of the facility, ensuring that these tasks are prioritized according to the available budget and the condition of the building. Long-term planning also allows for improved budgeting, as schools can forecast future maintenance costs and allocate funds accordingly. Effective planning plays a crucial role in the management of school facilities. Owen and Davies (2020) highlighted that schools with well-developed long-term plans are more likely to have better-managed facilities. This is because these plans consider not only the current condition of the infrastructure but also the future needs of students and staff, allowing schools to proactively address potential challenges and ensure the sustainability and adaptability of their facilities.

Long-term maintenance plans play a crucial role in optimizing facility management. Carter (2022) highlighted that by developing long-term maintenance strategies, schools can better organize and plan their maintenance activities in a way that aligns with their overall goals. This approach ensures that resources are used efficiently, and the facility remains in good condition over time. It also helps to prevent reactive, last-minute repairs by addressing maintenance needs in a proactive, strategic manner, eventually improving the overall management of the school's facilities.

Furthermore, long-term maintenance plans are essential for proactive facility management. Roberts et al. (2020) emphasized that having a long-term maintenance plan allows schools to carefully evaluate their infrastructure needs, enabling them to prioritize maintenance tasks and make decisions based on data rather than urgency. This approach helps avoid unnecessary repairs or costly upgrades and ensures the school's facilities continue to function efficiently over time, ultimately extending the life of the building and reducing costs. For Bayelsa State, where resource allocation can be challenging, the adoption of long-term maintenance plans is an effective way to ensure that infrastructure remains functional, even in the face of limited resources.

Emergency Maintenance Protocols and Effective Administration

While long-term maintenance planning is essential for proactive management, schools must also be prepared for unexpected maintenance emergencies. Emergencies, such as unexpected infrastructure failures, natural disasters, or accidents, can disrupt the learning environment and pose safety risks to students and staff. Emergency maintenance protocols are designed to ensure that schools are prepared for such events and can respond quickly and effectively when needed. Smith et al. (2018) highlighted the importance of having clear, well-communicated emergency maintenance protocols in place, as this allows schools to minimize downtime and ensure the safety of all stakeholders.

Emergency maintenance protocols typically include procedures for identifying and reporting issues, guidelines for prioritizing repairs, and a list of emergency contacts and resources. Justice (2019) emphasized that schools with established emergency maintenance protocols are better equipped to handle unexpected events and minimize disruptions to daily operations. These protocols also include the development of contingency plans that ensure students and staff are safe in case of infrastructure breakdowns or accidents. For example, protocols might include procedures for evacuations in the event of building collapses or flooding. Lewis (2021) found that schools that have regularly practiced emergency drills and simulations of maintenance emergencies tend to respond more effectively when real incidents occur, reducing panic and confusion among staff and students. Emergency Maintenance Protocols play a crucial role in ensuring swift action during unforeseen events.

Walker et al. (2020) underscored the fact that having an emergency response system in place ensures that maintenance staff are prepared to act swiftly and efficiently, reducing the risk of long-term damage and safety hazards. This preparation is particularly critical in schools, where rapid response can be the difference between a minor disruption and a more severe crisis. Effective Emergency Maintenance Protocols also involve collaboration with external resources. Carter (2021) found that emergency protocols that involve clear communication with local emergency services and include staff training for dealing with hazardous situations significantly enhance a school's ability to respond to emergencies effectively. A key component of Emergency Maintenance Protocols is ensuring the availability of essential backup systems. Simons (2022) emphasized the need for schools to have well-maintained backup systems, such as generators or emergency water supplies, to mitigate the effects of an emergency. This ensures that even in the event of infrastructure failures, schools can continue to function, protecting the wellbeing of students and staff while maintaining educational activities.

Bayelsa State, being prone to environmental factors such as flooding, would particularly benefit from emergency maintenance protocols that are tailored to address local conditions. Having a rapid response mechanism in place will not only protect students and staff but also help reduce the economic impact of unexpected repairs.

Sustainability Practices in Maintenance and Effective Administration

Sustainability in maintenance practices is becoming an increasingly important consideration for schools around the world. Sustainability practices aim to reduce the environmental impact of maintenance activities while promoting the long-term well-being of the school and its surrounding environment. Schools that adopt sustainable maintenance practices focus on reducing waste, using eco-friendly materials, and ensuring that their infrastructure is energy-

efficient and environmentally responsible. Jones and Hirst (2020) indicated that schools that integrate sustainability into their maintenance strategies see long-term cost savings through energy-efficient building designs, reduced utility bills, and a smaller environmental footprint. One aspect of sustainability in school maintenance is the use of green building materials, which have minimal environmental impact while still ensuring the longevity of school infrastructure. Sustainability Practices in Maintenance are crucial for long-term cost efficiency.

Pande and Singh (2018) found that schools that use sustainable materials in repairs and renovations reduce the need for frequent replacements, which lowers overall maintenance costs. This approach not only benefits the budget but also contributes to environmental sustainability. Sustainable practices such as energy-efficient lighting and heating systems, as well as the installation of water-saving technologies, help reduce operational costs in the long term. Ferguson and Mitchell (2022) found that schools that invest in renewable energy sources, such as solar panels or wind turbines, significantly decrease their reliance on external energy sources, further decreasing their carbon footprint and utility costs. This shift to renewable energy also supports long-term sustainability goals for the institution.

Schools that adopt sustainability-focused maintenance strategies also contribute positively to the local environment. Allen and Moss (2021) found that environmentally responsible schools enjoy improved community relationships, as local residents appreciate the commitment to sustainability. This positive perception can foster stronger community support, collaboration, and a sense of pride in the school's efforts to protect the environment. Moreover, sustainability Practices in Maintenance also extend to improving the surrounding environment. Robertson (2019) found that schools with green initiatives, such as planting trees, creating outdoor learning spaces, and managing rainwater, have a more positive effect on the ecosystem, promoting biodiversity and fostering environmental stewardship among students. This approach not only enhances the school's sustainability but also educates students on the importance of environmental responsibility. Furthermore, sustainability Practices in Maintenance have the added benefit of improving the overall well-being of the school community. Tan (2020) highlighted that sustainable school maintenance practices increase the overall health and well-being of students and staff, as cleaner and greener environments promote better air quality, reduce waste, and provide a more pleasant and engaging atmosphere for learning. These strategies ensure that schools not only benefit financially from reduced operational costs but also create a more sustainable future for the entire community.

For Bayelsa State, where environmental challenges such as flooding and poor waste management are pressing issues, adopting sustainability practices in maintenance could address both infrastructural and environmental challenges. Schools that focus on sustainability can also serve as models for students, teaching them the importance of environmental stewardship.

Community-Based Maintenance Initiatives and Effective Administration

One of the most effective ways to ensure the sustainability of school infrastructure is through community-based maintenance initiatives. These initiatives encourage the active involvement of the local community in maintaining the school's physical facilities, including through volunteer labor, material donations, and financial contributions. Community-based initiatives help reduce the financial burden on schools, especially in regions with limited resources. Ahmed et al. (2019) found that schools with strong community partnerships benefit from increased support in the form of both human and material resources, which can be used to address ongoing maintenance

needs. This collaborative approach not only enhances the school's capacity to maintain facilities but also strengthens community ties and fosters a shared sense of responsibility for the school's success.

Community-Based Maintenance Initiatives play a crucial role in fostering a sense of shared responsibility for school upkeep. Karim and Rahman (2020) show that when communities become actively involved in the maintenance of public facilities such as schools, they gain a sense of ownership and responsibility, leading to better care and preservation of school infrastructure. These community-driven initiatives may include local businesses providing materials for repairs, parents volunteering to help with cleaning and minor repairs, and local organizations supporting larger renovation projects. Furthermore, such initiatives help create stronger ties between the school and its surrounding community, fostering a culture of collaboration and shared responsibility for local education. Williams (2021) stressed that schools that engage their communities in maintenance efforts report higher levels of satisfaction and pride among staff and students, creating a more supportive and positive school environment.

Community-Based Maintenance Initiatives often bring unique insights and solutions tailored to local needs. Fredrick et al. (2022) indicate that community-based maintenance programs often lead to innovative solutions for addressing infrastructure needs. Local community members, being familiar with the unique challenges and needs of the school, are often able to offer creative and cost-effective solutions that might not be apparent to external contractors or administrators. This approach not only contributes to the sustainability of school infrastructure but also strengthens the social fabric of the community, as it encourages collaboration between local businesses, government bodies, and residents.

Moreover, community-Based Maintenance Initiatives foster long-term relationships between schools and their local communities. Scott (2020) highlights that schools involved in community-based maintenance programs are more likely to receive long-term support from local stakeholders, who view their investment in the school as an investment in the future of the community. This enduring support helps ensure the ongoing success and sustainability of school facilities. For Bayelsa State, the challenges of maintaining public secondary schools amidst limited funding and resources are significant. However, adopting community-based maintenance initiatives could provide a viable solution to these challenges. Involving local communities in the upkeep of school facilities can reduce financial pressures while fostering a stronger connection between schools and the surrounding communities. This strategy can ensure that the maintenance of school infrastructure becomes a shared responsibility, promoting sustainability, reducing costs, and enhancing the overall educational environment for students and staff.

CONCLUSION

The effective administration of public secondary schools in Bayelsa State is heavily reliant on strategic maintenance planning. Adopting proactive maintenance strategies, administrators can improve the quality of the learning environment, which in turn enhances academic outcomes. A well-maintained school environment promotes better focus, health, and overall well-being for students, contributing to more positive educational experiences. Addressing infrastructure challenges through comprehensive maintenance plans will not only prolong the lifespan of school facilities but also contribute to the sustainability of the educational system in Bayelsa State, ensuring that resources are used efficiently and that schools remain functional for years to come.

Suggestions

Effective school maintenance requires collaboration and shared responsibility from all stakeholders involved. To ensure the long-term success and sustainability of school facilities, each individual or group must play a vital role in maintaining and improving the infrastructure. Below are some key suggestions:

- Principal should ensure the regular conduct of infrastructure audits to assess the state of school facilities and identify areas needing attention.
- School maintenance officer should develop and manage the school's maintenance budget to ensure funds are appropriately allocated for repairs.
- Teachers should actively participate in maintaining school facilities through monitoring and reporting infrastructural issues.
- Local community leaders should partner with schools to mobilize resources and provide necessary support for maintenance efforts.
- School administrator should provide training programs for staff to ensure they are capable of conducting basic maintenance tasks.
- Technology officer should implement and maintain maintenance management software to improve the efficiency of task tracking.
- Government should support long-term planning for infrastructure development in public schools.
- The PTA should engage in fundraising activities to provide additional resources for school maintenance.
- Students should participate in school maintenance projects to foster responsibility and care for the environment.
- The school board should advocate for the inclusion of sustainability measures in school maintenance strategies.

EFFECTIVE ADMINISTRATION IN NIGERIAN PUBLIC SECONDARY SCHOOLS: IDENTIFYING THE KEY CHALLENGES FACING PRINCIPALS

Ndidi Ugbome OSUYA
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

Effective administration is pivotal to the success of public secondary schools in Nigeria, yet principals face numerous challenges that hinder optimal performance. This study explores the key administrative obstacles confronting school principals and proposes actionable solutions to enhance educational leadership. The research identifies critical challenges such as inadequate funding, poor infrastructure, insufficient teacher motivation, bureaucratic bottlenecks, and weak community engagement. These issues collectively undermine administrative efficiency, leading to declining academic standards and student outcomes. The study holds that many principals lack adequate training in modern management techniques, limiting their ability to implement innovative solutions and that political interference and inconsistent government policies further exacerbate administrative difficulties. Despite these hurdles, some schools demonstrate resilience through effective resource mobilization, stakeholder collaboration, and strong leadership practices. To address these challenges, the study suggests targeted interventions, including enhanced professional development for principals, increased budgetary allocations, decentralization of administrative processes, and stronger partnerships with local communities. Furthermore, adopting technology-driven management tools and fostering a culture of accountability can significantly improve school governance. This research contributes to the discourse on educational leadership in developing nations, offering practical insights for policymakers and school administrators.

Keywords: School Administration, Nigerian Education, Principal Challenges, Public Secondary Schools, Funding Gaps, Teacher Motivation, Political Interference, Student Discipline, Educational Policy, Community Involvement.

INTRODUCTION

Education remains a fundamental driver of national development, and effective school administration is crucial in shaping the quality of learning outcomes. In Nigeria, public secondary schools serve as critical institutions for youth development, yet they face persistent administrative challenges that hinder their potential. Principals, as the chief administrators, play a pivotal role in ensuring smooth school operations, yet they grapple with systemic obstacles that impede their effectiveness. The Nigerian educational system has undergone several reforms,

including the Universal Basic Education (UBE) program and various policy adjustments, yet administrative inefficiencies persist, affecting teaching quality, student performance, and overall institutional growth (Adeyemi, 2020).

One of the foremost challenges facing principals in Nigerian public secondary schools is inadequate funding. Despite government allocations, many schools suffer from financial constraints, leading to poor infrastructure, insufficient instructional materials, and delayed staff salaries (Ofoegbu et al., 2013). This financial strain forces principals to operate under severe limitations, often relying on community contributions or personal initiatives to address basic needs. The lack of sufficient funds also affects maintenance of school facilities, with many institutions struggling with dilapidated classrooms, inadequate laboratories, and poor sanitation (Ajayi & Adegbesan, 2018). These conditions create an unconducive learning environment, further complicating administrative responsibilities.

Another critical issue is bureaucratic inefficiency within the education sector. Principals often face excessive red tape in decision-making processes, particularly in staff recruitment, procurement, and disciplinary actions. Centralized control by state education boards restricts principals' autonomy, limiting their ability to implement timely and context-specific solutions (Onyeike & Onyeike, 2021). Additionally, political interference in school administration undermines merit-based decisions, as appointments and resource allocations are sometimes influenced by external pressures rather than institutional needs (Okorie & Eze, 2023). This politicization erodes administrative effectiveness and fosters discontent among staff and students. Teacher-related challenges further compound the difficulties faced by principals. Issues such as absenteeism, low motivation, and inadequate professional development hinder instructional quality. Many teachers in public schools lack regular training opportunities, leaving them ill-equipped to adapt to modern pedagogical approaches (Adegboye et al., 2021). Principals, burdened with managing unmotivated staff, often struggle to enforce discipline and maintain high teaching standards. Furthermore, frequent strikes by teacher unions disrupt academic calendars, exacerbating learning gaps and administrative instability (Omodan, 2023).

Community and parental disengagement also pose significant administrative hurdles. In many cases, parents show minimal involvement in school activities, leaving principals with little external support in enforcing discipline and improving student performance (Uchechi & Okorie, 2020). This lack of collaboration weakens accountability mechanisms, as schools operate in isolation from the communities they serve. Additionally, societal challenges such as poverty, child labor, and early marriages indirectly affect school administration by contributing to low enrollment and high dropout rates (Nwankwo & Okafor, 2022). Technological deficiencies further hinder effective administration. Many Nigerian public secondary schools lack access to digital tools for record-keeping, communication, and teaching, forcing principals to rely on outdated manual processes (Eze et al., 2023). The absence of modern management systems slows administrative efficiency, making it difficult to track student performance, staff attendance, and resource utilization effectively. While some schools have begun integrating technology, the digital divide remains a persistent barrier, particularly in rural areas (Adelabu & Makinde, 2024).

In spite of the challenges, some schools have demonstrated resilience through innovative leadership approaches. Principals who adopt participatory management styles, foster stakeholder engagement, and leverage limited resources creatively often achieve better outcomes (Omoregie & Iyamu, 2021). However, these successes are sporadic rather than systemic, highlighting the need for structured interventions to strengthen school administration nationwide. Addressing these challenges requires a multi-faceted approach, including policy reforms, enhanced funding

mechanisms, capacity-building for principals, and stronger community-school partnerships. Without systemic improvements, the administrative burdens on principals will continue to undermine the quality of secondary education in Nigeria. This study seeks to explore these challenges in depth, offering evidence-based recommendations to enhance administrative effectiveness and, by extension, improve educational standards in Nigerian public secondary schools.

METHODOLOGY

This paper adopts a qualitative research approach to explore the key challenges facing principals in the effective administration of Nigerian public secondary schools. Data was gathered through a comprehensive review of existing literature, including scholarly articles, government reports, and educational policy documents, to identify recurring administrative issues. Also, insights were drawn from interviews and anecdotal evidence shared by experienced school principals and education stakeholders, providing real-world perspectives on the obstacles they encounter. The study focuses on factors such as inadequate funding, poor infrastructure, teacher shortages, political interference, and excessive bureaucratic bottlenecks, which hinder effective school management. The analysis also considers the impact of socio-economic conditions on school administration, highlighting disparities between urban and rural institutions. The paper presents a holistic understanding of the systemic and operational challenges principals face. The methodology emphasizes critical evaluation rather than statistical analysis, aiming to provide a nuanced discussion that informs policy recommendations. The limitations of the study include reliance on secondary data and the potential bias of anecdotal accounts, but the triangulation of sources enhances the validity of the conclusions. Ultimately, this approach offers a foundation for addressing administrative inefficiencies in Nigerian public secondary schools.

CONCEPTUAL UNDERPINNING

The Concept of Effective Administration in Organizational Management

Figure 1: School Administration Model. Source: Office of School Administration (2018).

Effective administration is a fundamental aspect of organizational success, ensuring that resources, personnel, and processes are managed efficiently to achieve desired goals. It encompasses strategic planning, decision-making, coordination, and supervision to optimize

productivity and maintain institutional stability. In both public and private sectors, effective administration is critical for fostering growth, innovation, and sustainability (Adeyemo & Ogunyemi, 2020). The concept applies across various fields, including education, healthcare, business, and governance, where structured leadership and systematic processes determine overall performance. At its core, effective administration involves the ability to align institutional objectives with available resources while maintaining accountability and transparency. According to Ogunu (2019), administrative effectiveness is measured by how well leaders can mobilize human and material resources to meet organizational targets. This requires a combination of managerial skills, including communication, problem-solving, delegation, and conflict resolution. In educational institutions, for instance, principals must balance academic standards, staff welfare, and infrastructural needs while adhering to government policies (Omodan, 2023). Similarly, in corporate settings, administrators must ensure operational efficiency, employee satisfaction, and financial sustainability (Adegboye et al., 2021).

One key element of effective administration is leadership competence. Leaders must possess the ability to inspire, guide, and make informed decisions that benefit the organization. Eze et al. (2023) highlighted that transformational leadership; where administrators encourage innovation and collective problem-solving, enhances institutional performance more than autocratic approaches. Additionally, adaptive leadership is crucial in dynamic environments, allowing administrators to respond to challenges such as technological changes, economic fluctuations, and workforce diversity (Adelabu & Makinde, 2024). Without strong leadership, organizations risk inefficiency, low morale, and stagnation. Another critical factor is efficient resource management. Administrators must ensure that financial, human, and material resources are allocated judiciously to prevent wastage and maximize output. In many developing nations, including Nigeria, poor resource management has been identified as a major hindrance to institutional growth (Ofoegbu et al., 2013). For example, in public schools, misallocation of funds often leads to inadequate facilities, unpaid salaries, and poor learning conditions (Ajayi & Adegbesan, 2018). Effective administrators must therefore implement robust financial controls, prioritize needs, and explore alternative funding sources to sustain operations.

Communication and stakeholder engagement also play a pivotal role in administrative effectiveness. Open channels of communication between leaders, employees, and external partners foster collaboration and trust. Studies indicate that organizations with participatory management styles experience higher productivity and employee satisfaction (Omoregie & Iyamu, 2021). In schools, involving teachers, parents, and students in decision-making processes enhances accountability and collective responsibility (Uchechi & Okorie, 2020). Conversely, poor communication leads to misunderstandings, resistance to change, and operational inefficiencies. Technological integration is another dimension of modern administration. Digital tools such as management information systems (MIS), data analytics, and e-governance platforms streamline processes, reduce paperwork, and enhance decision-making accuracy (Eze et al., 2023). However, many institutions, particularly in developing regions, struggle with technological adoption due to limited infrastructure, funding, and technical expertise (Adelabu & Makinde, 2024). Effective administrators must advocate for digital transformation while providing training to ensure smooth transitions.

Effective administration requires continuous evaluation and improvement. Regular performance assessments, feedback mechanisms, and policy reviews help institutions identify weaknesses and implement corrective measures (Okorie & Eze, 2023). Without periodic evaluations, inefficiencies may go unnoticed, leading to systemic failures. Benchmarking against

best practices and adapting to global trends also ensures long-term relevance and competitiveness (Nwankwo & Okafor, 2022).

Nigerian Public Secondary Schools: Structure, Challenges, and Prospects

Nigerian public secondary schools serve as critical institutions in the nation's educational system, catering to adolescents between the ages of 10 and 18. These schools operate under the supervision of state governments, with some federal government-owned unity schools existing as elite institutions (Adeyemi, 2020). The typical Nigerian public secondary school follows a 6-3-3-4 system, comprising six years of secondary education divided into junior (3 years) and senior (3 years) sections, preparing students for either tertiary education or vocational pursuits (Federal Ministry of Education, 2014). These institutions are mandated to provide quality education that develops students' cognitive, affective, and psychomotor skills, as outlined in the National Policy on Education (NPE). However, the reality often falls short of these expectations due to systemic challenges that have persisted for decades.

The infrastructure in many public secondary schools presents a concerning picture, with numerous institutions lacking basic facilities such as functional laboratories, libraries, and adequate classroom spaces (Ajayi & Adegbesan, 2018). A study conducted across five states revealed that 63% of public secondary schools had insufficient furniture, forcing students to sit on floors during lessons (Ofoegbu et al., 2013). The situation is particularly dire in rural areas where schools often operate without electricity, potable water, or proper sanitation facilities (Nwankwo & Okafor, 2022). These physical deficiencies create an unconducive learning environment that negatively impacts both teaching and learning processes. The shortage of qualified teachers compounds these challenges, with critical subjects like mathematics, sciences, and English often taught by unqualified or underqualified personnel (Adegboye et al., 2021).

Administrative challenges further hinder the effectiveness of public secondary schools. Principals frequently grapple with bureaucratic bottlenecks, inadequate funding, and political interference in school management (Okorie & Eze, 2023). The centralized nature of educational administration in many states limits school autonomy, making it difficult for principals to address institution-specific needs promptly (Onyeike & Onyeike, 2021). Teacher management presents another significant hurdle, with issues ranging from frequent strikes by teacher unions to poor staff motivation and absenteeism (Omodan, 2023). These administrative weaknesses contribute to the declining quality of education, as evidenced by poor performance in national examinations like the West African Senior School Certificate Examination (WASSCE), where less than 50% of candidates obtain credits in five subjects including English and Mathematics (WAEC, 2023).

The student population in public secondary schools faces numerous challenges that affect learning outcomes. Overcrowded classrooms are common, with pupil-teacher ratios often exceeding 50:1 in urban schools (Eze et al., 2023). Many students come from economically disadvantaged backgrounds, leading to issues such as inability to pay levies, poor nutrition, and engagement in child labor (Uchechi & Okorie, 2020). The curriculum implementation also faces criticism for being overly theoretical and not adequately preparing students for practical life skills or the job market (Adelabu & Makinde, 2024). Furthermore, societal problems like cultism, bullying, and teenage pregnancy have become prevalent in many public secondary schools, creating additional challenges for school administrators (Nwankwo & Okafor, 2022).

The Concept of School Principal: Leadership and Management in Education

Figure 2: Dimensions of principal leadership. Source: Lijuan, Hallinger & James (2016).

The school principal occupies a pivotal position in the educational system, serving as both an instructional leader and administrative manager of a school. As the chief executive of the school, the principal's role encompasses a wide range of responsibilities that directly impact teaching quality, student achievement, and overall school effectiveness (Adeyemi & Akinfolarin, 2017). Modern educational research conceptualizes the principal as more than just a building administrator, but rather as the key change agent, who sets the academic tone, develops staff capacity, and creates a conducive learning environment (Leithwood et al., 2020). The effectiveness of a principal is often measured by their ability to balance managerial duties with instructional leadership while navigating complex relationships with teachers, students, parents, and education authorities. Principals perform multiple roles that require diverse competencies in leadership, communication, decision-making, and conflict resolution.

According to Hallinger's (2018) instructional leadership model, effective principals focus on three key dimensions: defining the school's mission, managing the instructional program, and promoting a positive school learning climate. In the Nigerian context, principals must additionally contend with challenges such as inadequate funding, infrastructure deficits, and bureaucratic constraints while striving to improve academic standards (Omodan, 2023). Principals, who successfully implement shared leadership approaches, where teachers participate in decision-making processes, tend to achieve better school outcomes than those who adopt authoritarian styles (Omoregie & Iyamu, 2021). This participatory approach fosters teacher commitment and creates a sense of collective responsibility for school improvement.

The instructional leadership role of principals has gained increasing importance in contemporary education systems. Effective principals regularly monitor teaching and learning processes, provide constructive feedback to teachers, and ensure alignment between curriculum objectives and classroom practices (Adegboye et al., 2021). They organize professional development programs to enhance teacher competencies and promote the use of evidence-based teaching strategies (Eze et al., 2023). In Nigerian public secondary schools, principals face the additional challenge of managing large classes with limited resources while ensuring curriculum coverage and quality instruction (Okorie & Eze, 2023).

Successful principals in these conditions demonstrate creativity in resource mobilization and utilization, often going beyond official channels to secure necessary materials for teaching

and learning. School climate and culture represent another critical area of principal influence. Principals shape the school's values, norms, and behavioral expectations through their daily interactions and policy decisions (Nwankwo & Okafor, 2022). A positive school climate characterized by safety, respect, and high expectations correlates strongly with improved student achievement and teacher satisfaction (Uchechi & Okorie, 2020). Principals must also manage relationships with various stakeholders including parents, community leaders, and education authorities. In many Nigerian communities, principals serve as bridges between the school and local populations, addressing concerns about student discipline, academic performance, and school-community collaboration (Adelabu & Makinde, 2024). This community engagement role has become increasingly important as schools seek local support to supplement government resources.

Professional development for principals remains an area needing attention in many educational systems. While teachers receive regular training, principals often assume leadership roles with minimal preparation for the administrative and instructional demands of their position (Onyeike & Onyeike, 2021). Effective principal preparation programs should combine theoretical knowledge with practical experiences, covering areas such as educational law, financial management, instructional supervision, and change leadership (Leithwood et al., 2020). Mentoring programs that pair new principals with experienced colleagues have shown promise in supporting leadership development and reducing turnover rates (Adegboye et al., 2021). As education systems evolve, the principal's role continues to expand, requiring ongoing learning and adaptation to new challenges and expectations.

KEY CHALLENGES FACING PRINCIPALS

Principals in secondary schools are faced with different challenges; some of them are explained:

Inadequate Funding and Poor Infrastructure

School principals across Nigeria grapple with the persistent twin challenges of inadequate funding and poor infrastructure, which significantly hinder their ability to provide quality education. These systemic issues create a ripple effect that impacts every aspect of school administration, from teacher morale to student performance. The financial constraints facing public secondary schools stem from insufficient government allocations, delayed disbursements, and inefficient utilization of available resources (Adeyemi, 2020). Many principals find themselves managing schools with budgets that barely cover basic operational costs, leaving little room for improvements in teaching quality or facility maintenance. This chronic underfunding forces school administrators to make difficult choices between competing priorities, often resulting in compromised educational standards (Ofoegbu et al., 2013).

The infrastructure deficit in Nigerian secondary schools presents a visible manifestation of funding challenges, with many institutions lacking basic amenities necessary for effective teaching and learning. A study by Ajayi and Adegbesan (2018) revealed that approximately 60% of public secondary schools in Nigeria operate with inadequate classroom spaces, forcing students to learn in overcrowded or dilapidated environments. Science laboratories, where they exist, often lack essential equipment, making practical lessons nearly impossible in many schools (Nwankwo & Okafor, 2022). The absence of functional libraries, ICT centers, and proper sanitation facilities further compounds the problem, creating learning environments that fail to

meet minimum standards for quality education. Principals in these circumstances must constantly devise temporary solutions to keep schools running while advocating for long-term infrastructure improvements (Okorie & Eze, 2023).

These resource constraints directly affect teaching and learning outcomes in multiple ways. Teachers struggle to deliver effective lessons without necessary instructional materials, while students face distractions and discomfort in substandard learning environments (Adegboye et al., 2021). The lack of adequate facilities particularly disadvantages students in science, technology, and vocational subjects that require specialized equipment and spaces (Eze et al., 2023). Principals report spending considerable time and energy seeking alternative funding sources through community partnerships or personal initiatives, diverting attention from their core educational leadership responsibilities (Omoregie & Iyamu, 2021).

The psychological toll on both administrators and teachers working in such challenging conditions contributes to low morale and high turnover rates in the profession (Omodan, 2023). The impact of inadequate infrastructure extends beyond academics to affect student health and safety. Many schools lack proper sanitation facilities, clean water sources, and adequate ventilation, creating environments conducive to disease transmission (Uchechi & Okorie, 2020). Security concerns also arise from poorly maintained school perimeters and buildings, leaving students vulnerable to external threats (Adelabu & Makinde, 2024). Principals must navigate these challenges while maintaining an environment that supports learning, often with limited support from education authorities. The cumulative effect of these infrastructure deficiencies contributes to declining enrollment in public schools as parents seek better-resourced alternatives for their children (Onyeike & Onyeike, 2021).

Poor Staff Motivation and Shortage of Qualified Teachers

The chronic shortage of qualified teachers, particularly in STEM subjects and rural areas, creates persistent staffing gaps that principals struggle to fill (Adeyemi & Akinfolarin, 2022). Compounding this problem is the widespread issue of poor teacher motivation, stemming from inadequate remuneration, delayed salary payments, and poor working conditions (Ofoegbu, 2014). These twin challenges force principals to devote excessive time to workforce management rather than instructional leadership, ultimately compromising student learning outcomes. The teacher shortage crisis has reached alarming proportions, with UNESCO (2023) reporting a national deficit of over 300,000 qualified secondary school teachers, particularly acute in mathematics, sciences, and technical subjects.

Teacher demotivation manifests in various ways that undermine school effectiveness, including high absenteeism, low commitment, and resistance to professional development initiatives (Adegboye et al., 2021). Many teachers in public schools face frustrating working conditions - oversized classes averaging 50-70 students, lack of teaching materials, and dilapidated infrastructure, which erode their enthusiasm (Nwankwo & Okafor, 2023). Principals report spending considerable time addressing staff grievances and mediating conflicts rather than focusing on pedagogical improvement (Okorie & Eze, 2024). The salary structure for teachers remains uncompetitive compared to other professions requiring similar qualifications, making retention difficult, especially for early-career teachers who often leave for better-paying jobs (World Bank, 2023). This constant turnover forces principals to repeatedly train new staff, disrupting continuity in teaching and learning.

The qualification gap presents another layer of complexity for school administrators. Many teachers currently in classrooms lack proper certification or subject-matter expertise, particularly in critical areas like physics, chemistry, and mathematics (Federal Ministry of Education, 2022). Principals often must assign teachers to subjects outside their specialization to cover staffing gaps, resulting in suboptimal instruction (Ajayi & Adegbesan, 2019). Rural schools bear the brunt of this crisis, as qualified teachers frequently transfer to urban areas when opportunities arise, leaving principals in remote locations with chronic staffing deficits (Uchechi & Okorie, 2021). The situation has forced some principals to employ unqualified temporary teachers or rely heavily on National Youth Service Corps (NYSC) members to fill vacancies, creating inconsistency in teaching quality (Omodan, 2023).

Professional development opportunities, when available, often fail to address teachers' real classroom challenges or occur too infrequently to make meaningful impact (Omoregie & Iyamu, 2022). Principals attempting to implement school-based teacher development programs face resistance from demoralized staff who view such initiatives as additional burdens rather than career-enhancing opportunities (Eze et al., 2023). The lack of clear career progression pathways further diminishes motivation, as many teachers see limited opportunities for advancement regardless of performance (Adelabu & Makinde, 2024). This stagnation contributes to the brain drain of talented educators leaving the profession for other sectors or migrating abroad where their skills are better compensated and appreciated (Onyeike & Onyeike, 2021).

Overpopulation and Large Class Sizes

The crisis of classroom overcrowding has become one of the most visible challenges confronting school principals across Nigeria's public secondary education system. With class sizes frequently exceeding 70 students in urban schools and sometimes reaching 100 in particularly affected areas, principals grapple with the educational and administrative consequences of this persistent issue (Federal Ministry of Education, 2023). This overpopulation stems from multiple factors including rapid urbanization, population growth, insufficient school infrastructure development, and parental preference for particular schools (Adeyemi & Akinfolarin, 2022). The resulting large class sizes create a cascade of problems that affect teaching quality, student learning, and overall school management, placing enormous pressure on principals to maintain educational standards under increasingly difficult conditions. Research indicates that the average pupil-teacher ratio in Nigerian public secondary schools stands at 45:1, nearly double the recommended UNESCO standard of 25:1 (World Bank, 2023), creating an environment where personalized attention becomes nearly impossible and classroom management challenges multiply exponentially.

The instructional challenges created by overcrowded classrooms significantly compromise educational quality. Teachers in these environments struggle to implement effective pedagogical strategies, as learner-centered approaches become impractical with such high student numbers (Omodan, 2023). Principal’s report declining academic performance in overcrowded classes, particularly in subjects requiring practical demonstrations or individual feedback like mathematics and sciences (Ajayi & Adegbesan, 2021). Classroom management becomes increasingly difficult, with teachers spending disproportionate time on discipline rather than instruction, leading to frustration and burnout among staff (Nwankwo & Okafor, 2024). The physical environment of overcrowded classrooms are often hot, poorly ventilated, and with

insufficient furniture further inhibits learning, with students sometimes sitting on windowsills or sharing desks (Uchechi & Okorie, 2022).

Principals face the impossible task of allocating limited classroom space while maintaining some semblance of conducive learning environments, often resorting to double shift systems that reduce instructional time for all students (Omoregie & Iyamu, 2023). From an administrative perspective, large class sizes create logistical nightmares that consume principals' time and energy. Record-keeping becomes more complex, with principals managing enormous student populations that strain existing data systems (Adelabu & Makinde, 2024). The increased student numbers also exacerbate existing shortages of textbooks and learning materials, as available resources must be shared among more learners (Ofoegbu, 2015). Safety concerns multiply in overcrowded schools, with principals struggling to maintain order during assemblies, breaks, and emergencies (Okorie & Eze, 2024). Perhaps most critically, the personal connection between school leadership and students diminishes as principals cannot possibly know or effectively monitor hundreds or thousands of pupils, weakening the school's ability to identify and address individual student needs (Adegboye et al., 2022). This depersonalization of education contributes to increased dropout rates and declining student engagement, particularly among struggling learners who become lost in the crowd (UNESCO, 2024).

The solutions to this multifaceted problem require coordinated action at multiple levels. Some principals have implemented innovative approaches such as peer-learning systems, technology-enhanced instruction, and creative classroom partitioning to mitigate the challenges (Eze et al., 2023). However, lasting solutions demand policy interventions including accelerated school construction, stricter enforcement of enrollment caps, and equitable distribution of students across available schools (Federal Ministry of Education, 2023). Teacher deployment strategies must account for student population densities, and school infrastructure development needs to keep pace with demographic trends (World Bank, 2023). Until these systemic changes occur, principals will continue struggling with the daily realities of overcrowded schools, where both teaching quality and learning outcomes remain compromised by sheer numbers. The educational cost of this overcrowding crisis measured in diminished student achievement, teacher frustration, and administrative strain represents one of the most urgent challenges facing Nigeria's secondary education system today.

Political Interference and Corruption

School principals in Nigeria's public education system operate within a complex web of political interference and systemic corruption that significantly undermines their ability to administer schools effectively. These twin challenges manifest in various forms, from inappropriate appointments and politically-motivated transfers to misappropriation of school funds and procurement irregularities (Adeyemi & Akinfolarin, 2023). Political office holders frequently interfere in school management decisions, often pressuring principals to admit unqualified students, employ politically-connected but unqualified staff, or divert school resources for political purposes (Omodan, 2024).

This environment of external manipulation creates an impossible working situation for principals who must balance educational objectives with political realities, often at the expense of school quality and integrity. The prevalence of these practices has become so normalized that many principals develop survival strategies rather than resistance mechanisms, perpetuating a cycle of dysfunction in school administration (World Bank, 2023). Corruption in school

management takes both overt and subtle forms that principals must constantly navigate. A 2023 Transparency International report on Nigerian education revealed that approximately 68% of school funds are vulnerable to diversion, with common practices including inflation of contracts, ghost workers on payrolls, and kickbacks for school supplies (Transparency International, 2023).

Principals face pressure to participate in these corrupt networks or risk being transferred to less desirable locations or denied necessary resources for their schools (Ajayi & Adegbesan, 2022). The procurement process for school infrastructure projects presents particular vulnerabilities, with contractors frequently selected based on political connections rather than competence, resulting in substandard buildings and facilities that require constant repairs (Federal Ministry of Education, 2024). These corrupt practices directly impact educational quality as funds meant for textbooks, laboratory equipment, and teacher training regularly disappear into private pockets, leaving schools under-resourced and students disadvantaged (Omoregie & Iyamu, 2023).

The teacher recruitment and promotion system represents another arena where political interference and corruption converge to undermine school effectiveness. Qualified teachers frequently lose positions to less-qualified candidates with political connections, forcing principals to manage understaffed departments or unqualified instructors (Nwankwo & Okafor, 2024). Promotion decisions often reflect patronage networks rather than merit, demoralizing competent teachers and eroding professional standards (Uchechi & Okorie, 2023). Principal's attempting to enforce performance standards or resist these corrupt practices risk retaliation through sudden transfers, false allegations, or withholding of school resources (Okorie & Eze, 2025). This systemic corruption creates an environment where educational leadership becomes more about navigating political minefields than improving learning outcomes, with many competent principals either conforming to survive or leaving the system altogether (Adegboye et al., 2023).

The consequences of political interference and corruption extend beyond financial losses to fundamentally distort educational priorities and outcomes. Schools in politically-favored areas receive disproportionate resources while others languish in neglect, exacerbating educational inequalities (UNESCO, 2024). Principals spend valuable time managing political relationships rather than focusing on instructional leadership, curriculum development, or student welfare (Ofoegbu, 2016). Perhaps most damaging is the lesson these practices teach students about how society operates, normalizing corruption and undermining efforts to instill ethical values (Adelabu & Makinde, 2025). The cumulative effect creates a system where educational advancement depends more on connections than competence, with devastating long-term consequences for national development (Eze et al., 2024).

Weak Parental and Community Involvement

The persistent lack of meaningful parental and community engagement presents a significant obstacle for principals striving to improve educational outcomes in Nigerian secondary schools. Research indicates that only 29% of parents in public schools actively participate in school activities beyond paying mandatory fees, creating a substantial disconnect between home and school environments (Adegboye et al., 2021). This weak involvement stems from multiple factors including socioeconomic pressures that force parents to prioritize economic survival over school engagement, cultural perceptions that view education as solely the school's responsibility and in some cases, parents' own limited education which creates discomfort in engaging with

school authorities (Omodan, 2023). Principals find themselves struggling to bridge this gap, recognizing that student success requires collaboration between schools, families, and communities, yet lacking effective mechanisms to foster such partnerships. The consequences manifest in poor student discipline, low academic performance, and high dropout rates, particularly among students from disadvantaged backgrounds where the engagement gap is most pronounced (Nwankwo & Okafor, 2022).

The nature of parental disengagement varies across Nigeria's diverse socioeconomic landscape. In urban areas, the challenge often involves working parents who have limited time for school visits or meetings, relying instead on occasional phone communication with teachers (Adelabu & Makinde, 2024). Rural communities present different but equally complex challenges, where subsistence farming cycles and traditional gender roles frequently prevent consistent parental participation in school affairs (Uchechi & Okorie, 2021). Many principals report that Parent-Teacher Association (PTA) meetings, when they occur, attract less than 20% of parents, with those attending typically being mothers while fathers remain conspicuously absent (Federal Ministry of Education, 2023). This gendered dimension of parental involvement reflects deep-seated cultural norms that assign educational responsibilities primarily to women while limiting fathers' engagement to financial contributions when they can afford them (Omoregie & Iyamu, 2022). The result is a fractured support system where principals must compensate for absent parents while simultaneously trying to engage them more effectively.

Community disengagement compounds these challenges, leaving schools isolated rather than integrated into local support networks. Traditional community structures that once actively supported education have weakened in many areas, replaced by a growing perception that schools are government institutions requiring no local oversight or contribution (Adeyemi & Akinfolarin, 2023). Principals attempting to mobilize community resources for school improvement often face apathy or resistance, particularly in regions where past mismanagement of community contributions has eroded trust (Okorie & Eze, 2024). The lack of community ownership manifests in vandalism of school property, trespassing on school grounds, and minimal protection of school interests during local conflicts - issues that principals must address without adequate community-backed authority (Eze et al., 2023). This isolation becomes particularly damaging in crisis situations, where schools without strong community ties find themselves vulnerable to security threats and unable to mobilize local support during emergencies (World Bank, 2023).

The impact of weak engagement extends to student behavior and academic performance. Without consistent parental reinforcement of school expectations at home, principals and teachers bear the full burden of instilling discipline and academic values (Ajayi & Adegbesan, 2021). Students navigating the disconnect between school and home environments often develop behavioral problems or disengage from learning, recognizing the lack of coordinated expectations (Ofoegbu, 2018). Academically, the absence of home support for learning translates to poor completion of assignments, irregular attendance, and limited educational aspirations - all issues that principals must address through school-based interventions that would be more effective with family reinforcement (UNESCO, 2024). The cumulative effect creates schools that operate in isolation rather than partnership, forcing principals to stretch limited resources to compensate for missing family and community supports.

Breaking this cycle requires innovative approaches that recognize and address the barriers to engagement. Some principals have successfully implemented flexible meeting schedules, home visitation programs, and community liaison strategies to improve participation

(Omodan, 2023). Technology offers promising solutions, with some schools using SMS platforms and social media to maintain consistent communication with working parents (Adelabu & Makinde, 2024). However, sustainable solutions require systemic changes including community sensitization programs that reposition schools as shared community assets rather than government outposts, and parent education initiatives that build capacity for meaningful engagement (Federal Ministry of Education, 2023). Until these gaps are bridged, principals will continue struggling against the limitations imposed by weak parental and community involvement, striving to educate students without the essential ecosystem of support that research shows makes all the difference in educational outcomes.

Insecurity and Student Indiscipline

Principals of Nigerian secondary schools currently grapple with escalating security threats and worsening student indiscipline that collectively undermine the learning environment. The security landscape has deteriorated significantly since 2015, with schools facing kidnapping threats, cult-related violence, and communal conflicts that spill into educational institutions (Adegboye et al., 2021). This dangerous environment coexists with growing behavioral problems among students, including drug abuse, bullying, vandalism, and defiance of school authorities - creating a crisis situation that demands constant vigilance from school administrators (Omodan, 2022). The intersection of external security threats and internal discipline problems presents a complex management challenge for principals who must simultaneously protect students from harm while maintaining order and academic focus. Data from the Federal Ministry of Education (2022) reveals that over 60% of public secondary school principals consider security management their most pressing concern, surpassing even resource allocation challenges that traditionally dominated administrative priorities.

School security threats have evolved beyond conventional safety concerns to include targeted attacks by criminal elements seeking ransom payments or ideological objectives. The 2021 mass abduction of students in Kankara, Katsina State marked a dangerous escalation that forced principals nationwide to reevaluate security protocols (Ajayi & Adegbesan, 2022). Many schools now operate under constant threat, with principals improvising security measures like local vigilante partnerships, perimeter fencing projects, and emergency evacuation drills while awaiting promised government security interventions (Nwankwo & Okafor, 2023). Rural schools prove particularly vulnerable due to their isolation and limited security infrastructure, creating an educational disparity where students in remote areas face greater physical risks (Uchechi & Okorie, 2021). The psychological impact of this insecurity manifests in student anxiety, teacher reluctance to accept rural postings, and parental hesitation to send children to school - all issues that principals must address while maintaining academic operations (World Bank, 2022).

Student indiscipline compounds these security challenges, creating internal management crises that divert attention from teaching and learning. Modern disciplinary problems reflect broader societal issues, with principals reporting increased cases of substance abuse, cyberbullying, sexual misconduct, and outright defiance of school rules (Ofoegbu, 2019). The traditional authority of school administrators has eroded, with some students challenging punishments through parent interventions or even legal actions, leaving principals uncertain about appropriate disciplinary boundaries (Okorie & Eze, 2023). Classroom management has become increasingly difficult as teachers struggle with disruptive behaviors that range from chronic lateness to physical aggression, often without adequate administrative support due to

concerns about legal repercussions or parental backlash (Federal Ministry of Education, 2022). The proliferation of social media exacerbates these issues, enabling the rapid spread of harmful behaviors and making disciplinary incidents more visible to the broader community (Adelabu & Makinde, 2023).

The convergence of external security threats and internal discipline problems creates a uniquely challenging environment for school leadership. Principals must balance the need for strict security protocols with the educational benefits of an open, nurturing school climate (Adeyemi & Akinfolarin, 2022). Excessive security measures can create prison-like environments that stifle learning, while lax approaches risk catastrophic security failures - leaving principals navigating an impossible middle ground (Eze et al., 2023). Similarly, disciplinary approaches must avoid both the harsh corporal punishment of past eras and the permissive environments that enable behavioral crises, requiring nuanced strategies that many principals feel ill-equipped to develop (Omoregie & Iyamu, 2022). The emotional toll on principals managing these dual challenges contributes to high stress levels and early retirements among school administrators, further destabilizing the education system (UNESCO, 2023).

PROPOSED SOLUTIONS

The following are strategies on how to proffer solutions to the plethora of challenges principals face in carrying out their administrative duties:

Increased Government Funding and Public-Private Partnerships (PPPs)

Increased government funding remains the most sustainable solution, as current budgetary allocations to education fall below the UNESCO-recommended 15-20% of national budgets, standing at just 7.4% in 2023 (Federal Ministry of Education, 2023). Enhanced funding would enable principals to improve infrastructure, acquire modern teaching resources, and implement staff development programs critical for quality education. Research shows that schools with adequate government support achieve better academic outcomes, as principals can focus on instructional leadership rather than constant resource improvisation (Adeyemi & Akinfolarin, 2022). Targeted funding should prioritize laboratory equipment, ICT integration, and facility maintenance - areas most lacking in public schools according to the 2022 National School Infrastructure Audit (World Bank, 2022). When governments increase and timely disburse education budgets, principals gain capacity to implement strategic improvements rather than merely managing crises.

Public-Private Partnerships (PPPs) offer complementary solutions by leveraging private sector resources and expertise to augment government efforts. Successful PPP models in Nigerian education include adoption programs where corporations renovate schools, provide learning materials, and train teachers in exchange for corporate social responsibility benefits (Omodan, 2023). The EdoBEST program demonstrates how technology partnerships can revolutionize teaching methods and school management through digital tools and teacher tablets (Adelabu & Makinde, 2023). Principals benefit from PPPs through infrastructure upgrades, teacher capacity building, and access to modern educational technologies that would otherwise be unaffordable (Ajayi & Adegbesan, 2021).

Effective PPPs require transparent agreements protecting public education interests while offering private partners reasonable incentives (Omoregie & Iyamu, 2022). When properly

structured, these collaborations provide principals with resources to address administrative challenges while introducing private sector efficiency into school operations. Combining increased government funding with strategic PPPs creates optimal conditions for effective school administration. Governments must fulfill their funding responsibilities while creating enabling environments for private sector participation (UNESCO, 2023). Principals need training to manage PPP projects and allocated funds effectively, ensuring resources directly benefit teaching and learning (Nwankwo & Okafor, 2023). With balanced implementation, these solutions can transform Nigerian public secondary schools into well-administered institutions capable of delivering quality education.

Improved Teacher Welfare and Training

The chronic challenges facing principals in Nigerian public secondary schools demand urgent attention to teacher welfare and professional development as key solutions. Research indicates that motivated, well-trained teachers significantly reduce administrative burdens on principals while improving learning outcomes (Adegboye et al., 2021). Teacher welfare improvements must begin with competitive remuneration packages that reflect the profession's importance, including timely salary payments, housing allowances, and performance-based incentives (Federal Ministry of Education, 2022). The current exodus of qualified teachers to foreign schools and other professions stems largely from poor working conditions and remuneration that fail to meet basic living standards (Omodan, 2023). Principals report spending excessive time resolving staff grievances related to unpaid salaries and poor working conditions - time that should be devoted to instructional leadership and school improvement (Ajayi & Adegbesan, 2021). Comprehensive welfare packages should include health insurance, reduced class sizes, and improved school facilities to create conducive teaching environments that boost morale and retention (World Bank, 2022).

Targeted professional development programs equally serve as powerful tools for principals to enhance school effectiveness. Regular, needs-based training in modern pedagogies, classroom management, and subject-specific methodologies transforms teachers into more competent educators requiring less administrative supervision (Adelabu & Makinde, 2023). The EdoBEST program demonstrates how structured teacher training combined with ongoing coaching can dramatically improve teaching quality and student performance (Omoregie & Iyamu, 2022). Principals benefit from establishing school-based professional learning communities where teachers collaboratively solve instructional challenges and share best practices (Nwankwo & Okafor, 2023). Digital training platforms offer cost-effective solutions for reaching teachers in remote locations, providing access to current educational resources and methodologies (UNESCO, 2023). When teachers receive quality training, principals spend less time addressing classroom crises and more time leading school-wide improvement initiatives.

Investing in teacher welfare and development creates a virtuous cycle that elevates entire school systems. Satisfied, competent teachers require less disciplinary intervention, implement curriculum more effectively, and contribute positively to school culture (Adeyemi & Akinfolarin, 2022). Principals leading schools with strong teacher support systems report higher job satisfaction and lower stress levels, as their role shifts from crisis management to educational leadership (Okorie & Eze, 2023). Sustainable solutions require government commitment to teacher welfare policies combined with school-level professional development systems managed by empowered principals.

Decentralization of School Management

The decentralization of school management presents a transformative solution to the administrative challenges facing principals in Nigerian public secondary schools. Current centralized systems create bureaucratic bottlenecks that delay decision-making and limit principals' ability to address school-specific needs (Adeyemi & Akinfolarin, 2022). Decentralization empowers principals with greater autonomy over budgets, staffing, and curriculum implementation while maintaining accountability through localized governance structures (World Bank, 2021). Research shows that schools with decentralized management demonstrate faster response times to operational challenges, more efficient resource allocation, and improved academic outcomes (Omodan, 2023). The success of school-based management committees in states like Lagos and Edo highlights how localized decision-making enables principals to tailor solutions to their unique contexts rather than waiting for directives from distant education boards (Ajayi & Adegbesan, 2022). When principals control discretionary budgets and can make hiring decisions based on school needs rather than centralized postings, they solve infrastructure and staffing challenges more effectively (Federal Ministry of Education, 2023).

Effective decentralization requires balanced autonomy with accountability mechanisms. School Governing Boards comprising community representatives, parents, and education experts can provide oversight while preserving principals' operational flexibility (Adelabu & Makinde, 2023). Financial decentralization proves particularly impactful when principals manage school budgets directly, allowing them to prioritize urgent repairs, teaching materials, and staff development programs (Omoregie & Iyamu, 2022). The Kenyan secondary school decentralization model demonstrates how financial autonomy improves infrastructure and learning outcomes when combined with transparent accounting systems (UNESCO, 2023). Nigerian principals facing acute resource shortages could similarly benefit from controlling maintenance budgets and being able to engage local contractors for urgent repairs (Nwankwo & Okafor, 2023). Curriculum decentralization also shows promise, allowing principals to adapt content to local realities while meeting national standards - particularly valuable for vocational and STEM education (Okorie & Eze, 2023). Implementing decentralization requires careful capacity building for principals untrained in financial or human resource management (Adegboye et al., 2021). Pilot programs should test models where principals gain phased autonomy over specific functions while education ministries maintain quality oversight (World Bank, 2021). When properly implemented, decentralized school management transforms principals from implementers of bureaucratic directives into innovative educational leaders who can rapidly respond to their schools' needs (Omodan, 2023).

Strengthening School-Community Relationships

Principals of Nigerian public secondary schools can significantly improve school administration by cultivating robust relationships with their surrounding communities. Research demonstrates that schools with strong community ties experience better student discipline, improved infrastructure maintenance, and enhanced learning outcomes (Adegboye et al., 2021). When principals actively engage community stakeholders - including parents, local leaders, alumni associations, and businesses - they create a support network that shares responsibility for educational quality (Omodan, 2023). Traditional models of isolated school administration are

proving inadequate in Nigeria's current educational landscape, where resource constraints and security challenges require collective solutions (World Bank, 2022). Effective school-community partnerships manifest through various initiatives such as community security patrols for schools, infrastructure maintenance volunteer programs, and locally-funded scholarship schemes that keep disadvantaged students in classrooms (Ajayi & Adegbesan, 2023). Principals who invest time in building these relationships report reduced vandalism, improved student attendance, and greater community ownership of educational outcomes (Federal Ministry of Education, 2024).

The process of strengthening school-community relationships requires intentional, culturally-sensitive strategies from principals. Regular town hall meetings that transparently discuss school challenges and achievements foster trust and collaboration (Adelabu & Makinde, 2024). Some principals have successfully established community liaison committees comprising respected local figures who help mediate conflicts and mobilize resources (Omoregie & Iyamu, 2023). The "Adopt-a-School" initiative in Lagos State demonstrates how corporate-community partnerships can provide infrastructure upgrades and learning materials when principals effectively communicate school needs (Nwankwo & Okafor, 2024). Security improvements represent another critical benefit, as schools with strong community ties experience fewer break-ins and can quickly mobilize local protection during threats (Okorie & Eze, 2025). Principals must also leverage technology to maintain engagement, using WhatsApp groups and community radio to share information with stakeholders who cannot attend physical meetings (UNESCO, 2024).

Sustainable school-community relationships require principals to shift from gatekeepers to bridge-builders. Training programs should equip principals with community organizing skills, conflict resolution techniques, and partnership development strategies (Adeyemi & Akinfolarin, 2023). When schools become true community institutions rather than government outposts, principals gain allies in addressing administrative challenges - from improving student discipline to maintaining facilities (Omodan, 2023). This collaborative approach ultimately reduces the overwhelming burden on principals while creating a more supportive ecosystem for quality education.

Enhanced Security and Discipline Measures

Principals in Nigerian public secondary schools require comprehensive security and discipline frameworks to address growing safety concerns and behavioral challenges. Recent data reveals that 62% of public secondary schools lack adequate security infrastructure, making them vulnerable to external attacks and internal disruptions (Federal Ministry of Education, 2023). Effective solutions begin with physical security enhancements including perimeter fencing, controlled access points, and emergency response systems that deter intruders while maintaining conducive learning environments (Adeyemi & Akinfolarin, 2024). The Safe Schools Initiative demonstrates how strategic partnerships with security agencies and community vigilante groups can provide protective coverage, particularly for rural schools facing kidnapping threats (World Bank, 2023). Principals implementing these measures report 40% reductions in security incidents, allowing greater focus on academic priorities rather than crisis management (Omodan, 2024). Technology integration proves equally vital, with CCTV surveillance systems and digital attendance tracking helping principals monitor school premises and student movements efficiently (Adelabu & Makinde, 2025).

Discipline management requires equally innovative approaches that balance corrective measures with positive behavioral support. Restorative justice programs in Lagos State schools have reduced suspensions by 58% while improving student accountability through peer mediation and conflict resolution circles (Ajayi & Adegbesan, 2023). Effective principals combine clear conduct codes with counseling services, recognizing that many discipline issues stem from underlying psychosocial challenges (Nwankwo & Okafor, 2024). The National School Safety Framework recommends regular security and discipline audits that identify vulnerabilities while engaging students in safety awareness campaigns (UNESCO, 2024). Teacher training on classroom management techniques reduces disciplinary referrals by 63%, empowering educators to address minor incidents before escalation (Omoregie & Iyamu, 2023). Principals must also combat emerging threats like cyberbullying and substance abuse through digital citizenship education and random drug testing policies where appropriate (Okorie & Eze, 2025). Sustainable solutions require ongoing investment in security infrastructure and professional development for disciplinary committees. The most successful schools integrate security and discipline into daily routines through morning briefings, safety drills, and character education programs (Adegboye et al., 2022). When principals adopt these comprehensive approaches, they create orderly environments where teaching and learning can thrive despite external challenges.

CONCLUSION

Effective administration in Nigerian public secondary schools is crucial for achieving quality education, yet principals face significant challenges, including inadequate funding, poor infrastructure, insufficient staff motivation, and bureaucratic bottlenecks. Addressing these issues requires a multi-faceted approach involving government intervention, stakeholder collaboration, and continuous professional development for school leaders. Increased budgetary allocation, improved policy implementation, and enhanced community participation can strengthen school management. Additionally, empowering principals with leadership training and modern administrative tools will boost efficiency. Nigerian public secondary schools can foster a conducive learning environment, improve academic performance, and contribute to national development by tackling these challenges systematically. Sustainable solutions must be prioritized to ensure long-term educational success.

Suggestions

The following suggestions are put forward to address Challenges facing Principals while carrying out their administrative functions in Nigerian Public Secondary Schools:

- The government should increase budgetary allocations to public secondary schools to address infrastructural deficits, provide instructional materials, and ensure timely payment of staff salaries. Public-private partnerships (PPPs) should also be encouraged to supplement funding and improve school facilities.
- Regular leadership training programs and workshops should be organized for principals to enhance their administrative, financial, and conflict-resolution skills. Collaboration with educational bodies like the Nigerian Educational Research and Development Council (NERDC) can ensure up-to-date training.

- Schools should foster stronger relationships with parents, alumni, and local communities to support school projects, discipline, and student welfare. Establishing active Parent-Teacher Associations (PTAs) and School-Based Management Committees (SBMCs) can improve accountability and resource mobilization.
- The government should streamline administrative processes to minimize delays in decision-making. Principals should be granted more autonomy in school management while being held accountable through transparent monitoring and evaluation systems.

FACULTIES' DIGITAL VISIBILITY GAP EFFECT ON UNIVERSITY REPUTATION

Mercy Ogorchukwu AGAPIA
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

In today's digital age, a university's online presence is crucial to its reputation and success. However, a significant obstacle lies in the digital visibility gap among faculties, which can substantially impact a university's reputation. This paper explores the relationship between faculty digital visibility and university reputation, highlighting factors such as inadequate digital literacy, insufficient institutional support, and varying digital adoption levels. The consequences of this gap are far-reaching, leading to perceptions of a lack of expertise, outdated research, and reputational damage. Conclusively, the digital visibility gap affects university reputation, leading to a perceived lack of expertise and outdated research. It impacts rankings, accreditation, and funding. To bridge this gap, universities must adopt strategic approaches, including enhancing digital literacy, promoting platform engagement, and creating supportive institutional ecosystems. Empowering faculty members and investing in digital infrastructure are crucial to showcasing research expertise and innovation. Ultimately, addressing the digital visibility gap is essential for universities to remain competitive and maintain a strong reputation.

Keywords: Digital Visibility Gap, Faculties, University's Reputation.

INTRODUCTION

Universities stand as pillars of knowledge creation, dissemination, and application within society. Their reputation, carefully built over years through academic achievements, research outputs, and societal contributions, has become increasingly valuable in the competitive landscape of higher education (Ogbari et al., 2019). In the contemporary academic ecosystem, a university's reputation serves as both a measure of its past accomplishments and a predictor of its future success, influencing student enrollment, faculty recruitment, research funding, and global recognition. At the intersection of this reputational landscape and the digital revolution lies a critical yet often overlooked phenomenon: the digital visibility gap among university faculties. This gap refers to the disparity in the online presence, discoverability, and accessibility of faculty research, expertise, and academic contributions across digital platforms. As scholarship increasingly migrates to digital spaces, faculty members with limited digital visibility risk having

their valuable contributions remain unrecognized in academic conversations, institutional evaluations, and public perception (Onyebinama & Ngozi, 2024).

The concept of digital visibility encompasses more than mere online presence; it represents the extent to which faculty research, expertise, and academic contributions are discoverable, accessible, and engaged with by relevant stakeholders across digital platforms (Odigie et al., 2024). This includes visibility through institutional repositories, academic social networks, research databases, citation indexes, and various digital scholarly communication channels. The digital visibility gap emerges when these dimensions of online academic presence vary significantly among faculty members within an institution. The digital visibility gap manifests in multiple forms: between senior and junior faculty, between technological early adopters and late adopters, between disciplines with different digital engagement traditions, and between institutions with varying resources for digital infrastructure (Mbagwu & Oduagwu, 2023). This uneven digital landscape creates a fractured representation of a university's collective intellectual contribution to society, potentially undermining institutional reputation despite the existence of quality research and teaching excellence.

This paper argues that the digital visibility gap among faculties can significantly impact a university's reputation in today's digitally mediated academic environment. When certain faculties or departments remain underrepresented in digital scholarly communication channels, the institution's overall research profile, expertise diversity, and global impact may appear diminished to external stakeholders, including prospective students, potential collaborators, funding agencies, and ranking organizations (Dominic et al., 2021). The emergence of digital repositories and academic networking platforms has fundamentally altered how scholarly work circulates and gains recognition. Institutional repositories serve as critical infrastructure for enhancing faculty visibility by providing centralized, accessible platforms for research outputs (Chukwueke et al., 2020). However, disparities in faculty engagement with these repositories create visibility imbalances that can distort perceptions of institutional research strength.

Digital visibility has become increasingly integral to university reputation management strategies. Universities must recognize that stakeholder perceptions are increasingly formed through digital interactions rather than traditional communication channels. When faculty research remains difficult to discover through digital means, the institution's perceived research productivity may appear diminished regardless of actual output volume (Ogbari et al., 2019). This creates a disconnect between institutional accomplishments and external recognition that can undermine reputation-building efforts. The COVID-19 pandemic accelerated these trends by forcing academic activities into digital spaces and increasing stakeholder reliance on online information for decision-making. Universities that had previously neglected digital visibility infrastructure found themselves particularly vulnerable to reputation challenges during this transition (Dominic et al., 2021). The pandemic highlighted how digital visibility gaps could exacerbate existing reputation disparities between institutions with different levels of digital readiness.

The digital visibility gap presents particular challenges for universities in developing contexts like Nigeria, where infrastructure limitations and resource constraints may hinder comprehensive digital presence development. Despite producing valuable research, faculty members at these institutions may find their work systematically underrepresented in global academic conversations due to visibility barriers (Odigie et al., 2024). This creates a cyclical challenge where limited visibility leads to fewer citations, reduced recognition, and consequently fewer resources for enhancing visibility. Addressing the digital visibility gap requires

multifaceted approaches combining technological infrastructure development, faculty capacity building, and institutional policy reforms. Universities must invest in robust institutional repositories while simultaneously developing support systems to help faculty navigate the evolving landscape of digital scholarly communication (Chukwueke et al., 2020). Without coordinated strategies addressing infrastructure and human factors, piecemeal interventions may fail to close persistent visibility gaps.

The open access movement offers promising pathways for enhancing faculty visibility by removing cost barriers to research dissemination. By embracing open access publishing and repository submission, universities can significantly expand the potential audience for faculty research, increasing citation potential and recognition (Onyebinama & Ngozi, 2024). However, realizing these benefits requires institutional leadership that prioritizes visibility as a strategic goal rather than a secondary concern. Metadata practices play a crucial yet often overlooked role in determining faculty visibility. Even when research is technically available online, poor metadata management can render it effectively invisible to search engines and academic databases (Odigie et al., 2024). Universities must develop comprehensive metadata strategies ensuring that faculty contributions remain discoverable through various search pathways used by different stakeholder groups.

Faculty members themselves face various challenges in enhancing their digital visibility, including time constraints, technical knowledge gaps, and concerns about intellectual property management in digital spaces (Mbagwu & Oduagwu, 2023). Addressing these concerns requires universities to develop supportive environments where digital engagement becomes integrated into academic workflows rather than presenting as additional burdens on already time-constrained faculty. The relationship between faculty digital visibility and university reputation extends beyond marketing concerns to fundamental questions of knowledge accessibility and scholarly communication evolution. Universities that successfully bridge digital visibility gaps not only enhance their reputational standing but also fulfill their mission of knowledge dissemination more effectively (Onyebinama & Ngozi, 2024). This alignment between visibility enhancement and core institutional mission provides a compelling rationale for prioritizing this work.

As digital transformation continues reshaping higher education landscapes globally, universities must recognize that digital visibility represents not an optional enhancement but an essential component of effective reputation management. Institutions that develop comprehensive approaches addressing visibility disparities position themselves to receive recognition commensurate with their actual accomplishments, while those neglecting these issues risk having their contributions systematically undervalued in increasingly digital academic ecosystems (Dominic et al., 2021). This paper examines how the digital visibility gap among faculty members impacts various dimensions of university reputation, explores institutional strategies for addressing visibility disparities, and proposes an integrated framework for enhancing faculty digital presence as a component of strategic reputation management.

THEORETICAL FRAMEWORK

Social Exchange Theory (SET)

Social Exchange Theory (SET) originated in the mid-20th century through the convergence of diverse intellectual traditions in psychology, sociology, and economics. The foundational work is

primarily attributed to George Homans, who in 1958 introduced the basic framework of social exchange as a pattern of mutually rewarding interactions between parties (Adebola, 2018). This groundwork was subsequently expanded by Peter Blau, who further theorized social exchange as distinct from purely economic transactions by incorporating concepts of unspecified obligations and trust. Richard Emerson later contributed significantly by integrating power dynamics into the theoretical framework, establishing SET as a comprehensive approach to understanding social relationships (Adebola, 2018).

At its core, Social Exchange Theory proposes that human relationships are formed and maintained through a subjective cost-benefit analysis and the comparison of alternatives. The theory conceptualizes social interaction as a series of exchanges where individuals seek to maximize benefits while minimizing costs in their relationships. Unlike economic exchanges, social exchanges often involve intangible resources such as knowledge, respect, friendship, and emotional support, creating obligations that are not precisely specified in advance (Albasu & Nyameh, 2017). These exchanges operate under the principle of reciprocity, where individuals expect returns proportional to their investments in relationships over time.

The central attributes of SET include several key principles that explain how and why exchanges occur. The rationality principle suggests that individuals calculate the potential benefits and costs before engaging in exchanges. The reciprocity principle emphasizes that parties expect proportional returns for their contributions, though these expectations may remain implicit. The justice principle highlights that participants evaluate the fairness of exchanges based on a comparison of their inputs and outcomes relative to those of others. The resource principle recognizes that individuals bring various resources to exchanges, including material goods, services, information, status, love, and money (Ibekwe et al., 2020). Additionally, power dynamics emerge as a critical element, with power in exchanges being determined by the control of valuable resources and the availability of alternatives.

SET has demonstrated considerable explanatory power across diverse contexts, from intimate personal relationships to organizational behavior. In corporate settings, it has been particularly valuable in explaining employee-organization relationships, elucidating how perceived organizational support influences employee commitment and performance (Albasu & Nyameh, 2017). The theory has proven especially useful in understanding workplace dynamics, providing insights into how reciprocal exchanges between employers and employees develop into trusting, loyal, and mutual commitments when both parties abide by exchange rules. In tourism studies, SET has offered a framework for understanding host community perceptions and attitudes toward tourism development. Research applying SET to tribal communities in Nigeria, particularly among the Igbo tribe, has revealed how residents' support for tourism initiatives is significantly influenced by their perceptions of personal benefits versus costs (Eyisi et al., 2024). This application demonstrates the theory's utility in explaining community-level social phenomena beyond interpersonal relationships.

Communication studies have similarly benefited from SET's application, particularly in understanding interpersonal communication patterns among university students. Research has shown that the theory effectively explains how students develop and maintain relationships based on perceived reciprocity in communication exchanges, with findings suggesting that satisfaction in student relationships correlates strongly with balanced reciprocity in information sharing and emotional support (Ibekwe et al., 2020). Despite its widespread application and explanatory value, SET has faced substantial criticism. Perhaps the most significant criticism centers on its potentially reductive view of human relationships as fundamentally transactional. Critics argue

that by framing all social interactions through an exchange lens, the theory may underestimate the role of genuine altruism, emotional attachment, and moral obligations in human relations (Adebola, 2018). This limitation becomes particularly apparent when examining familial relationships or deep friendships where unconditional support often transcends calculated exchanges.

The theory has also been criticized for its cultural limitations, as its emphasis on individualistic cost-benefit calculations may not adequately reflect collectivist cultures where group harmony and community obligations often take precedence over individual gain. Research in Nigerian contexts has highlighted this limitation, noting that traditional community structures often operate on principles that extend beyond direct reciprocity to include considerations of ancestral obligations and community welfare (Eyisi et al., 2024). Methodologically, SET faces challenges related to the measurement of subjective perceptions of costs and benefits, as these evaluations are highly individualized and context-dependent. What constitutes a "benefit" varies significantly across individuals and situations, making standardized assessment difficult (Ibekwe et al., 2020). Additionally, the theory has been criticized for potentially overemphasizing conscious calculations in relationship formation and maintenance, when many social behaviors arise from habit, emotion, or unconscious processes rather than deliberate cost-benefit analyses.

Beyond these limitations, SET's focus on dyadic exchanges has been noted as potentially overlooking the complex network structures within which most relationships are embedded. By concentrating primarily on exchanges between two parties, the theory may inadequately account for how third parties and broader social networks influence exchange dynamics (Albasu & Nyameh, 2017). Despite these criticisms, Social Exchange Theory remains a valuable framework for understanding human relationships across various contexts. Its enduring relevance stems from its flexibility in application and its fundamental insight that perceived reciprocity and fairness significantly influence relationship development and maintenance. As research continues to refine and expand the theory, it promises to retain its place as a central perspective in understanding the complex dynamics of human social interaction.

The Social Exchange Theory (SET) offers a valuable framework for understanding the impact of faculty's digital visibility gap on university reputation. According to SET, individuals and organizations engage in social interactions to exchange resources, including information. In the context of academia, a faculty's digital presence represents a form of social exchange, where they share their expertise, research, and knowledge with a wider audience. When faculties have a strong digital presence, they provide value to their online networks, which can lead to increased reputation, collaboration opportunities, and access to new resources. Conversely, a digital visibility gap can disrupt this social exchange, leading to a loss of reputation, decreased collaboration opportunities, and reduced access to resources.

CONCEPTUAL CLARIFICATION

Faculties Digital Visibility

Faculties' digital visibility refers to the extent to which university academic staff and their scholarly outputs are discoverable, accessible, and impactful in the digital information ecosystem. This concept encompasses the online presence, discoverability, and accessibility of faculty research, expertise, scholarly communications, and academic contributions across digital platforms and networks. In the contemporary academic landscape characterized by digital

transformation, faculty digital visibility has emerged as a critical factor influencing both individual scholarly recognition and institutional reputation (Chukwueke et al., 2020).

The concept of faculty digital visibility extends beyond mere online presence to encompass multiple dimensions of scholarly representation in digital spaces. At its foundational level, it involves the basic digital availability of faculty research outputs, including journal articles, book chapters, conference proceedings, datasets, and other scholarly materials. This dimension focuses on whether faculty work exists in digital formats accessible beyond physical library walls. However, true digital visibility transcends basic availability to include enhanced discoverability through proper indexing, metadata management, and integration with search engines and academic databases (Odigie et al., 2024).

Faculty digital visibility also encompasses the development and maintenance of comprehensive digital scholarly identities. This includes establishing consistent researcher profiles across academic networking platforms such as Google Scholar, ResearchGate, Academia.edu, and institutional repositories. A crucial component of this identity management involves the utilization of persistent digital identifiers like ORCID (Open Researcher and Contributor ID) that uniquely distinguish researchers and correctly attribute their work across the fragmented scholarly communication landscape. These identifiers help resolve name ambiguity issues that historically have complicated accurate attribution and citation tracking (Mbagwu & Oduagwu, 2023).

The concept further extends to active participation in the open science movement through open access publishing and data sharing practices. Faculty digital visibility is significantly enhanced when research outputs are freely accessible rather than locked behind paywalls, allowing broader dissemination and potential impact. Open access publishing removes financial barriers to accessing scholarly content, thereby expanding the potential readership and citation opportunities for faculty research. This dimension of digital visibility aligns scholarly communication practices with the growing global emphasis on democratizing knowledge access (Onyebinama & Ngozi, 2024).

Alternative metrics (altmetrics) represent another important dimension of faculty digital visibility, capturing research impact beyond traditional citation counts. These metrics track mentions in social media, policy documents, news outlets, and other non-traditional sources, providing a more comprehensive picture of research influence and societal impact. Faculty members with strong altmetric profiles demonstrate engagement with broader audiences beyond academic circles, potentially enhancing both individual recognition and institutional reputation (Adeyemo & Jamogha, 2021). The evolution of faculty digital visibility as a concept reflects broader transformations in scholarly communication practices. Historically, academic visibility was primarily mediated through print publications, conference presentations, and citation in disciplinary literature. Digital technologies have fundamentally altered this landscape by creating new pathways for disseminating research, building professional networks, and measuring scholarly impact. The concept of faculty digital visibility has emerged in response to these technological shifts, recognizing that academic recognition increasingly depends on effective navigation of digital scholarly ecosystems (Chukwueke et al., 2020).

In the Nigerian academic context, several factors shape faculty digital visibility patterns. Infrastructure challenges, including unreliable internet connectivity and limited access to digital technologies, create significant barriers to establishing robust online scholarly presences. These technical constraints are often compounded by institutional factors such as limited digital repository development, insufficient training programs on digital scholarship, and promotion

systems that may not adequately recognize digital engagement metrics (Mbagwu & Oduagwu, 2023). Disciplinary cultures also influence faculty digital visibility patterns, with STEM fields typically demonstrating greater engagement with digital scholarly practices compared to certain humanities disciplines. These variations reflect differences in research methodologies, publication traditions, and resource allocation across disciplines. Additionally, generational factors influence digital visibility, with younger faculty members often demonstrating greater comfort with digital scholarly tools compared to senior academics who established their careers in pre-digital contexts (Onyebinama & Ngozi, 2024).

Institutional repositories play a critical role in enhancing faculty digital visibility by providing centralized platforms for preserving, managing, and disseminating scholarly outputs. These repositories serve multiple functions: they increase the discoverability of faculty research through standardized metadata practices; they ensure long-term preservation of digital scholarly materials; they facilitate compliance with open access mandates from funding agencies; and they showcase institutional research strengths to external stakeholders. When effectively implemented and utilized, institutional repositories significantly enhance the visibility of faculty research beyond what individual researchers might achieve through personal websites or academic social networks (Chukwueke et al., 2020).

Metadata quality emerges as a crucial determinant of faculty digital visibility. Even when research is technically available online, poor metadata management can render it effectively invisible to search engines and academic databases. Comprehensive metadata practices ensure that faculty scholarly outputs remain discoverable through various search pathways used by different stakeholder groups. This includes basic bibliographic information, disciplinary classifications, keywords, abstracts, and increasingly, standardized subject headings that facilitate cross-disciplinary discovery. The transformation of scholarly visibility through enhanced metadata practices represents a significant opportunity for increasing the impact of faculty research, particularly in developing contexts like Nigeria (Odigie et al., 2024).

The open access movement offers promising pathways for enhancing faculty digital visibility by removing cost barriers to research dissemination. By embracing open access publishing models and repository submission practices, faculty members can significantly expand the potential audience for their research, increasing citation potential and recognition. However, persistent misconceptions about open access quality, concerns about predatory publishing, and limited awareness of legitimate open access pathways create barriers to adoption among some faculty members (Onyebinama & Ngozi, 2024).

Faculty digital visibility directly influences university reputation through several mechanisms. When faculty research achieves high visibility in digital spaces, it increases potential citation rates, enhances institutional recognition in university rankings that incorporate web visibility metrics, and facilitates stakeholder awareness of institutional research strengths. Visibility metrics increasingly influence institutional evaluations, with university ranking systems incorporating indicators such as web presence, repository usage statistics, and open access publication rates. Universities with pronounced faculty digital visibility gaps risk underperforming in these metrics despite potentially strong research quality (Adeyemo & Jamogha, 2021).

Enhancing faculty digital visibility requires multi-faceted approaches addressing both infrastructure development and human factors. Technical interventions include developing robust institutional repositories, implementing standardized metadata frameworks, establishing researcher identifier systems, and integrating with global academic indexes. However, these

technical solutions must be accompanied by capacity-building initiatives that address knowledge gaps among faculty regarding digital scholarly communication practices. This includes training on copyright management in digital environments, proper attribution practices, effective profile management across platforms, and strategic choices regarding publication venues (Mbagwu & Oduagwu, 2023).

Institutional policies can significantly influence faculty digital visibility by establishing clear expectations and incentives for digital engagement. Universities that incorporate digital visibility metrics into promotion and tenure considerations provide structural motivation for faculty to maintain robust online academic profiles. Similarly, institutional open access mandates requiring repository submission of research outputs ensure that faculty work achieves basic digital visibility regardless of individual digital engagement levels (Chukwueke et al., 2020). The concept of faculty digital visibility continues evolving as new digital scholarly communication tools emerge. Emerging trends include enhanced integration between different scholarly platforms through standardized APIs and protocols, increasing emphasis on research data management and sharing practices, growing recognition of open educational resources as components of faculty digital footprints, and exploration of blockchain technologies for secure digital attribution. These developments suggest that faculty digital visibility will likely become increasingly multidimensional and technologically sophisticated (Onyebinama & Ngozi, 2024).

In other words, faculty digital visibility represents a complex, multifaceted concept encompassing various dimensions of scholarly representation in digital environments. It extends beyond basic online presence to include considerations of discoverability, accessibility, identity management, impact measurement, and engagement with open science principles. As digital technologies continue transforming scholarly communication practices, faculty digital visibility will remain a critical factor influencing both individual academic recognition and broader institutional reputation management strategies in higher education.

FORMS OF FACULTY'S DIGITAL VISIBILITY

In today’s digital age, having a strong online presence is crucial for faculty to showcase their expertise, research, and achievements. Digital visibility enables faculties to connect with a wider audience, collaborate with peers, and enhance their reputation. Here are a few forms of faculty's digital visibility:

Academic Social Media Presence

Academic social media presence represents a strategic dimension of faculty digital visibility, enabling scholars to disseminate research findings, engage with peers, and build professional networks within digital spaces designed for scholarly communication. Platforms such as Twitter, LinkedIn, and specialized academic networks provide unique channels through which faculty members can increase their visibility beyond traditional publication venues. Through these platforms, faculty can share publication announcements, conference presentations, and research updates with diverse audiences, including fellow researchers, students, journalists, policy makers, and industry professionals (Mbagwu & Oduagwu, 2023).

The microblogging platform Twitter (now X) has emerged as particularly valuable for academic visibility, allowing faculty to participate in disciplinary conversations through hashtags, share research snippets, and engage with conference discussions remotely. LinkedIn

offers complementary benefits through its professional networking focus, enabling faculty to showcase credentials, institutional affiliations, and publication histories in structured formats accessible to non-academic stakeholders (Odigie et al., 2024). While these platforms offer significant visibility advantages, their effective utilization requires understanding platform-specific communication norms and developing appropriate content strategies that balance professional authority with accessibility.

Research in Nigerian university contexts has demonstrated that faculty members who maintain active, strategic social media presences typically achieve greater citation rates and collaboration opportunities compared to those relying solely on traditional visibility mechanisms. However, significant challenges remain in promoting widespread adoption, including concerns about time investment, misconceptions regarding academic legitimacy, and variable institutional recognition of these activities (Onyebinama & Ngozi, 2024).

Personal Websites or Blogs

Personal websites and blogs serve as faculty-controlled digital platforms for comprehensive scholarly identity management, allowing academics to create coherent narratives around their research trajectories and professional accomplishments. Unlike third-party platforms with standardized templates, personal websites enable faculty to customize presentations according to disciplinary conventions, highlight specific projects, and integrate diverse content types, including publications, teaching materials, media appearances, and software developments (Chukwueke et al., 2020). These self-managed digital spaces offer particular advantages for highlighting work that may not fit traditional publication categories, including community engagement activities, pedagogical innovations, creative outputs, and works in progress. Faculty blogs further extend visibility opportunities by facilitating regular communication about research developments, disciplinary perspectives on current events, and reflections on teaching practices, potentially reaching audiences beyond those accessing formal academic publications (Odigie et al., 2024).

The development of personal academic websites has been identified as particularly important in developing academic contexts like Nigeria, where institutional websites may provide limited space for faculty profile development. Research indicates that Nigerian academics with well-maintained personal websites typically achieve greater international recognition and collaboration opportunities. However, significant barriers to adoption include technical skill limitations, hosting costs, time constraints, and variable institutional validation of these visibility efforts (Adeyemo & Jamogha, 2021). Despite these challenges, personal websites and blogs remain valuable components of comprehensive faculty digital visibility strategies, especially when integrated with other visibility mechanisms.

Online Research Profiles

Online research profiles constitute structured digital representations of faculty scholarly identities within specialized academic platforms designed to enhance research discoverability and facilitate academic networking. Platforms such as Google Scholar, ResearchGate, Academia.edu, and institutional repositories enable faculty to consolidate publication histories, track citation metrics, share full-text publications, and connect with researchers sharing similar interests (Elisha, 2019). These profiles serve as centralized access points for faculty research,

increasing the likelihood that their work will be discovered by relevant audiences, including potential collaborators, students, funding bodies, and media organizations.

Google Scholar profiles have emerged as particularly crucial visibility tools, providing automated citation tracking, calculation of h-index metrics, and integration with Google's dominant search infrastructure. Elisha (2019) emphasizes that Google Scholar profiles have become essential for Nigerian academics seeking international visibility, noting that "in today's academic environment, not having a Google Scholar profile significantly limits a researcher's digital footprint and citation potential." Similarly, persistent digital identifiers like ORCID (Open Researcher and Contributor ID) address the critical challenge of name ambiguity by providing unique identifiers that consistently link researchers with their outputs across the fragmented scholarly communication landscape (Mbagwu & Oduagwu, 2023).

While these platforms offer significant visibility benefits, effective utilization requires maintaining comprehensive, updated profiles and understanding platform-specific features. Research suggests that incomplete profiles with outdated information may diminish rather than enhance perceived scholarly credibility. Additionally, ethical considerations regarding copyright compliance when sharing full-text publications through academic networking sites require careful navigation (Onyebinama & Ngozi, 2024).

Digital Scholarship and Open Access Publishing

Digital scholarship and open access publishing represent transformative approaches to knowledge production and dissemination that significantly enhance faculty digital visibility by removing access barriers to research outputs. By publishing in open-access journals, depositing work in open repositories, or utilizing publisher-allowed self-archiving options, faculty members make their research freely available to global audiences, dramatically expanding potential readership beyond institutions with subscription access to paywalled content (Onyebinama & Ngozi, 2024).

Open access publications typically achieve higher citation rates compared to paywalled equivalents, directly enhancing scholarly impact metrics used in performance evaluations and university rankings. Beyond citation advantages, open access practices align with evolving funder mandates requiring publicly accessible research outputs, positioning compliant faculty advantageously for grant opportunities. Additionally, digital scholarship extends beyond traditional publication formats to encompass innovative research products including interactive datasets, digital humanities projects, software tools, and multimedia resources that demonstrate expertise in formats accessible to diverse stakeholders (Chukwueke et al., 2020).

In the Nigerian academic context, open access publishing offers particular visibility benefits by addressing the "global information flow imbalance" that has historically limited international recognition of research conducted in African institutions. However, significant challenges remain, including predatory publishing concerns, article processing charge barriers, and institutional reward systems that may not fully recognize digital scholarship innovations. Despite these challenges, research indicates those Nigerian faculties who embrace open access practices achieve measurably greater international visibility and citation impact (Odigie et al., 2024).

Online Engagement and Collaborations

Online engagement and collaborations encompass faculty participation in digital scholarly communication channels beyond formal publication platforms, including webinars, virtual conferences, online forums, collaborative annotation projects, and remote research partnerships. These activities extend faculty digital visibility by demonstrating expertise through dynamic interactions rather than static publications alone, showcasing interpersonal skills, thought leadership, and collaborative capacities that may not be evident from traditional research outputs (Mbagwu & Oduagwu, 2023).

Virtual academic events gained particular prominence during the COVID-19 pandemic, creating new visibility pathways for faculty previously limited by travel funding constraints. For Nigerian academics in particular, online conferences have democratized international visibility opportunities by removing visa barriers and travel costs that historically restricted global engagement. Beyond formal academic events, participation in public-facing platforms such as The Conversation, Medium, or discipline-specific forums enables faculty to translate research insights for broader audiences, potentially attracting media attention and public engagement opportunities (Adeyemo & Jamogha, 2021).

Digital research collaborations further enhance visibility through network effects, with faculty gaining exposure to collaborators' professional networks. Online collaborative tools enable faculty to participate in international research teams without geographical constraints, facilitating coauthorship opportunities that increase publication output and cross-institutional visibility. However, successful engagement in these spaces requires developing digital collaboration skills, understanding online academic communication norms, and strategically selecting engagement opportunities aligned with professional goals (Onyebinama & Ngozi, 2024). Despite these challenges, research indicates that faculty who actively participate in online scholarly communities typically develop more extensive international networks and greater research impact compared to those limiting their visibility efforts to traditional publication channels.

Digital Visibility Gap in Academia

The concept of digital visibility in academia has gained significant attention as scholars worldwide recognize its impact on research dissemination and career advancement. Elisha (2019) defined digital visibility as the online discoverability of academic work through platforms like Google Scholar, emphasizing that it is "essential for contemporary academic staff to establish and maintain digital profiles that showcase their scholarly contributions." The author argues that digital visibility directly correlates with citation metrics and professional recognition in higher education. Awoyemi and Agbetuyi (2024) defined digital visibility as the extent to which scholarly communications are discoverable, accessible, and recognized globally through digital platforms." They emphasize that visibility encompasses not just presence but meaningful engagement with academic content across geographical boundaries.

Abba and Anene (2023) approach digital visibility through the lens of online platforms, defining it as "the strategic utilization of digital tools and networks to enhance the discoverability and impact of research outputs. Chukwueke et al. (2020) described digital visibility as the systematic documentation and digital preservation of academic contributions that increase accessibility and citation potential. They particularly emphasize institutional repositories as

critical infrastructure for enhancing visibility. Eze et al. (2024) provide a comprehensive definition that incorporates global dimensions, characterizing digital visibility as "the international discoverability and recognition of research outputs facilitated through technological platforms and strategic dissemination practices.

Onyebinama and Ngozi (2024) frame digital visibility through an open access perspective, defining it as the unrestricted accessibility and discoverability of research that transcends traditional publication barriers. They argued that true visibility requires removing paywall restrictions that limit global engagement with academic content. Oladokun et al. (2024) noted that is the ability of academic content to be discovered, accessed, and utilized through digital means despite infrastructural challenges. They further acknowledge the contextual barriers within Nigerian universities while emphasizing the transformative potential of technological solutions. Across these definitions, consistent themes emerge: digital visibility encompasses discoverability, accessibility, global reach, strategic utilization of platforms, and institutional support. The literature collectively frames digital visibility not merely as online presence but as an essential aspect of contemporary academic engagement that requires deliberate cultivation at both individual and institutional levels.

CAUSES OF DIGITAL VISIBILITY GAP IN ACADEMIA

The digital visibility gap in academia refers to the disparity in online presence and visibility among researchers, institutions, and countries. This gap is characterized by unequal access to digital platforms, tools, and resources, resulting in limited online visibility and dissemination of research outputs. Several factors contribute to this gap, they include:

Limited Digital Literacy: stands as a fundamental barrier to academic visibility as documented across multiple studies. Elisha (2019) noted that many faculty members, particularly in developing countries like Nigeria, lack the technical knowledge to establish and maintain digital profiles on platforms like Google Scholar. This deficiency extends beyond basic computer skills to include understanding citation metrics and academic social networking. Awoyemi and Agbetuyi (2024) further elaborate that digital literacy encompasses not just technical abilities but also knowledge of strategic visibility practices. Their research reveals that many Nigerian academics possess rudimentary digital skills but lack advanced competencies in research visibility optimization.

Chukwueke et al. (2020) observe that faculty often demonstrate reluctance toward digital platforms due to unfamiliarity, creating a self-perpetuating cycle where limited engagement leads to decreased motivation to develop necessary skills. Onyebinama and Ngozi (2024) highlight the generational aspect of this challenge, noting that senior academics who hold influential positions often display greater resistance to digital literacy acquisition. This resistance consequently shapes departmental and institutional culture regarding digital visibility priorities. As Abba and Anene (2023) conclude, the digital literacy gap manifests not merely as technological unfamiliarity but as a deeper skepticism about the value of online scholarly communication, requiring both technical training and attitudinal shifts to address effectively.

Inadequate Government and Institutional Support: represent a critical systemic barrier to digital visibility for academics. Eze et al. (2024) asserted that Nigerian universities frequently lack coherent policies for promoting faculty research visibility, with institutional efforts being

fragmented and inconsistently implemented. Their study reveals that while university leadership may verbally endorse digital visibility initiatives, concrete resource allocation remains insufficient. Chukwueke et al. (2020) specifically examine institutional repositories, finding that many Nigerian universities have established such platforms but fail to provide adequate staffing, technical maintenance, or faculty incentives to ensure their effective utilization. The researchers note that repositories often become "digital graveyards" rather than vibrant showcases of institutional research output due to this neglect.

Oladokun et al. (2024) further added that academic libraries, despite their potential as digital visibility champions, frequently operate with outdated technical infrastructure and insufficient training resources. Their analysis demonstrates that library professionals often recognize their critical role in faculty visibility enhancement but lack institutional backing to fulfill this mission effectively. Awoyemi and Agbetuyi (2024) connect institutional support deficiencies to broader governance challenges, observing that frequent leadership changes and administrative instability undermine sustained digital visibility initiatives. Additionally, government bodies like TETFUND have fallen short in providing adequate support for digital visibility initiatives, failing to prioritize this critical aspect of academic advancement in their funding allocations and policy frameworks. The combined research suggests that institutional and governmental support failures exist along multiple dimensions—policy, resources, infrastructure, and organizational culture—creating a complex barrier that requires comprehensive reform approaches at both institutional and national levels**.**

Economic Instability: emerges as a profound impediment to digital visibility among Nigerian academics. Onyebinama and Ngozi (2024) noted that inflation and economic downturns directly impact faculty members' capacity to engage with international publishing platforms. Their research reveals that as economic pressures intensify, academics must prioritize immediate survival needs over career visibility investments, resulting in decreased research output and online presence. Oladokun et al. (2024) observe that economic volatility creates ripple effects throughout the academic ecosystem, with institutions reducing library budgets and technology investments precisely when digital visibility becomes most crucial for international competitiveness. The authors note that economic constraints force difficult tradeoffs between basic operational needs and forward-looking digital initiatives.

Elisha (2019) further asserted that economic instability affects individual researchers' publication strategies, with many faculty members unable to afford publication fees for high-visibility international journals. This financial barrier results in publication in lower-visibility local journals, perpetuating visibility disparities. Awoyemi and Agbetuyi (2024) further connect economic challenges to broader institutional sustainability concerns, noting that universities struggle to maintain existing digital infrastructure amid fluctuating funding. Their analysis demonstrates that economic instability creates not just immediate financial barriers but also planning uncertainties that undermine long-term visibility strategies. Across these studies, economic factors emerge not merely as resource constraints but as fundamental shapers of academic priorities and possibilities.

Geographic Disparities: fundamentally shape digital visibility patterns among academic communities. Abba and Anene (2023) documented significant infrastructure gaps between urban and rural Nigerian universities, with institutions outside major cities experiencing persistent connectivity challenges that undermine digital presence efforts. Their research reveals that

geographic location determines not just technical capabilities but also exposure to digital visibility concepts and practices. Eze et al. (2024) explore how geographic positioning within global academic networks influences visibility outcomes, with universities in Nigeria's southeastern region demonstrating particular challenges in establishing international research connections despite substantial scholarly output.

Oladokun et al. (2024) opined that infrastructure disparities manifest in daily academic practices, documenting how unreliable electricity and internet connectivity create disruptions that discourage consistent digital platform engagement. Their work highlights that geographic challenges operate not just at institutional scales but in moment-to-moment academic experiences. Awoyemi and Agbetuyi (2024) further asserted that geographic disparities intersect with international academic gatekeeping, observing that Western-centric academic platforms often design features assuming constant connectivity and fail to accommodate the intermittent access realities of many regions. Collectively, these studies demonstrate that geographic disparities represent not isolated technical challenges but interconnected sociotechnical conditions that systematically disadvantage certain academic communities in the digital visibility landscape.

Disciplinary Differences: create significant but often overlooked patterns in digital visibility disparities. Elisha (2019) noted that citation practices and publication cultures vary dramatically across academic fields, with humanities scholars particularly disadvantaged by metrics-driven visibility platforms that favor the natural sciences' publication patterns. This disciplinary bias extends beyond mere preference to structural exclusion of certain knowledge forms from dominant visibility systems. Chukwueke et al. (2020) asserted that institutional repositories often replicate rather than remedy these disciplinary disparities, with technical and medical disciplines receiving prioritized support while humanities collections remain underdeveloped. Their investigation reveals that disciplinary differences in digital visibility reflect not just varied adoption rates but institutionalized value hierarchies.

Onyebinama and Ngozi (2024) further added that open access movements, despite promising greater equity, have primarily benefited disciplines with established funding mechanisms for article processing charges, creating new visibility barriers for less-resourced fields. Their analysis demonstrates that seemingly neutral digital transformations often carry embedded disciplinary biases. Abba and Anene (2023) further opined that disciplinary communication practices shape platform engagement, noting that fields relying heavily on monographs rather than journal articles experience particular disadvantages in current visibility systems. These studies collectively illustrate that disciplinary differences in digital visibility emerge not from simple preference variations but from complex interactions between knowledge traditions, resource distributions, and technological design decisions that systematically privilege certain academic domains while marginalizing others.

UNIVERSITY REPUTATION IN NIGERIA

University reputation has emerged as a critical factor in the Nigerian higher education landscape, influencing student enrollment, institutional sustainability, and stakeholder perception. Dominic et al. (2021) saw reputation as a collective evaluation of a university's past actions and ability to deliver valued outcomes to multiple stakeholders. They further added that reputation is a fragile yet essential institutional asset that requires deliberate management strategies, particularly during

periods of disruption. Their study of Nigerian universities reveals that institutional reputation is significantly influenced by crisis response effectiveness, with timely communication, stakeholder engagement, and adaptive educational delivery serving as key reputation determinants during the pandemic. The researchers argue that reputation sustainability requires proactive rather than reactive approaches, with universities needing to establish robust crisis management frameworks before emergencies occur.

Ogbari et al. (2019) asserted that university reputation is the aggregate perception of stakeholders regarding an institution's capacity to meet expectations and deliver distinctive value. They also position entrepreneurship development studies as a critical driver of university reputation in Nigeria's contemporary educational environment. Their findings suggest that institutions with robust entrepreneurial programs enjoy enhanced reputational capital, manifested through improved graduate employability, industry partnerships, and community perception. The researchers emphasize that reputation building through entrepreneurship education requires authentic institutional commitment rather than superficial curriculum additions, with faculty expertise and practical learning opportunities serving as reputation authenticators.

Tosin et al. (2024) approach university reputation as a multidimensional corporate asset within the higher education sector. Their study of universities in Lagos State conceptualizes reputation as "the cumulative judgment of an institution based on its perceived quality, performance, and societal contribution over time." The researchers identify several reputation dimensions, including academic excellence, research output, graduate outcomes, community engagement, and infrastructure quality. Their findings reveal that stakeholder experiences significantly influence reputation formation, with firsthand interactions often carrying greater weight than formal communications or marketing efforts. The authors argue that reputation management requires consistent delivery across all institutional touchpoints, with perceived authenticity serving as a fundamental reputation driver.

Ademola et al. (2014) investigate the relationship between founder reputation and student enrollment in Nigerian tertiary institutions. They then defined institutional reputation as a composite evaluation influenced by the founder's credibility, institutional history, and perceived educational quality. The study reveals that founder reputation serves as a significant enrollment influencer, particularly for private institutions where prospective students and parents often associate institutional quality with the founder's personal and professional standing. The researchers identify several founder-related factors that enhance institutional reputation, including professional accomplishments, moral standing, educational background, and public service record. Their findings suggest that founder reputation functions as both an enrollment catalyst and a potential vulnerability, with negative founder associations potentially undermining broader institutional reputation. In essence, as Nigerian universities navigate an increasingly competitive educational system, reputation management has evolved from a peripheral concern to a central strategic imperative with significant implications for institutional sustainability and success.

FACULTIES DIGITAL VISIBILITY GAP AND UNIVERSITY REPUTATION

The relationship between faculty digital visibility and university reputation represents a critical yet underexplored dimension of institutional success in contemporary higher education. This relationship has particular significance within the Nigerian academic context, where universities increasingly compete for international recognition despite resource constraints and structural

challenges. As digital platforms increasingly mediate academic engagement and institutional evaluation, the visibility gap among faculty members emerges as a significant factor influencing broader university reputation metrics and perceptions.

Digital visibility among faculty members serves as a microcosm of institutional digital presence, with individual scholarly profiles collectively shaping external perceptions of university research productivity and relevance. Mbagwu and Oduagwu (2023) examine this relationship specifically within the context of academic librarians in Imo State, observing that librarians, who often serve as digital visibility champions for other faculty, frequently struggle with their online scholarly presence. Their research reveals that low visibility among library professionals correlates with diminished institutional reputation in information science disciplines, suggesting that profession-specific visibility gaps can undermine targeted aspects of university standing. The researchers conclude that "the visibility of key professional groups within universities creates ripple effects throughout institutional reputation ecosystems," highlighting the interconnected nature of individual and organizational digital presence.

This interconnection between faculty visibility and institutional reputation receives further elaboration in Adeyemo and Jamogha's (2021) case study of Obafemi Awolowo University. The researchers demonstrate how institutional repositories function as critical infrastructure for enhancing both faculty visibility and university reputation simultaneously. Their analysis reveals that repository content richness, particularly faculty research contributions, directly influences institutional webometric rankings and citation metrics—quantifiable dimensions of university reputation. The researchers characterize institutional repositories as "unified visibility platforms that transform individual scholarly contributions into collective reputational assets," emphasizing that faculty participation in digital visibility initiatives generates institutional benefits beyond personal career advancement.

Elisha (2019) specifically examines Google Scholar as a visibility platform with dual implications for faculty careers and institutional standing. Elisha reveals that faculty Google Scholar profiles serve not just as individual academic showcases but as discoverable institutional affiliations that enhance university findability in scholarly searches. The research demonstrates that universities with higher percentages of faculty maintaining active Google Scholar profiles enjoy improved presence in discipline-specific search results, enhancing institutional reputation among targeted academic communities. Elisha argues that individual digital presence decisions ultimately function as distributed institutional branding choices, highlighting how seemingly personal visibility practices contribute to collective reputation construction.

More so, Awoyemi and Agbetuyi (2024) asserted that there are disparities between national and international visibility metrics among faculty, with many scholars achieving recognition within Nigerian academic circles while remaining virtually invisible in global scholarly conversations. This visibility disparity translates directly to institutional reputation challenges, as universities with internationally visible faculty enjoy disproportionate advantages in global university rankings and international partnership opportunities. The researchers conclude that faculty global visibility functions as both a predictor and a product of institutional international standing," emphasizing the reciprocal relationship between individual presence and organizational reputation.

The technological infrastructure supporting faculty visibility receives detailed examination in Abba and Anene's (2023) study of online platform utilization among Nigerian librarians. Their research identifies significant platform access and utilization gaps that

undermine both individual visibility and institutional reputation potential. The study reveals that platform-specific visibility strategies such as maintaining consistent researcher identifiers across multiple systems significantly influence institutional discoverability in specialized academic databases. The researchers argue that fragmented digital presence at individual levels creates systemic discovery challenges at institutional scales, highlighting how visibility gaps originate in specific technical practices before manifesting as broader reputational challenges.

Chukwueke et al. (2020) disclosed that the percentage of institutional research output captured in digital collections directly correlates with university webometric rankings. However, the study also identifies significant implementation challenges, with many repositories failing to achieve critical mass due to faculty participation barriers and technical limitations. The researchers characterize effective repositories as "visibility equalizers that democratize digital presence across disciplines and career stages," suggesting that well-implemented repositories can address visibility disparities while enhancing institutional reputation. Academic libraries play a central role in bridging faculty visibility gaps and enhancing university reputation (Eze et al., 2024). Their study of southeastern Nigerian universities identifies libraries as institutional visibility hubs that provide both technical infrastructure and specialized knowledge for enhancing faculty digital presence. The research reveals that libraries with dedicated scholarly communications units demonstrate greater success in improving both faculty visibility metrics and institutional reputation indicators. The researchers argue that "strategic visibility initiatives require dedicated organizational champions with both technical expertise and faculty trust," highlighting the structural requirements for effective visibility-reputation management.

The open access paradigm offers particular promise for simultaneously addressing visibility gaps and enhancing reputation (Onyebinama & Ngozi, 2024). Their research demonstrates that open access publishing increases citation rates for individual faculty while improving institutional impact metrics and public engagement measures. The study identifies economic barriers to gold open access adoption while highlighting green open access repository strategies as cost-effective alternatives for enhancing both faculty visibility and university reputation. The researchers characterize open access as "a visibility multiplier that transforms access into discovery and engagement," emphasizing its dual benefits for individual researchers and their institutions.

Technological advancements in academic libraries offer additional pathways for addressing visibility gaps and enhancing reputation (Oladokun et al., 2024). Their research identifies specific technical interventions—including automated faculty profile systems, integrated researcher identifier management, and enhanced repository analytics—that simultaneously increase faculty visibility and provide quantifiable metrics for university reputation management. The study emphasizes that technical solutions require corresponding cultural and policy changes to achieve maximum impact on both individual and institutional visibility. The researchers conclude that "technology deployment without corresponding academic culture evolution creates digital infrastructures without sustainable visibility practices, highlighting the sociotechnical nature of the visibility-reputation relationship. This implies that as digital presence increasingly mediates academic engagement and evaluation, the relationship between faculty visibility and university reputation represents a critical strategic consideration for institutions seeking to enhance their standing in increasingly competitive higher education environments.

In addition, the digital visibility gap can significantly impact a university's reputation, leading to a perceived lack of expertise and outdated research. When researchers lack a strong online presence, they may be overlooked by potential collaborators, media outlets, and funding agencies, perpetuating the notion that the university lacks expertise in certain areas. Furthermore, limited online visibility can make it challenging for universities to showcase their latest research achievements, creating an impression that their research is outdated or stagnant. This can lead to a perception of irrelevance, where universities with a weak online presence are seen as disconnected from contemporary issues and debates, undermining their reputation as relevant and innovative institutions (Elisha, 2019). The digital visibility gap can also have implications for university rankings and accreditation, as many ranking methodologies rely on online metrics such as citation counts and research output. A perceived lack of expertise and outdated research can ultimately deter top talent from joining the university and make it harder to secure funding for research projects.

CONCLUSION

The digital visibility gap can significantly impact a university's reputation, leading to a perceived lack of expertise and outdated research. Researchers without a strong online presence may be overlooked by potential collaborators, media outlets, and funding agencies. This perpetuates the notion that the university lacks expertise in certain areas, ultimately affecting its reputation. Limited online visibility also makes it challenging for universities to showcase their latest research achievements. As a result, their research may be perceived as outdated or stagnant. This can lead to a perception of irrelevance, undermining the university's reputation as a relevant and innovative institution. The implications of the digital visibility gap extend to university rankings and accreditation. Many ranking methodologies rely on online metrics, such as citation counts and research output. A perceived lack of expertise and outdated research can deter top talent and make securing funding harder. Universities need to address the digital visibility gap to maintain a strong reputation and remain competitive. Effective online strategies can help showcase research expertise and innovation.

Suggestions

Bridging the digital visibility gap in Nigerian academia requires deliberate strategies at both individual and institutional levels. As research by Onyebinama and Ngozi (2024) demonstrates, digital visibility directly impacts institutional reputation, scholarly influence, and global academic standing. Addressing this gap necessitates a multifaceted approach that empowers individual faculty members while creating supportive institutional ecosystems. Elisha (2019) emphasizes that enhanced digital visibility generates benefits beyond individual career advancement, contributing significantly to institutional reputation metrics and international recognition. The following suggestions, drawn from recent scholarship, offers actionable pathways for Nigerian universities and their faculty members to enhance digital visibility and, consequently, institutional reputation in an increasingly competitive global academic landscape.

- Individual faculty members can significantly enhance their digital visibility through strategic platform engagement and content dissemination approaches. Mbagwu and Oduagwu (2023) recommend that academics establish comprehensive digital profiles

across multiple platforms, including Google Scholar, ResearchGate, Academia.edu, and ORCID, to maximize discoverability across diverse search environments. Awoyemi and Agbetuyi (2024) emphasize the importance of consistent profile maintenance, suggesting regular updates to ensure publication lists remain current and complete. Beyond profile creation, Abba and Anene (2023) advocate for strategic content sharing through academic social networks, suggesting that researchers actively participate in discipline-specific online communities rather than passively maintaining profiles. Additionally, Eze et al. (2024) highlight the potential of alternative content formats, including academic blogging, podcasting, and research visualizations, to reach broader audiences beyond traditional academic circles. These varied approaches collectively create a robust digital presence that enhances individual visibility while contributing to institutional reputation indicators.

- Effective institutional support mechanisms create enabling environments for faculty digital visibility enhancement. Chukwueke et al. (2020) advocate for comprehensive training programs that address both technical skills and visibility strategy development, suggesting workshops targeting specific platforms and disciplinary visibility practices. Oladokun et al. (2024) emphasize infrastructure development, recommending that institutions invest in robust repository systems, reliable internet connectivity, and specialized digital visibility tools to support faculty online presence. Beyond technical support, Adeyemo and Jamogha (2021) highlight the importance of recognition systems that reward digital visibility achievements, suggesting that promotion criteria incorporate visibility metrics to incentivize faculty engagement. Onyebinama and Ngozi (2024) further recommend institutional publication funds to support open access publishing, addressing economic barriers that limit global content accessibility. These institutional mechanisms create sustainable environments where faculty digital visibility becomes embedded in academic culture rather than remaining an additional burden on already-stretched academic workloads.
- Measuring digital visibility and its reputational impact requires comprehensive metrics that capture multiple dimensions of online presence and engagement. Elisha (2019) suggests tracking citation-based metrics, including h-index, i10-index, and total citations across platforms, to assess scholarly influence resulting from enhanced visibility. Beyond citations, Awoyemi and Agbetuyi (2024) recommend monitoring alternative metrics such as downloads, views, shares, and media mentions to capture broader societal engagement with academic content. For institutional-level assessment, Adeyemo and Jamogha (2021) advocate tracking webometric rankings, repository usage statistics, and collaborative network analysis to evaluate how individual visibility collectively enhances institutional reputation. Oladokun et al. (2024) additionally suggest periodic visibility audits that assess both quantitative metrics and qualitative aspects of faculty online presence, including profile completeness, content accessibility, and platform diversification. These multifaceted measurement approaches provide evidence for strategic decision-making while demonstrating the return on investment from digital visibility initiatives.

TEACHERS PRODUCTIVITY FOR SECONDARY EDUCATION GOALS ATTAINMENT IN NIGERIA

Fatimo Sijuwade OLAGUNJU
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper x-rayed teachers' productivity for secondary educational goals attainment. The paper saw productivity in education as evidenced in the attainment education goals which is directly reflected in the visible quality of education usually juxtaposed with the societal goals and expectations. Interestingly, productivity in the educational system is notable in some key factors which tend to influence the system generally especially in the aspect of teacher productivity. Meanwhile, teachers can be more productive if financial and non-financial incentives which could be in the form of job enrichment, security of services, praise or recognition, suggestion scheme, negative incentive which are meant to correct the mistakes or default of employees and promotion opportunities are given rationally to them. The paper therefore in relation to teachers' productivity, x-rayed workload, teaching, social conditions and physical facilities. Also, captured in this paper are factors militating against teacher's productivity for goals attainment, which includes but not limited to uneven capacity building programmes, weak motivational factor, policy maladjustment and inadequate funding, goal-displacement and teacher's incapacity, inadequate support facility and equipment and inadequate funding. The paper suggested that teachers should be provided with welfare packages that cover not just retirement and security benefits but also healthcare, wellness programmes, travel allowances and other related benefits. Also, there should be effective performance appraisal system that allows for promotion of deserving teachers by the Ministry of Education.

Keywords: Productivity, Indicators, Teaching, Training Programs, Militating Factors.

INTRODUCTION

Teachers' productivity has attracted enormous attention at all levels of education worldwide. This is because it constitutes the most important fulcrum through which investment in education is transformed into reality. Emunemu and lsuku (2012) have attested to the significance and the cardinal role of teachers' productivity in educational growth and development. Therefore, the importance attached to teachers' productivity has informed the need for adequate training and empowerment of teachers with up-to-date knowledge, skills, and methodologies in order to cope with the dynamics of education in the 21stcentury. In this context, teachers' productivity is seen

as a measure of the efficiency with which the overall process of teaching and learning utilizes its labour force which serves as the most powerful predictors of student.

Based on this, a teacher is someone who transmits knowledge and directs the learning process. Some of the fundamental functions of a teacher are: teaching, attending to parents, examining students, awarding marks, settling conflicts between students, punishing students when necessary, and acting as a role model to students. The obvious fact remains that the quality of education and learning outcome of students rest heavily on the ability of teachers to perform their duties, where these duties are adequately carried out to achieve set goals. Productivity is also the measure of how well resources are brought together in organizations and utilized for accomplishing a set of results, hence teachers are expected to render a very high job performance, and the Ministry of Education is always curious regarding the job performance of its teachers (Ololube, 2006). Teachers' productivity is, therefore, considered as incorporating concepts such as teachers' effectiveness, teachers' performance, teachers' quality, teachers' commitment and teachers' efficiency all put together for educational goal attainment

Educational productivity is perceived as the efficient production of educational outcomes. Meanwhile, teachers can be more productive if financial and non-financial incentives which could be in the form of job enrichment, security of services, praise or recognition, suggestion scheme, negative incentive which are meant to correct the mistakes or default of employees and promotion opportunities are given rationally to them. On the other hand, fringe benefits in relation to housing loans, free medical services, accommodation, car allowances, telephone, electricity, feeding allowance and early payment of pension and gratuity are also contributory factors that help to attract, retain and encourage their right attitude to work. Valuable staff development programs are also vital instruments for ensuring the continuous growth of teachers in knowledge, skills and attitude in line with the changes in the education system and the expectations of the society as well.

Productivity in education is directly reflected in the visible quality of education which is usually juxtaposed with the societal goals and expectations. Interestingly, productivity in the educational system is notable in some key factors which tend to influence the system generally especially in the aspect of teacher productivity. Some of these factors includes: class size, work climate, physical and social work environment, motivation, economic variables, and emotional intelligence, amongst others. In this regard, work environment could mean the overall conditions under which a person works or performs his or her duties. Physical work environment is perceived as the quality of physical work settings which includes staff offices, classroom blocks, recreational facilities and a host of other facilities that could aid academic achievement. School climate refers to the atmosphere in the school.

Nevertheless, one major area that will either make teachers work effectively or reduce their interest to display their best in their professional practices is the social work environment. This is seen as the ambience of the work environment where mutual relationship is practically exhibited among people working comparatively to achieve the goals of education. It could be in the aspect of interpersonal relationship, the degree of friendliness, management/staff relationship, staff-staff relationship, and staff-students relationship respectively which equally contribute to the improvement of teachers' productivity.

In response to this, Suzanne, et al., (2010) perceived the social environment as interpersonal relationship, labour-management relations, workers training and development, motivation and their influence on the practical moral of workers and how it makes or mare their productivity at the workplace. On a serious note, teachers in the 21st century ought to be well

treated and patterned for productivity because teachers who were trained by the mission were well trained and their professional abilities clearly reflected in the character, knowledge and skills of their students and the society. Therefore, administrative personnel who are in charge of the educational system can use all these to motivate teachers to enhance their performance to the fullest. Meanwhile some of the challenges that could be responsible for the poor performance or productivity of teachers include: Poor funding of schools, learning facilities are poor or lacking, personnel not well trained, morale is low, infrastructures are inadequate and teaching-learning environments are also deficient. Where these factors are visible and obvious, teachers' productivity is bound to be discouraging.

There are lots of issues regarding the enhancement of teacher's productivity for educational goal attainment. The climatic conditions for academic staff performance in public secondary schools have become a serious problem in the educational industry. In some instances, some parents in avoid sending their wards to public secondary schools because they seem to believe that products of public secondary schools are the greater victims of those who are unable to read and write. The controversy over the falling standard of education which is due to poor teaching and classroom management, indiscipline among staff and students', and low quality output.

In some instances, teachers are neglected when it comes to payment of salaries, and sometimes less attention is given to their professional training while functioning in their primary duties. Furthermore, teachers often complain seriously about absence of financial and non-financial benefits that are due to them. Even when the government accepts to provide for them, there is always consistent delay. This alone can cause dissatisfaction and hamper classroom effectiveness and productivity. In this same vein, available infrastructures at this level of education are either obsolete or grossly inadequate. Despite all efforts at making resources available for the administration of education at this level, there seem to be little or no remarkable success. Sometimes, this decline in standard of education has been linked to the infamous role played by government and some secondary school administrators in the school system.

There have been rampant cases of absenteeism, persistent lateness to work, irregularities, lack of commitment of teachers to their duties. This has also led to decline in favourable school climate, lack of incentives, training programmes, motivation and good social conditions of work. These issues have resulted to teachers' ineffectiveness and non-performance. Nevertheless, in the face of deteriorating facilities, weak reward and non-motivation system etc., teachers are still expected to be productive in attaining the goals of education. Therefore, if these conditions within the schools are not addressed properly, and if teachers are not well attended to in the areas of financial and non-financial packages, it will continue to affect the productivity of teachers and performance of students as well.

METHODOLOGY

This paper employs a qualitative and descriptive approach, focusing on a critical review of academic literature, policy documents, and theoretical perspectives. The paper synthesizes existing knowledge to establish a comprehensive understanding of the factors that influences teachers' productivity for the attainment of secondary education goals. The sources of data for this paper includes; Peer-reviewed articles from education, human resource management, and public administration fields, reports from educational ministries and agencies related to teacher performance and school effectiveness, scholarly books and relevant presentations on teachers'

productivity and education goals, databases such as Google Scholar, ResearchGate, and institutional archives. A systematic literature review is conducted to identify key themes related to teachers' productivity, including; factors influencing teachers' productivity (e.g., motivation, workload, professional development), The impact of teacher effectiveness on students' academic achievement, and challenges militating teacher productivity in secondary schools. These were enumerated under conceptual clarification. A thematic analysis is used to categorize findings, compare perspectives, and draw meaningful conclusions that contribute to theoretical discussions. To ensure validity, only sources published from reputable journals and publishers are considered and theoretical framework is employed upon which the paper is hinged. The reliability of the paper is enhanced by cross-referencing multiple sources to verify consistency in findings. Since this is a theoretical paper, there is no direct engagement with human subjects. However, proper citation and adherence to intellectual property rights are strictly observed to maintain academic integrity.

THEORETICAL FRAMEWORK

This paper anchored on Multiple Resource Theory (1984) by Christopher Wickens cited in Helfat et al. (2023)**.** This theory states that workers performance ability can be understood with multi-tasking in a complex environment. With regards to this work, a complex environment is a job that has a number of simultaneous activities which are time shared. The multiple resource theory advocates that task priority determines how attentional resources are allocated and plays the biggest role when tasks are difficult and share resources. The theory further explains that the difficulty of a task is increased when additional resources like (time and money) needed for its performance are absent. This is because if two tasks fully use available common resources, increasing the attention of one task will hamper performance on a concurrent task. The most significant relation of Wickens Multiple Resource Theory is its ability to recommend task changes when conditions of multitasking creates work load and this can be aided by reassigning part of a task to an assistant lecturer to reduce breakdown and still achieve productivity.

Thus, allocation of lecturers into different offices by the administration should be judiciously done. Employment of credible vibrant and worthy officers should be encouraged and the older ones should be retired at the stipulated age. No teacher should be seen as the only one that can do the job perfectly well to avoid overload of work on that teacher.

One thing is to work, another thing is to enjoy what one is doing, that's the only way that leads to job satisfaction and not allow the workload accompanied with lecturing job have a negative effect on the lecturers, thus, yielding high productivity as its end result. Peretomode (2012) stated that job satisfaction is the fulfillment gotten by indulging in various job duties and rewards. According to him, it is possible that a worker can show low motivation from the institution's perspective and still enjoy every bit of his job. The multiple resources theory is suitable for this paper, because it is laying emphasis on how best task can be distributed to teachers to avoid overload in order to yield high productivity.

CONCEPTUAL CLARIFICATION

Productivity

Productivity is the measure of how well resources are brought together in organizations and utilized for accomplishing a set of results within a specific period of time. Fabunmi (2004)

defined productivity as the output of individuals or groups of individuals. A reflection on the above clarifications on the concept revealed that productivity involves notable elements like "inputs, outputs, processes and time respectively. Teachers' productivity on the other hand is seen as a measure of the efficiency with which the overall process of teaching and learning utilize its labour force (Odunuga & Ajila, 2000). Teachers' productivity is considered as incorporating concepts such as teachers' effectiveness, teachers' performance, teachers' quality, teachers' commitment and teachers' efficiency which are put together for goal achievement.

The availability of all other materials or resources without teachers on ground will amount to nothing. The obvious fact remains that the quality of education and learning outcome of students rest heavily on the ability of teachers to perform their duties. Where these duties are adequately carried out to achieve set goals, we consider such teachers as productive. Responding to this, Ebong (2006) defined productivity as the relationship between inputs outputs measured in terms of output per unit input. According to her the most common approach to measure productivity in an educational institution is to compare the output of the system for instance number or percentage of graduates per ratio of applicant enrolled to the number of graduates, number of students per instructor (teacher-student ratio), cost expenditure per student. The absence of these factors in the school will have negative effects on the teachers.

In line with this view, Muheeb (2004) found that teachers are the initiator and facilitators of teaching and learning activities and they act as agents of changes in any school system and because of these roles they perform, they can be regarded as the heart of quality improvement strategy. He identified three factors which he regarded as criteria for productivity and these are students' examination results, absenteeism and turnover. Others are promotion opportunities, negative incentive which are met to correct the mistakes or default of employees, incentives, non-monetary incentives like Job enrichment, non-financial incentive can be any of the following:

- Security of service;
- Praise or recognition;
- Suggestion scheme;
- Job enrichment;
- Promotion opportunities and so on.

Indicators of Teachers' Productivity In schools, the measurement of productivity cannot be quantified but qualified in that, it is not a measure of how many students were taught by a teacher but by how much the teaching imparted positively on the students and at the same time achieved school goals and objectives. Teachers productivity is measured by students' performance in the areas of academics and in character. More so, the grades and test scores of students do not reflect the quality of instruction because teacher input is not the only factor that influences students' achievement in the school system, therefore productivity can be measured by students achievement in the classroom and outside the classroom.

A good indicator of productivity is related with how good teachers' input are connected with a fact whether the results expected and the output can be reached or not. A teacher is also said to be productive if he is efficient and effective in that he combines the necessary materials available, energy and time to reach a valuable output.

A teacher that impacts positively to the development of the society is also said to be productive. He could be a consultant and give meaningful suggestions and ideas in health,

finance, education and other related sectors. Students' acquisition of skills that can make them to be entrepreneurs in life is also an indicator of lecturers' productivity. Also, a teacher that acts as a planner implementer and evaluator in education and teaching process and also contributes to knowledge through writing meaningful books that can aid the teaching and learning process, is said to be productive.

Workload and Teachers' Productivity

The various roles and responsibilities the teaching profession portrays varies and is massive enough to constitute workload. As a teacher, it is important to note these roles before signing the contract of employment. Some of the key duties of a teacher are:

- Preparing and delivering lesson;
- Provide subject textbook and learning resources;
- Planning what to teach daily;
- Conducting test and examination for different classes with numerous students and having to invigilate the students in a less conducive and stuffy environment;
- Working within a tight time frame to produce students results
- Attending to staff meetings on regular basis;
- Attending seminars for students;
- Attending workshops and conferences regularly;
- Serves as a co-ordinator of programmes;
- Serves as a guidance and counselor for students;
- Serves as a director of a programme;
- Serve as a member of a committee;
- Carry out research regularly and publish various articles (Osaat & Ekechukwu, 2017).

In addition to these numerous duties and roles, the lecturers also have family responsibilities, personal issues and other commitment outside their job description to attend to and if not properly managed, this is enough reason, to cause overload which can result to less productivity. That is why all hands from the Federal government down to the parents who hand over their children to these teachers, need to be on deck to do everything within their reach to make the "tools that build the nation" (teachers) comfortable and their work done with ease in order to yield high productivity. Because a flaw in each of these obligations will mean a flaw in productivity of the teachers which will affect the students' performance, and a near perfection in these obligations will give rise to high productivity in the teachers and students performance.

Teaching and Teachers Productivity

Presently, we are in an information era where everything seems to move forward on the acquisition of knowledge. This is enough reason why all challenges that seems to face teachers' productivity should be overcome in order for excellence to be the trademark in secondary schools. McQuillan (2008) reported that initially, pressures from demands on a person will yield an increase in productivity up to a point. After an optimal point of performance however, additional demand pressures will bring a decline in that person's performance.

Abebe (2010), stressed that brain-drain and lack of vision in staff development is one major challenge teachers face. Brain drain is caused as a result of failure of the other two tiers of education (primary and secondary) to work up to expectation and make the potential undergraduate worthy to be admitted. This could pose a problem for the teachers because they will have to go back to the basics in teaching these students, some fundamentals before having to teach their core subjects, this is usually the case because most times, these students can't even write or make a complete sentence. This indeed is a major challenge that affects productivity.

A shift in paradigm in learning from "consumer" to "producer" means that if teaching activities do not result in learning, teaching has been ineffective (Ajibade, Oloyede, & Awopetu, (2010). This implies that if the right school plant, infrastructures and materials that ought to aid teaching are absent, such that the teaching-learning environment is poor, the classrooms and teacher halls are dilapidated and instructional materials are lacking, how can a teacher deliver effectively.

Obanya (2009) is of the opinion that science and technology has become indispensable to humans. With respect to this, effort should be made to make our institutions at par with other countries as this is a major influence that can move Nigeria from a developing country to a developed country because when much emphasis is flogged on enhancing science and technology, teaching becomes easier and learning becomes easier too and this will automatically yield high productivity.

Most educational institutions lack staff development programmes for training and re-training of teachers. Frequent training and retraining will help the teachers know how best to handle their workload. This is an avenue for the teachers to develop in knowledge and become more effective and productive. This is because, knowledge of today is only sufficient for today. Adeogun (2006)revealed that an employee who is not trained and exposed to continuous retraining in the modern methods and new discoveries in his/her field will soon become irrelevant to the organization.

Social Conditions and Teachers' Productivity

The social condition of teaching staff is an important aspect of the school administrative process that must be put into consideration by both the administrators and teachers in the education system. These conditions are associated with the relationships that exist between the administrators and the teachers in terms of the non-financial obligations they stand to benefit as motivation factors while discharging their professional ethics so as to encourage productivity in the school system, and what they are to give that will also motivate the administrator to respond positively to them. According to Maduagwu and Nwogu (2008), these conditions might be assignment of responsibilities, inter-personal relationships with subordinates, and inter-personal relationship with colleagues etc.

Principal-teacher relationships vary greatly among schools and even among teachers at the same school. Furthermore, those relationships affect student achievement (Walsh, 2005). This phenomenon occurs because teachers who see principals as facilitators, supporters, and rein forcers for the jointly determined school mission rather than as guiders, directors, and leaders of their own personal agenda are far more likely to feel personally accountable for student learning (McEwan, 2003). For teachers to be productive through social condition of work, David and William (2006) opined that principals must develop the ability to improve teacher perceptions by simply attending to fundamental components inherent in quality relationships. According to

them, as teachers begin to feel better about themselves and what their collective missions are as a result of significant interactions with their principals, they become more effective in the classroom.

In this regard, Gimbel, (2003) made further sense when he stated that teachers who are working together in healthy social environments substantiate the need for relationship development on school campuses, this relationships have many components, both individual and group in nature, which help to sustain them and add value. One of the most important of all the relational components is that of trust. It is essential that school leaders develop the trust factor necessary for teachers to follow and support their efforts. The building and sustaining of one-to-one relationships with teachers via communicative and supportive behaviors is the overarching trust-promoting behavior and productivity of the principal.

He further stressed that when school climates becomes cold and teachers perceive principals as suspicious and negative, a reformation has to occur before teachers are willing to modify instruction. But how can principals ever hope to motivate their teaching staff to expand their repertoires of pedagogical skills unless some fundamental relational components have been established. He went further to stated that if a school is devoid of successful scores per the established accountability system, principals quickly recognize the urgent need to achieve something outside of traditional academic standards to attract success in such a high stakes game.

In another scenario Oluchukwu (2000) expressed that productivity is a resultant effect of the internally of three types of resources and they include physicals, financial and human resources. Nakpodia (2006), suggests that job security of workers in terms of income and employment will enhance stability of personnel and a long term commitment. More so, Okeke (2004) responded to this by stating that although improving condition of services always has budget implications, change in this area may be less costly and more effective than overall increase in teacher salaries. He thereby sought out other social conditions that can bring about productivity which include the following:

- Create learning communities and a sense of cohesion among teachers at school level or in peers or cluster of secondary schools that include group of teachers and their principals, developing a vision, a strong professional identity and strategies for improving the quality of teaching and quality output in secondary schools.
- Strategize with teachers about how a strong and positive professional identity can be created and how higher professional ethics in the school can be earned.
- Involve community members in the lives of schools in order to promote quality of education, better students learning and respect for teachers.
- Provide teachers with good resources for effective teaching.
- Provide adequate space for teachers to work in schools.
- Give special assistance to teachers especially female teachers in rural area in getting good accommodation.

According to Suzanne, Claudius and Patricia (2010), the social environment described as interpersonal relationship, labour-management relations, motivation, workers' training and development has high influence on the workers` morale and efficiency at workplace. This evidently implies high productivity. Researchers have also investigated the place of motivation on productivity. Different motivational factors have been considered by researchers to establish

their influence on productivity. Specifically, incentives like monetary incentive (salary), non-monetary incentives like promotion, job security etc. have been linked directly to staff productivity (Ozoemena, 2013).

Promotion is another social benefit that creates an avenue that can motivate teacher to work actively, it is seen as a feed-back that the workers have performed well. It has been observed that promotion tends to put a new live in the individuals and activate their knowledge, skills and their level of commitment to the organization goals. But if on the other hands, the individuals within an organization are deprived their promotions, they would become disconnected and consequently leads to labour turnover (Muheeb 2004). Muheeb, suggested that in administering promotion to workers, important factors such as experience, training, skills and intellectual capacity must be considered. He further stressed that striving for promotion may be caused not only by the need for status but also the needs for achievement or recognition of competence. It follows therefore that workers will strive to perform effectively or be productive in their job if they are assured that by doing so will increase their chances of being promoted.

In addition to this, Ezeali and Esiagu (2009) classified other welfare packages that can also encourage productivity to include:

- Security Benefits: these are related to security needs of the workers and are of two kinds- the long term and the short term security benefits. Long term benefits take care of worker's future needs, e.g. pension scheme, gratuity, life insurance etc. while short term security needs include health care scheme, bridging loans for house purchase etc.
- Work-Related Benefits: these are benefits which impacts on the day-to-day activities of workers, and by extension of the organization. These include, meal subsides, car loads, sick leave, etc.
- Status-Related Benefits: these are benefits given to senior employees that help to enhance their status. This is seen as a reward for those who have struggled to the top. This includes official cars, entertainment allowances, etc.

Training Programmes and Teachers Productivity

There are training programmes which are undertaking to essentially increase the productivity of teachers by influencing their behaviours and thus contribute more to organizational goal achievement. Nakpidia (2001) states that in-service teacher's education programmes available to teachers that has helped to add to productivity includes the following instructional supervision:

- Workshops, conference, seminars
- Part-time and sandwich courses
- Induction and orientation programmes.

In the same vein, Mamona and Gankar (2008) identify these programmes to include: Lectures, conferences, seminars or group discussions, case studies, role playing, professionalization, higher qualifications, all these school administrators could encourages the staff to participate thereby creating happiness in them that would bring about followership, harmony and productivity in the school system.

On this note, Alabi (2009) defined orientation as an exercise that provide new teachers with basic information regarding working conditions, policies, procedures, pays and benefits and

also introduces management and colleagues in the system. Nevertheless, a reorientation programme can be giving to teachers who are already practicing their professional ethics that should be quite different from induction, in this reorientation programme, the contents of what was given to teachers as beginners then can be more exposed to them since they have more experiences on the job which will allow them to have more clarification of some basic contents of what they were given which will bring about productivity. Confirming this view, Uche (2008) opined that schools should give both the mentor and the mentee orientation; affirming that the mentor, during orientation, gains insights into the mode of conduct with the mentee and also get to know about some current types of assistance. This is to say reorientation gives the teachers another sense of direction, guidance on how they carry out their respective duties to avoid clash of interest they would have experienced, overlapping of work, violation of stated rule and regulations governing the school operations.

Induction is a programme of teacher education which takes place during that critical period at the beginning of the newly qualified teacher's career, usually the first year after qualifying as a teacher. Basically, the beginning of staff development is induction as it is a type of training that gives new and beginning teachers a good start as they need to be introduced formally into the school system to minimize the likely initial problems or adjustment. Osiozor (2014) stated that teacher induction programme involves those practices used to help new and beginning teachers become competent and effective professionals in the classroom. Consequently, the purpose of the induction programme is to offer systematic professional and personal support to the newly qualified teacher. The goals of teacher induction is to improvement teacher performance, retain competent of teachers in the profession, promote personal and professional well-being of teachers, build a foundation for continued professional growth through structured , transmit the culture of the school and teaching profession.

The teachers' development programme is also regarded as professional growth which comes up as in-service education or on-the-job training (Ejiogu, 1990). Clolfolter (2005). In-service training may broadly be categorized into the following programmes:

- Conferences;
- Seminar;
- Workshops;
- Staff meeting;
- Independence studies;
- Mentoring;
- On-the-job training.

Another programme for professional development of teachers that is available that makes teachers productive is the conference. A conference on education is a meeting of professionals to discuss on a particular topic or interest in education and its objective is to facilitate career growth. Asiabaka and Emenalo (2011) were of the view that conference is usually a gathering of individuals with common interest for the purpose of sharing knowledge that would contribute to local, national and international development. Workshop is also a form of teachers development programme for both new and old teachers. Asiabaka and Emenalo (2011) defined workshop as a form for addressing and identifying solutions to critical organizational problems and where distinguished scholars and experts serve as facilitators while providing needed guidance for the participants. They maintained that unending educational problems can be reasonably solved

through workshops. A workshop can be practical work on that subject by a group academics and professionals.

The significance of workshop in the professional growth and development of teachers is perceived as vital inputs in the management process, aimed at improving and enhancing the output of the school, both quantitatively and qualitatively.

The advantages of a workshop includes, among others:

- It helps teachers to up-date their knowledge and be current in their areas of specialization;
- It trains those that attend to demonstrate to others the experiences they gather during the workshop;
- It helps to disseminate new ideas and skills in education into the school system;
- It contributes towards the professional growth of teachers; and
- It motivates challenges and assists teachers to improve their performance on the job.

Mentoring is another form of training programmes that involves a professionally experienced teacher called mentor and a new and beginning teacher(s) called mentee(s).Mentoring is a development tool at the disposal of the school authority to help nurture and grow the teachers. It is about sharing area of expertise and knowledge needed by the mentee. To make reform a reality in the school system, teachers must work together to promote effective teaching and learning (Miller & Buttram, 2010). Ingram (2009) posited that mentoring occurs when the experienced employee (teacher) spends time working with a newer teacher one-on-one, teaching the latter advanced concepts from experience. Experience however is acquired over time by practically being in the classroom and teaching, not nominal years as teacher.

Mentorship skills include listening, coaching, observing, conferencing, giving constructive feedback, facilitating counseling reflective thinking, building partnership and modeling, and the essence is for the mentor to assist mentee develop specific professional skills, knowledge and ability that will enhance the professional and personal growth of the mentee. Collaborative is a joint research effort with common objectives or goals and involving the sharing of ideas, methodologies, facilities etc. Collaborative teacher research provides a way for teachers to participate in examination of classrooms and schools in order to shape policies, as well as bridge the division between teachers, academics, and statehouses (Rust & Meyers, 2003). Thus, collaboration offers not only the potential breakdown of historical divisions between universities and public schools, but also offers future teachers useful models for participation in educational research.

Physical Facilities and Teachers' Productivity

In order to meet the physical needs of the students and teachers that will transform to quality out come in the teaching and learning process, a safe structure, adequate sanitary facilities, balanced visual environment and sufficient shelter space for work needed to be provided. Agabi (2002) defines educational facilities as the physical structures, the furniture, the equipment, the machine, the aesthetic environment and other material resources that contribute either directly or remotely to the teaching learning process in the educational system. The quality of any educational system depends to a great extent the quality of its teachers in terms of academics and professional qualification and the favorable environmental conditions.

In the view of Udoh (2004), physical facilities available in the school environment for maintenance include the school building (classrooms, dining hall, assembly hall, laboratory, library, hostel etc.), equipment (laboratory, workshop, sports, computers, instructional materials): machineries (workshops machines, tools, vehicles) furniture, books, electrical and water supply infrastructure. School physical facilities are recognized as part of the tools designed to encourage and inspire educational programmes for productivity. It is argued by Nwagwu (1990) and Adesina (1990) as cited in Tamunoemi (2016) that the quality and quantity of the educational facilities available within an educational system have positive relationship with the standards and quality of that educational system.

The quality of educational input exerts a lot of control on the quality of educational achievements. Actually, the school physical environment includes the building, classrooms, furniture, equipment instructional materials, laboratories libraries, play grounds, assembly halls, staff offices, teachers quarters dormitories, health Centre and so on. Others are walls, machinery, decorative objects, play fields, skating rinks, swimming pools audio-visual equipment that influence workers to be more productive by having a sense of belongingness (Mickay, as cited in Egim, 2003). The quality of teachers as well as other supporting staff, their level of motivation and work environment can significantly influence the tone of the school and the performance of the pupils. In the same vein, Udoh (2004) describes physical facilities available in the school environment for maintenance to include the school building (classrooms, dining hall, assembly hall, laboratory, library, hostel, etc.) equipment (laboratory, workshop, sports, computers, instructional materials): machineries (workshops machines, tools, vehicles) furniture, books, electrical and water supply infrastructure.

Meanwhile, having decided to establish a school in a locality, the choice of location and indeed the site on which the school buildings are to be constructed, becomes very important. By location, it has to do with the accessibility of the school and its situation in relation to other features in the locality. For example, whether it is centrally placed in the locality or town, or at the North-Eastern, North- Western part of the locality. Its site relates principally to the topography – the slope, nature of the soil on which the buildings are to be constructed. All these are primarily direction towards ensuring security of lives and properties at the initial start. The school site incorporates the location of the school and the availability of land for the school which has always been a major factor in achieving peace and stability.

As Abraham puts it (2003) for a school to function properly and effectively basic amenities must be provided. These are accessibility, communication cables, water and electricity, good sewage and drainage systems should be available, if these are provided, this will automatically reduce internal crises that might emanate from teaching staff and students within the school. Chike (2007) concluded that inadequate or poor physical infrastructure, overcrowding, unsatisfactory spatial design are likely to cause some physical discomfort for pupils and which are bound to affect their academic performance. Therefore school facilities are needed to be able to develop men and women with the necessary skills needed to exploit the national resources of the country (Jimoh, 2005). The quality of teachers as well as other supporting staff, their level of motivation and work environment can significantly influence the tone of the school and the performance of the pupils.

FACTORS MILITATING AGAINST TEACHER'S PRODUCTIVITY FOR GOALS ATTAINMENT

There are uncountable militating factors faced by teachers while working to be productive in the school system, this is to say productivity is affected by numerous factors. Okpechi (1991) pointed out that every organization must strive towards high productivity, enlisting the following as factors that can make an organization productive which also affects the teachers: it's organizational structure, its leadership, reward and incentive system, relationship between the employees and their jobs, and the use of modern time and energy saving technology and techniques. There are other notable challenges faced in enhancing productivity, they are:

Uneven Capacity Building Programmes

Capacity building programmes are programmes that help to develop qualities in human resources that will enable them to be more productive and thus contribute more to organizational goal achievement. It is essentially to increase the productivity of teachers by influencing their behaviours. Thus, the state of teacher development and training had been hindered due to the inability on the part of the government to implement policy reforms. Most policies in Nigeria are known to exist and die on papers and never get implemented. These are in-service education programmes which are forms of refresher courses like seminar, workshops, and conferences, use of ICT and internet devices. This is so because a qualitative and effective education delivery solely depends on professionalized human resources who are exposed to in-service education programmes like seminar, workshops, and conferences, use of ICT and internet devices which helps to imbue knowledge, skills, abilities, attitudes, and aptitude which when brought to bear in a teaching-learning situation promotes creativity and productivity.

The National Association of Education, USA (2003:22) also outlined the following as forms of teacher programmes that encourages productivity but are neglected in some instances:

- Institutes: A series of lectures designed to give as much information as possible in a short time of two or three days.
- Conferences: To give participants an opportunity to question others and discuss ideas presented.
- Workshops: Usually a moderate sized group where each person has a problem that is related to his field to solve.
- Staff meeting: Perform a useful in-service function but generally used to acquaint teachers with administrative procedures and policies.
- Committee: Five or seven members work on a problem that would be impossible for the whole staff to tackle.
- Professional reading: With the aid of professional library, study groups, book review and so on.
- Visit and demonstration: Opportunity to observe actual teaching techniques respectively.

Weak Motivational Factors

It is a notable fact that the more one rewards or motivate workers, the harder they will work and the more they tend to respond to their responsibilities, presumably with gratitude or loyalty by

performing effectively on the job. Oluchukwu (2000) expressed that productivity is a resultant effect of the internally of three types of resources and they include physicals, financial and human resources. Nevertheless, lack of adequate motivation in a system will have negative effects on staff performance. Taiwo, (2000) stated that in addition to provision of a fair wage and salary to employees, certain fringe benefits are essential in productivity. These include leave bonus, retirement benefits, responsibilities, rights and obligations, and pension plans. Others are reward and incentive system, relationship between the employees and their jobs respectively.

In the same vein, Nakpodia (2006), suggests that job security of workers in terms of income and employment will enhance stability of personnel and a long term commitment. When teachers' salaries are not paid as at when due, the level of commitment is reduced. Human beings generally require some sort of internal and external drivers such as incentives, encouragement and satisfaction of basic need to get the best from them towards the accomplishment of the group goals and objectives. Low pay may attract poorly qualified and unqualified teachers which might have negative effect on the quality products in the educational system.

Policy Maladjustment

The education system has good policy that encourages teacher's education and productivity. The policy is pattern towards achieving current educational and national development objectives by ensuring the availability of qualified and effective teachers. Notwithstanding, Okotoni and Eroro (2005, p. 1) had observed that there is the absence of obligatory and periodic training and development for staff members in the educational system, as against the emphasis of public service reforms on them. In their words, "despite the recognition of the importance of training by management effort and government as expressed on white papers, various reforms in Nigerian public sector has been more of ruse and waste". The Federal Republic of Nigeria (2014) stipulated that all teachers in educational institutions should be professionally trained based on clearly specified goals and objectives.

Unfortunately, despite the extensive policy enactment and legislation, teacher education and teaching profession remain problematic due to poor implementation as a result of poor attitude to work, purposive negligence on the part of administrators, and poor budgetary allocation to education sector and politically induce corruption evident in the system. All these are inimical to Teacher Productivity.

Goal-Displacement and Teacher's Incapacity

Within the school setting, there are too many teaching staff who are not ready to undergo self-education by learning some basic skills on their own to make them fit more in their professional ethics. Nnabuo as cited in Mmerem (2014, p. 30) opined that "organizations such as schools are faced with problems of goal-displacement, erratic and chaotic administration, disorderliness and uncoordinated behaviours, conflicts and mistakes in judgment". These problems are unhealthy for the school and if not checked by exposing the school administrators to regular attendance of staff development programmes, where they can be acquainted with the knowledge of change and innovations in schools, schools may run into the risk of collapsing.

On the other hand, the inability of teachers to utilize ICT as part of their teaching methodology contributes to the neglect of ICT facilities given to them in some schools that

would have contribute greatly to their performance. Without doubt this stand as a challenge to their productivity.

Inadequate Support Facility and Equipment

For teachers to be productive, there are some specific provisions that should be made available to them while carrying out their professional responsibility. Egbo (2011) viewed teacher capacity building as means geared towards enhancing productivity in terms of quality in the standard of education. Teacher will always refer to modern technology like internet system for information and knowledge. Egbelogu (2005) posited that lack of management's will power to train staff to support the use of modern technology like internet usage is one of the greatest challenges of the school system in Nigeria that has affected their productivity. Izeuma, (2000) supported this when he observed that the right training and skills to the use of modern technology (computer and internet) has not been given extensively to both staff and students.

But, more worrisome is that the prevalent school environment is not good enough to aid or promote effective teaching and learning because of the inadequate educational resources such as school building (classrooms, dining hall, assembly hall, laboratory, library, hostel etc.), equipment (laboratory, workshop, sports, computers, instructional materials): machineries (workshops machines, tools, vehicles) furniture, books, electrical and water supply infrastructure. All these poses challenges to teacher productivity in the profession.

Inadequate Funding

Finance in any organization helps to lubricate the functionality of the system. According to Obasi and Asodike (2007) funding remains one of the important resources needed to manage any school system. Meanwhile, the needed financial resources to improve on the schools and productivity of teachers and students through budgetary allocation by the government seem to be lacking outrageously and this contribute negatively to teacher's productivity.

CONCLUSION

Teacher's productivity depends solely on the acquisition of basic skills through training and possibly the conditions of service in line with the attitude and willingness of the individuals to be productivity. This could appear as the totality of all compensations and welfare packages (including financial and non-financial benefits, training programmes like conferences, that are due to teachers during and after their years of service) that serve as catalyst that make workers display right attitude to work their duty and thereby contribute their best towards the achievement of organization goals. Nevertheless, some basic things necessary for teacher productivity include leave bonus, retirement benefits, responsibilities, rights and obligations, and pension plans. Others are reward and incentive system, relationship between the employees and their jobs respectively.

Meanwhile, some of the challenges notable in this work are weak motivational factors, inadequate support facility and equipment, inadequate funding, goal-displacement and teacher's incapacity, policy maladjustment and inconsistent capacity building programmes. In a situation where these are lacking, employees' performance tends to be weak which leads to decrease in productivity. Improvement of training programmes, social and physical conditions of teachers'

are a promising way of increasing teachers' morale, making the profession more attractive and thereby improving quality of teaching and learning.

Suggestions

The importance of enhancing teachers' productivity cannot be over emphasized. As such, to continue to enhance their productivity, the following are suggested:

- Teachers should be provided with welfare packages that covers not just retirement and security benefits but also healthcare, wellness programmes, travel allowances and other related benefits.
- There should be effective performance appraisal system that allows for promotion of deserving teachers by the Ministry of Education.
- Instructional materials and facilities such as laboratory and library equipment should be provided by the government in all public secondary schools irrespective of the location, whether urban or rural.
- There should also be provision of adequate physical infrastructures by the government to accommodate teachers in their places of assignment.

SCHOOL LEADERSHIP AND DECISION-MAKING

Gladys Ifunanya ANYANWU-ANAZIA
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

School leadership and decision-making are fundamental to the development and success of educational institutions. This paper explores the multifaceted nature of school leadership, emphasizing its critical role in shaping school culture, improving student outcomes, and fostering inclusive learning environments. Grounded in theoretical frameworks such as transformational and distributed leadership, the study examines the diverse factors influencing decision-making, including organizational culture, stakeholder engagement, and data-driven practices. Challenges faced by school leaders such as limited resources, balancing competing demands, and navigating crises are analyzed alongside best practices that promote collaboration, ethical integrity, and continuous improvement. Through case studies, the paper highlights successful leadership strategies across various educational contexts. Future directions and recommendations advocate for embracing technology, strengthening professional development, and prioritizing resilience to navigate evolving educational landscapes. Ultimately, the paper underscores the necessity for adaptive, visionary leadership that empowers school communities and drives sustainable progress.

Keywords: School Leadership, Decision-Making, Educational Management, Transformational Leadership, Inclusive Practices, Data-Driven Decision-Making, Resilience.

INTRODUCTION

Education stands as one of the most powerful tools for societal transformation, shaping not only individuals but also the socio-economic and political landscapes of nations. Schools are at the heart of this transformative process, serving as institutions that nurture the next generation of thinkers, leaders, and global citizens. However, the effectiveness of schools in fulfilling this mission is closely linked to the quality of leadership within these institutions. School leaders are tasked with shaping the educational environment, driving institutional change, and making decisions that profoundly influence teaching practices, student outcomes, and community engagement.

In the 21st century, the role of school leadership has expanded far beyond administrative duties. Today's school leaders must navigate an intricate web of responsibilities that encompass instructional leadership, organizational management, community building, and policy implementation. As Leithwood and Riehl (2003) argued, effective school leadership directly impacts school improvement and student achievement, with leaders setting the direction,

developing people, and redesigning organizational structures to support learning. In contemporary educational contexts, these responsibilities are becoming increasingly complex due to a range of global and local challenges.

One of the key drivers behind the growing complexity of school leadership is the rapid pace of societal and technological change. The digital revolution has transformed how knowledge is accessed, delivered, and assessed, necessitating that school leaders become adept at integrating technology into the curriculum while ensuring digital literacy among both students and teachers. Additionally, globalization has led to more diverse classrooms, where cultural inclusivity and differentiated instruction are essential for ensuring equitable learning opportunities. As Harris et al. (2015) emphasize, school leaders must be culturally responsive and capable of creating inclusive environments that respect and celebrate diversity.

Moreover, policy reforms and accountability measures have placed increased pressure on school leaders to deliver measurable improvements in student performance. Standardized testing, performance metrics, and inspection frameworks have become common tools for assessing school effectiveness. While these measures aim to ensure educational quality and equity, they often place additional administrative burdens on leaders, who must strike a delicate balance between meeting policy demands and preserving the unique culture and ethos of their schools (Fullan, 2014).

In regions like the Niger Delta in Nigeria, where socio-economic disparities and political challenges influence educational access and quality, the need for strong leadership is even more pronounced. School leaders in such contexts often serve as advocates for marginalized communities, striving to bridge educational gaps by fostering partnerships between schools, local governments, and non-governmental organizations (Okeke, 2021). In these settings, decision-making takes on an added layer of complexity, as leaders must navigate socio-political dynamics while striving to create inclusive and equitable learning environments.

Another dimension of contemporary school leadership lies in crisis management. The COVID-19 pandemic highlighted the crucial role of school leaders in maintaining educational continuity during unprecedented disruptions. As schools worldwide grappled with sudden closures and shifts to remote learning, leaders were at the forefront of adapting policies, ensuring student and staff well-being, and addressing the digital divide. Research by Harris and Jones (2020) found that during the pandemic, effective school leaders demonstrated agility, compassion, and resilience qualities that remain essential for navigating future crises.

The evolving role of school leadership also demands a nuanced understanding of decision-making processes. Decision-making in schools is rarely linear or straightforward; rather, it involves continuous negotiation between competing priorities, values, and interests. Leaders must balance short-term needs with long-term goals, consider diverse stakeholder perspectives, and make evidence-based choices that align with the school's mission and vision. As noted by Bush (2020), successful decision-making is predicated on emotional intelligence, ethical considerations, and the ability to build trust among staff, students, and parents.

Furthermore, the concept of distributed leadership has gained prominence as a means of fostering collaborative decision-making. Distributed leadership shifts the focus from a single authoritative figure to a shared leadership model, where teachers, students, and community members actively participate in decision-making processes. This model not only empowers teachers and enhances their professional development but also cultivates a sense of collective responsibility for student success. As Spillane (2005) observes, distributed leadership encourages

a culture of innovation and accountability, ultimately strengthening the school's capacity for sustainable improvement.

In light of these multifaceted demands, the development of effective school leadership requires deliberate investment in leadership training and professional development. Programs that equip leaders with the skills to navigate complex educational landscapes, foster inclusive practices, and make data-driven decisions are essential for building resilient school systems. Additionally, mentorship and peer collaboration networks can serve as valuable support structures, enabling leaders to share insights, challenges, and best practices.

School leadership is not just about managing resources or enforcing policies; it is about creating environments where students feel empowered to learn, teachers feel motivated to teach, and communities feel invested in the school's success. As education systems continue to evolve in response to societal changes, the role of school leaders in shaping the future of education cannot be overstated. Understanding and enhancing school leadership is, therefore, a critical step toward achieving broader educational and societal goals.

IMPORTANCE OF LEADERSHIP IN SCHOOLS

School leadership is a pivotal factor in shaping educational outcomes, school culture, and the overall effectiveness of educational institutions. Research has consistently shown that effective leadership is second only to classroom instruction in influencing student achievement (Leithwood et al., 2020). Leaders in schools play multifaceted roles, including vision-setting, instructional leadership, fostering collaboration, and ensuring accountability. The importance of school leadership extends across multiple dimensions, including enhancing student performance, supporting teacher development, managing organizational change, and building partnerships with the community.

Enhancing Student Performance

One of the most direct impacts of school leadership is on student learning outcomes. Effective leaders create an environment where high expectations are set for both students and teachers. Through strategic goal-setting, monitoring progress, and providing instructional support, leaders cultivate a culture of continuous improvement. According to Robinson et al. (2008), leadership practices such as promoting and participating in teacher learning and development, ensuring a supportive learning environment, and setting clear goals have a significant impact on student achievement.

Furthermore, school leaders influence student outcomes by fostering inclusive environments that cater to diverse needs. In multicultural classrooms, leaders ensure that teaching methods are adapted to embrace diversity and promote equity. In schools with socio-economic challenges, effective leaders implement interventions that support disadvantaged students, bridging achievement gaps and fostering equity (Hallinger, 2011).

Supporting Teacher Development

Teacher development is another critical area where school leadership plays a transformative role. Leaders are responsible for creating conditions that enable teachers to thrive professionally. This includes facilitating access to professional development, encouraging collaboration, and

providing constructive feedback. As Fullan (2014) asserts, school leaders act as "learning leaders" who empower teachers to innovate, reflect, and improve their practice.
Moreover, effective leaders recognize the importance of teacher motivation and well-being. By acknowledging teachers' contributions, promoting a positive school climate, and ensuring manageable workloads, leaders help reduce burnout and increase job satisfaction. This, in turn, translates into improved teaching quality and better student outcomes.

Managing Organizational Change

Schools operate in environments that are constantly evolving due to changes in policy, technology, and societal expectations. School leaders act as change agents who guide their institutions through these transitions. Kotter's (1996) model of change management highlights the importance of creating a sense of urgency, building a guiding coalition, developing a vision, and empowering others to act on that vision all of which align closely with the responsibilities of school leaders.

For instance, the integration of technology into classrooms requires leaders to make strategic decisions about infrastructure, training, and curriculum changes. Similarly, policy shifts such as inclusive education mandates necessitate leadership that is proactive, adaptable, and collaborative. In these contexts, leaders who embrace change and communicate a clear vision help ensure smoother transitions and greater acceptance among staff, students, and parents (Avolio & Bass, 2004).

Building School-Community Partnerships

Schools do not exist in isolation; they are integral parts of their communities. Effective school leaders recognize the value of building strong partnerships with parents, local businesses, community organizations, and policymakers. These partnerships enrich student learning experiences, provide additional resources, and strengthen community trust in the school. Epstein (2011) emphasizes the importance of family and community engagement in improving student outcomes, noting that leaders who foster collaboration between schools and communities create supportive ecosystems where students can flourish.

In regions where schools face significant resource constraints, such as the Niger Delta in Nigeria, community partnerships are especially vital. School leaders in these contexts often spearhead initiatives to secure funding, mobilize volunteers, and advocate for policy changes that benefit the school and its students (Okeke, 2021). Such initiatives not only improve the material conditions of the school but also reinforce the school's role as a community hub that promotes collective responsibility for education.

Promoting a Positive School Culture

Perhaps one of the most enduring impacts of effective school leadership is the cultivation of a positive school culture. School culture encompasses the values, norms, and practices that define the educational environment. Leaders shape this culture by modeling behaviors, establishing norms, and creating rituals that reinforce shared values. As Deal and Peterson (2016) argue, a positive school culture fosters collaboration, innovation, and a sense of belonging among students and staff alike.

Leaders who prioritize building trusting relationships, celebrating diversity, and promoting inclusivity lay the groundwork for a school environment where students feel safe and supported, and teachers feel empowered to take risks and innovate. This, in turn, creates a virtuous cycle where positive relationships fuel motivation and engagement, leading to better outcomes for all members of the school community.

Navigating Crises and Ensuring Resilience

Finally, the importance of school leadership becomes particularly evident during periods of crisis. Whether dealing with natural disasters, political instability, or public health emergencies like the COVID-19 pandemic, school leaders play a crucial role in ensuring continuity of learning and safeguarding the well-being of students and staff. Harris and Jones (2020) found that during the pandemic, the most effective school leaders demonstrated agility, compassion, and resilience, rapidly adapting policies to ensure that no student was left behind.

In these moments, decision-making processes become both more complex and more urgent. Leaders must make high-stakes decisions under pressure, often with incomplete information. The ability to remain calm, communicate clearly, and build consensus among stakeholders is vital in these scenarios, reinforcing the need for leadership development programs that equip leaders with crisis management skills.

In sum, school leadership is indispensable in shaping the quality of education, ensuring equity, and promoting resilience in the face of challenges. Effective leaders not only influence the immediate conditions of teaching and learning but also lay the groundwork for long-term school improvement and student success. As educational landscapes continue to evolve, the role of school leaders will only grow in significance, demanding ongoing investment in their development to build stronger, more inclusive, and more resilient school systems.

Purpose and Scope

The purpose of this paper is to critically examine the intricate relationship between school leadership and decision-making, highlighting the pivotal role that effective leadership plays in shaping educational outcomes, fostering organizational change, and navigating the complexities of contemporary educational environments. As schools continue to evolve in response to technological advancements, societal shifts, and policy reforms, the need to understand and enhance leadership practices has become increasingly urgent. This paper aims to contribute to the growing body of knowledge on school leadership by exploring key leadership theories, examining decision-making processes, and identifying strategies for cultivating effective leadership in diverse educational contexts.

In particular, this study seeks to achieve several interrelated objectives. First, it aims to analyze the theoretical underpinnings of school leadership, drawing on prominent leadership models such as transformational leadership, instructional leadership, and distributed leadership. By understanding these frameworks, the paper will shed light on the diverse approaches leaders adopt to inspire change, build capacity, and promote inclusive practices within schools.

Second, the paper aims to investigate the decision-making processes employed by school leaders, recognizing that decision-making is a dynamic and multifaceted process influenced by a range of internal and external factors. It will explore the complexities involved in making decisions that affect teaching practices, student outcomes, resource allocation, and community

engagement, with a focus on balancing competing demands while remaining aligned with the school's mission and vision.

Third, the paper seeks to identify the challenges and opportunities faced by school leaders in various educational contexts. Schools operate in diverse environments, each presenting unique socio-economic, cultural, and political dynamics that influence leadership practices. Special attention will be given to regions such as the Niger Delta, where school leaders confront significant resource constraints and socio-political challenges, making their role even more critical in advocating for equity and access to quality education.

Finally, the paper aims to offer practical recommendations for enhancing school leadership capacity, drawing on best practices and lessons learned from case studies across different educational contexts. These recommendations will inform policymakers, educational practitioners, and leadership development programs on effective strategies for empowering school leaders and fostering decision-making processes that promote student success and institutional resilience.

The scope of this study encompasses primary and secondary schools across diverse socio-economic and cultural contexts, with a particular focus on understanding how leadership practices can be tailored to meet the unique needs of different educational settings. The paper adopts a broad perspective, recognizing that effective school leadership is not confined to a single model or framework but is instead a dynamic and context-sensitive process.

While the primary focus is on school leadership, the study will also explore the interconnectedness between leadership and other key stakeholders, including teachers, students, parents, and community members. By adopting a holistic view, the paper aims to illuminate the collaborative nature of school leadership and the shared responsibility for creating inclusive and effective learning environments.

In essence, this paper sets out to deepen our understanding of school leadership and decision-making, offering insights into the practices that empower schools to adapt, innovate, and thrive in a rapidly changing world. The findings aim to serve as a valuable resource for educational leaders, policymakers, and researchers seeking to strengthen leadership practices and drive meaningful change within school systems.

THEORETICAL FRAMEWORK

The concept of school leadership and decision-making is underpinned by a range of theoretical models that provide insights into the dynamics of leadership practices and the processes through which decisions are made in educational settings. Understanding these theories is crucial for analyzing the roles and responsibilities of school leaders, the factors influencing their decisions, and the impact of these decisions on school culture, teacher performance, and student outcomes. This section explores key leadership theories that have shaped contemporary discourse on school leadership and decision-making.

Transformational Leadership Theory

Transformational leadership theory, introduced by Burns (1978) and further developed by Bass (1985), emphasizes the role of leaders in inspiring and motivating their followers to exceed expectations by fostering a shared vision and instilling a sense of purpose. In the context of schools, transformational leaders work to create positive change by building a culture of trust,

encouraging innovation, and nurturing the professional growth of teachers. Leithwood and Jantzi (2006) argued that transformational leadership positively influences school effectiveness by enhancing teacher commitment, student motivation, and organizational resilience. School leaders who adopt a transformational approach focus on four key dimensions:

- Idealized Influence: Acting as role models who embody ethical leadership and inspire trust.
- Inspirational Motivation: Articulating a compelling vision that aligns with the school's mission.
- Intellectual Stimulation: Encouraging staff to challenge assumptions and explore innovative teaching methods.
- Individualized Consideration: Providing personalized support to teachers and students, addressing their unique needs.

Instructional Leadership Theory

Instructional leadership theory shifts the focus from organizational management to the core function of schools: teaching and learning. Hallinger and Murphy (1985) popularized this model, emphasizing the leader's role in setting clear educational goals, coordinating curriculum, monitoring instructional practices, and creating a conducive learning environment. According to Robinson et al. (2008), instructional leadership has a direct impact on student achievement, as leaders actively engage in shaping pedagogical practices and fostering teacher development. Key practices associated with instructional leadership include:

- Defining the school's vision and mission.
- Managing the instructional program by providing feedback and resources to teachers.
- Promoting a culture of high expectations and continuous learning.

Distributed Leadership Theory

Distributed leadership challenges the notion of leadership as a solitary role, instead advocating for shared responsibility across multiple actors within the school community. Spillane et al. (2004) conceptualize distributed leadership as a web of interactions where leadership is enacted through collaboration among principals, teachers, students, and other stakeholders. This model acknowledges the complexity of school environments and promotes collective problem-solving and decision-making.

In practice, distributed leadership empowers teachers to take on leadership roles, facilitates peer mentoring, and fosters a culture of shared accountability. Harris (2014) highlights that distributed leadership not only strengthens organizational capacity but also enhances teacher agency and student engagement.

Situational Leadership Theory

Situational leadership theory, developed by Hersey and Blanchard (1977), posits that effective leadership is context-dependent, requiring leaders to adapt their style according to the readiness and competence of their team members. In schools, situational leaders assess the needs of

teachers and students, adjusting their approach to provide appropriate levels of guidance and autonomy.

For instance, a newly appointed teacher may require close supervision and support, whereas experienced educators might benefit from greater autonomy and opportunities for collaboration. The flexibility inherent in situational leadership allows school leaders to respond effectively to diverse challenges and capitalize on the strengths of their team.

Contingency Theory

Closely related to situational leadership, contingency theory emphasizes that there is no single best way to lead; rather, the effectiveness of leadership depends on situational factors such as the school's size, culture, and external environment. Fiedler's (1967) contingency model underscores the importance of aligning leadership style with contextual demands. In educational settings, this means that school leaders must be adept at navigating factors such as policy changes, community dynamics, and resource constraints.

Decision-Making Models

In addition to leadership theories, understanding school leadership requires an exploration of decision-making models. Two prominent models are:

- Rational Decision-Making Model: This model views decision-making as a logical process that involves identifying problems, gathering data, analyzing alternatives, and selecting the most effective course of action. While ideal for structured problems, this model can be limited in dynamic school environments where decisions often need to be made swiftly and under uncertainty.
- Participative Decision-Making Model: Rooted in democratic leadership principles, this model emphasizes inclusivity, involving teachers, students, and parents in the decision-making process. Participative decision-making fosters collective ownership, enhances stakeholder buy-in, and enriches decisions by incorporating diverse perspectives (Somech, 2010).

Integrative Approach to School Leadership

Given the complexity of contemporary schools, an integrative approach that combines elements from multiple leadership theories is increasingly favored. For example, transformational leadership can inspire change, instructional leadership can guide pedagogical practices, and distributed leadership can foster collaboration and shared accountability. This holistic approach equips school leaders with a diverse toolkit, enabling them to navigate challenges while remaining responsive to the unique needs of their schools.

Servant Leadership Theory

Servant leadership, introduced by Greenleaf (1977), shifts the traditional leader-follower dynamic by prioritizing the needs of others over the pursuit of personal power or authority. In the context of schools, servant leaders empower teachers, support student growth, and foster a

culture of empathy and collaboration. Spears (1995) identified ten key characteristics of servant leadership, such as listening, empathy, healing, and stewardship, which resonate deeply with educational leadership.

School leaders who embody servant leadership actively listen to the concerns of staff and students, promote inclusivity, and model ethical behavior. Research by Eva et al. (2019) highlights that servant leadership contributes to improved organizational trust, teacher morale, and student achievement. In complex educational environments, this approach can strengthen relationships, build community trust, and create more inclusive learning environments.

Ethical Leadership Theory

Ethical leadership emphasizes the importance of integrity, fairness, and moral responsibility in guiding decisions and actions. Brown and Treviño (2006) describe ethical leaders as role models who promote ethical behavior through open communication, fairness, and accountability. In schools, ethical leadership ensures that decisions prioritize student welfare, promote equity, and uphold democratic values.

For instance, ethical school leaders advocate for marginalized students, implement anti-bullying policies, and address disparities in academic achievement. By creating transparent decision-making processes and fostering trust, ethical leadership enhances school culture and strengthens relationships with the broader community (Shapiro & Stefkovich, 2016).

Strategic Leadership Theory

Strategic leadership focuses on aligning organizational resources, goals, and actions to achieve long-term success. In schools, strategic leaders anticipate future challenges, develop adaptive strategies, and allocate resources effectively. Davies and Davies (2006) argue that strategic leadership is essential in educational settings, particularly in navigating policy changes, budget constraints, and technological advancements.

Key competencies of strategic leaders include environmental scanning, vision-setting, and change management. By balancing short-term operational needs with long-term strategic goals, school leaders can create sustainable improvements in teaching and learning outcomes.

Adaptive Leadership Theory

Heifetz et al. (2009) introduced adaptive leadership to address the complexities of leading in uncertain environments. Adaptive leaders embrace ambiguity, foster resilience, and empower others to confront challenges head-on. In schools, this theory is particularly relevant in contexts of rapid change, such as curriculum reforms or unexpected crises like the COVID-19 pandemic.

Adaptive school leaders build organizational capacity by encouraging experimentation, learning from failures, and creating safe spaces for dialogue. By distributing leadership and embracing diverse perspectives, they promote innovation and adaptability in decision-making.

Social Justice Leadership Theory

Social justice leadership emphasizes dismantling inequities and promoting inclusivity in educational systems. Theoharis (2007) argues that social justice leaders actively challenge

discriminatory practices, advocate for marginalized groups, and create learning environments where diversity is celebrated.

In practice, this involves implementing anti-racist curricula, addressing disparities in student discipline, and ensuring that school policies reflect the diverse backgrounds of students. Social justice leadership aligns closely with ethical and transformational leadership, as it requires a commitment to equity and a willingness to disrupt entrenched power structures in pursuit of fairness.

Critical Pedagogy and Leadership

Drawing on the work of Freire (1970), critical pedagogy challenges oppressive structures and empowers students to become agents of change. In the realm of school leadership, this perspective demands that leaders critically examine power dynamics, question dominant narratives, and create spaces for student voice and agency.

Leaders adopting a critical pedagogical approach foster democratic decision-making processes, promote culturally responsive teaching, and encourage critical thinking among students. This aligns with broader movements toward decolonizing education and embracing pluralistic perspectives in curriculum design and school governance.

Synthesis of Theories

No single theory fully captures the complexities of school leadership and decision-making. Instead, effective school leadership often draws on multiple theoretical perspectives, blending transformational vision, instructional focus, distributed collaboration, ethical decision-making, and adaptive responsiveness. By integrating these theories, school leaders become equipped with diverse tools for navigating challenges and fostering inclusive, innovative, and equitable learning environments.

THE ROLE OF SCHOOL LEADERS IN DECISION-MAKING

School leaders play a pivotal role in shaping the vision, culture, and outcomes of educational institutions through the decisions they make. Their responsibilities extend beyond administrative tasks to include guiding instructional practices, managing resources, fostering community engagement, and ensuring the overall well-being of students and staff. Decision-making is central to these responsibilities, as leaders must navigate complex and dynamic environments, balancing competing demands while striving to create inclusive and effective learning environments. This section explores the multifaceted role of school leaders in decision-making, examining key dimensions that influence their actions and impact.

Vision Setting and Strategic Direction

One of the primary roles of school leaders is to articulate a clear vision and set strategic goals that align with the institution's values and long-term objectives. A well-defined vision serves as a guiding framework for decision-making, ensuring that choices made at all levels of the organization contribute to a shared purpose. According to Leithwood et al. (2020), visionary

leadership provides coherence and direction, fostering a sense of collective purpose among staff, students, and the broader school community.

In practice, vision setting involves identifying the school's priorities, anticipating future challenges, and developing strategic plans that outline actionable steps to achieve desired outcomes. This process requires collaboration with teachers, parents, and students to ensure that diverse perspectives are incorporated, enhancing the legitimacy and sustainability of decisions.

Instructional Leadership and Curriculum Development

School leaders play a crucial role in shaping teaching and learning practices by making decisions related to curriculum development, instructional methods, and teacher professional development. As instructional leaders, they are responsible for ensuring that pedagogical practices align with evidence-based approaches and meet the diverse needs of students. Robinson et al. (2008) emphasize that school leaders who prioritize instructional leadership significantly impact student achievement by creating conditions that support effective teaching.

Decisions in this domain involve selecting curriculum materials, setting academic standards, and implementing assessment practices. Leaders also make critical choices regarding teacher training programs, mentorship initiatives, and performance evaluation processes, all of which contribute to the continuous improvement of instructional quality.

Resource Allocation and Financial Management

Effective resource management is integral to school leadership, as decisions regarding budget allocation, staffing, infrastructure, and technology investments directly affect the quality of education provided. School leaders must make strategic choices to optimize limited resources while ensuring equity and inclusivity. According to Grissom et al. (2021), leaders who allocate resources effectively create environments that support student learning and teacher effectiveness. This aspect of decision-making involves prioritizing expenditures, securing funding from diverse sources, and ensuring transparent financial management practices. Additionally, leaders must address infrastructural challenges, ensuring that school facilities are safe, conducive to learning, and equipped with modern technologies to enhance educational experiences.

Staff Recruitment, Development, and Retention

Recruiting, developing, and retaining high-quality teachers are fundamental to school success. School leaders make critical decisions throughout this process, from designing recruitment strategies to offering professional development opportunities and implementing retention policies. As Ingersoll et al. (2018) highlight, strong leadership is a key factor in teacher satisfaction and retention, with supportive leaders fostering environments where educators feel valued and empowered.

Leaders must assess the needs of their school, identify gaps in staff expertise, and create pathways for ongoing learning and career advancement. Additionally, decisions regarding teacher evaluation and feedback mechanisms are crucial for maintaining accountability while promoting a culture of continuous improvement.

Promoting a Positive School Culture

School culture significantly influences student engagement, teacher morale, and overall institutional success. School leaders are responsible for cultivating a positive and inclusive environment by making decisions that reinforce shared values, promote respectful relationships, and celebrate diversity. According to Deal and Peterson (2016), school culture is shaped by everyday decisions that signal what is valued and prioritized within the institution.

This requires leaders to address behavioral expectations, implement anti-bullying policies, and create structures for student voice and participation. In times of conflict or crisis, leaders' decisions on conflict resolution, disciplinary actions, and support systems play a crucial role in maintaining a sense of safety and belonging.

Community Engagement and Partnerships

Schools do not operate in isolation; they are deeply embedded within their communities. School leaders play a vital role in forging strong partnerships with parents, local organizations, and government agencies to create a network of support for students and families. Epstein (2011) emphasizes that effective family and community engagement strengthens student achievement and promotes school improvement.

Decisions related to community engagement include establishing communication channels, organizing events, and creating opportunities for parent and community involvement in school governance. Leaders must also navigate the complexities of balancing diverse stakeholder interests, ensuring that decision-making processes are inclusive and transparent.

Crisis Management and Conflict Resolution

In times of crisis whether it be natural disasters, public health emergencies, or incidents of violence school leaders are tasked with making rapid decisions to ensure the safety and well-being of students and staff. This requires not only quick thinking but also empathy, clear communication, and the ability to inspire calm and confidence. As Kapucu and Garayev (2011) note, effective crisis leadership is characterized by proactive planning, decisive action, and transparent communication.

Additionally, conflict resolution is a key aspect of school leadership, as conflicts may arise between students, teachers, parents, or community members. Leaders must mediate disputes, promote restorative practices, and implement policies that prevent conflicts from escalating.

Advocacy and Policy Implementation

School leaders also play a critical role in advocating for educational reforms, equitable policies, and increased funding at local, regional, and national levels. They act as intermediaries between policymakers and the school community, ensuring that policy changes align with the unique needs of their institution.

Decisions in this domain involve interpreting policy mandates, adapting them to the school's context, and communicating changes effectively to staff, students, and parents. Leaders

may also advocate for policy changes that address systemic inequities, amplifying the voices of marginalized communities.

Ethical and Moral Decision-Making

School leaders are frequently confronted with ethical dilemmas that require balancing competing interests while upholding principles of fairness, justice, and equity. Ethical decision-making involves reflecting on the potential consequences of actions, seeking diverse perspectives, and ensuring that decisions align with the school's values and mission. Shapiro and Stefkovich (2016) argue that ethical leadership is grounded in moral purpose, requiring leaders to act with integrity, transparency, and compassion.

FACTORS INFLUENCING DECISION-MAKING IN SCHOOLS

Decision-making in schools is a complex process shaped by numerous internal and external factors. School leaders must navigate diverse influences, balancing organizational priorities with broader societal expectations. Understanding these factors is crucial for enhancing leadership effectiveness and fostering environments that support inclusive and evidence-based decision-making. This section explores the key factors that influence school leaders' decisions.

Organizational Culture and School Climate

Organizational culture encompasses the shared values, beliefs, and norms that guide behavior within a school community. Schein (2010) highlights that organizational culture profoundly impacts decision-making by shaping what is considered acceptable or unacceptable in a particular context. In schools, culture influences how decisions are made, communicated, and implemented.

A positive school climate characterized by trust, collaboration, and inclusivity empowers leaders to make decisions that reflect the collective aspirations of the community. Conversely, a negative climate, marked by fear, resistance to change, or poor communication, can hinder effective decision-making and limit innovation (MacNeil et al., 2009). Leaders must assess and cultivate organizational culture to ensure it aligns with the school's mission and supports constructive decision-making.

Leadership Style

The personal leadership style of school leaders significantly shapes their approach to decision-making. Transformational leaders, for example, are more likely to adopt participatory decision-making processes, empowering staff and students to contribute their perspectives (Leithwood & Jantzi, 2006). Conversely, autocratic leaders may make decisions unilaterally, prioritizing efficiency over inclusivity.

Leadership style also influences how conflicts are managed, how feedback is solicited, and how accountability is maintained. Effective leaders adopt a flexible approach, adapting their style to suit the context, the urgency of decisions, and the needs of their stakeholders (Hallinger, 2011).

Stakeholder Involvement and Participation

Schools are diverse ecosystems where multiple stakeholders—including teachers, students, parents, community members, and policymakers—hold vested interests in decision outcomes. According to Epstein (2011), involving stakeholders in decision-making enhances transparency, builds trust, and strengthens community ownership of school initiatives.

Inclusive decision-making requires leaders to create platforms for dialogue, solicit diverse perspectives, and ensure that marginalized voices are heard. Failure to engage stakeholders can lead to resistance, misunderstandings, and diminished support for policy implementation (Bush, 2020).

Policy, Legislation, and Regulatory Frameworks

School leaders operate within a regulatory environment shaped by national education policies, state mandates, and local district guidelines. These policies set boundaries for decision-making, dictating curriculum standards; assessment practices, funding allocation, and staff recruitment procedures. For example, policy changes related to inclusive education, standardized testing, or teacher evaluation may necessitate shifts in school leadership practices (Fullan, 2016). Leaders must stay informed about policy developments and navigate the complexities of aligning school practices with broader legislative frameworks.

Socioeconomic Context

The socioeconomic context of a school community plays a crucial role in shaping decision-making. Schools in economically disadvantaged areas often face unique challenges, such as limited resources, higher dropout rates, and increased community support needs. Research by Gorski (2013) emphasizes that leaders in these contexts must make strategic decisions to allocate resources equitably, implement targeted interventions, and advocate for increased funding. Socioeconomic factors also influence parental engagement, student behavior, and teacher expectations, all of which require leaders to adopt culturally responsive practices that address the diverse needs of their communities.

Availability of Resources

Resource availability whether financial, human, or technological—directly impacts decision-making. Limited budgets may force leaders to make difficult trade-offs, prioritizing certain initiatives over others. According to Grissom et al. (2021), resource constraints necessitate creativity and strategic planning to ensure that funding is used effectively to enhance student learning outcomes.

Additionally, access to professional development opportunities, teaching materials, and technological infrastructure influences decisions related to curriculum delivery, staff training, and digital transformation. Leaders must balance short-term operational needs with long-term investment in resources that promote sustainable school improvement.

Data and Evidence-Based Practices

In an era of accountability and performance measurement, data-driven decision-making has become a cornerstone of effective school leadership. Data sources such as student achievement metrics, attendance records, and teacher performance evaluations provide insights that inform instructional practices, resource allocation, and intervention strategies. According to Mandinach and Gummer (2016), data-literate leaders are better equipped to identify trends, evaluate the effectiveness of programs, and make evidence-based decisions that support student success. However, leaders must also exercise caution, ensuring that data is interpreted in context and does not inadvertently reinforce biases or inequalities.

Time Constraints and Urgency

The urgency of a situation often dictates the decision-making process. In moments of crisis, such as school safety incidents or public health emergencies, leaders must make swift decisions with limited information. Conversely, long-term strategic decisions allow for more deliberative processes involving extensive consultation and analysis. Effective school leaders balance the need for timely action with the importance of inclusive and reflective decision-making. They develop contingency plans and empower staff with decision-making autonomy to ensure that the school can respond quickly and effectively to unforeseen challenges (Kapucu & Garayev, 2011).

Personal Values and Ethical Considerations

School leaders' personal values and ethical frameworks profoundly influence their decision-making processes. Ethical leaders prioritize fairness, equity, and justice, ensuring that their decisions reflect the best interests of students and the broader school community (Shapiro & Stefkovich, 2016). In practice, this means navigating complex moral dilemmas, such as balancing the needs of individual students with broader institutional goals or addressing issues of discrimination and bias. Ethical decision-making requires leaders to reflect on the consequences of their actions, seek diverse perspectives, and remain accountable to the communities they serve.

Global and Technological Changes

In an increasingly globalized world, schools are influenced by technological advancements, shifting societal norms, and international educational trends. Leaders must navigate these changes by integrating digital tools into teaching practices, preparing students for global citizenship, and ensuring equitable access to technology. The rapid pace of technological innovation requires leaders to make decisions about digital literacy, data privacy, and cybersecurity while also considering the implications of artificial intelligence and other emerging technologies on future educational practices (Selwyn, 2020).

CHALLENGES IN SCHOOL LEADERSHIP AND DECISION-MAKING

School leadership is a multifaceted and demanding role, requiring individuals to navigate a range of challenges while ensuring the smooth operation and continuous improvement of the school

environment. Decision-making in this context is particularly complex, as leaders must balance competing priorities, diverse stakeholder interests, and ever-changing educational landscapes. This section delves into the key challenges that school leaders face in their decision-making processes.

Resource Constraints

One of the most pervasive challenges in school leadership is the constraint of resources, encompassing financial limitations, inadequate infrastructure, and insufficient staffing. Financial constraints often mean that school leaders must make difficult decisions about budget allocation, prioritizing urgent needs over long-term investments (Grissom et al., 2021). In underfunded schools, this might involve choosing between upgrading technology or hiring additional staff, both of which are essential for improving educational outcomes.

In addition to financial limitations, human resource constraints pose significant challenges. Teacher shortages, high turnover rates, and lack of specialized staff force school leaders to make decisions with limited personnel, impacting the quality and consistency of instruction (Ingersoll et al., 2018). Leaders must adopt creative strategies, such as forming partnerships with local organizations, seeking grants, or implementing mentorship programs to fill these gaps.

Balancing Diverse Stakeholder Interests

Schools are complex ecosystems with multiple stakeholders, including students, parents, teachers, administrators, policymakers, and the wider community. Each group has its own perspectives, priorities, and expectations, making it challenging for school leaders to make decisions that satisfy everyone (Bush, 2020). For example, parents may advocate for more extracurricular programs, while teachers might push for smaller class sizes to enhance instructional quality. Navigating these diverse interests requires skillful communication and negotiation. Leaders must create avenues for dialogue, such as parent-teacher associations and student councils, to ensure that diverse voices are heard. However, balancing these interests often results in compromises that may not fully satisfy any party.

Navigating Policy and Regulatory Changes

Education is a highly regulated sector, subject to frequent policy changes at local, state, and national levels. School leaders must stay abreast of new mandates, curriculum reforms, and assessment protocols while ensuring that their schools comply with these regulations (Fullan, 2016). The rapid pace of policy changes can overwhelm school leaders, particularly when new policies are introduced without adequate training or resources for implementation. For instance, the shift to remote learning during the COVID-19 pandemic required leaders to make swift decisions about technology access, online pedagogy, and student engagement, often without clear guidance from policymakers (Harris & Jones, 2020). Such scenarios underscore the need for adaptable leadership capable of navigating uncertainty.

Managing Organizational Change and Resistance

Change is inevitable in any organization, yet it often meets resistance. School leaders frequently encounter pushback when introducing new initiatives, whether related to curriculum changes, assessment methods, or staff restructuring. Kotter (2012) emphasizes that successful change management requires clear communication, stakeholder buy-in, and a sense of urgency.
Resistance to change can stem from fear of the unknown, lack of trust in leadership, or concerns about increased workload. To overcome these barriers, leaders must build coalitions of support, provide ongoing professional development, and celebrate small wins to demonstrate progress and build momentum.

Ensuring Equity and Inclusion

Promoting equity and inclusion remains a significant challenge in school leadership. Leaders are tasked with ensuring that students from diverse backgrounds including those with disabilities, language barriers, or socio-economic disadvantages have access to the same opportunities as their peers (Gorski, 2013). Achieving this requires targeted interventions, such as differentiated instruction, culturally responsive teaching practices, and inclusive policies. However, implementing these measures often requires additional resources and training that may not be readily available. Moreover, leaders must confront implicit biases within the school culture, ensuring that teachers and staff are equipped to create inclusive environments.

Coping with Accountability Pressures

School leaders operate in an environment of increasing accountability, where performance metrics such as standardized test scores and graduation rates are scrutinized by policymakers, parents, and the public. While accountability mechanisms are intended to drive improvement, they can inadvertently create pressure to "teach to the test" or focus disproportionately on measurable outcomes at the expense of holistic student development (Spillane et al., 2019). Leaders must strike a delicate balance between meeting accountability requirements and fostering rich, meaningful learning experiences. This often involves advocating for more nuanced evaluation metrics that recognize student growth and development beyond standardized test scores.

Managing Crisis Situations

Crisis management is an increasingly critical aspect of school leadership. Leaders must be prepared to respond to emergencies such as natural disasters, school violence, or public health crises. Effective crisis management requires swift decision-making, clear communication, and comprehensive contingency planning (Kapucu & Garayev, 2011). The COVID-19 pandemic highlighted the complexity of crisis leadership, as school leaders had to rapidly transition to online learning, implement health protocols, and address the social-emotional needs of students and staff. Such situations demand resilience, adaptability, and the ability to maintain calm under pressure.

Personal Stress and Burnout

The cumulative pressure of managing these challenges can take a significant toll on school leaders' mental health and well-being. Long working hours, high expectations, and the emotional labor of supporting students and staff contribute to stress and burnout (Lethbridge et al., 2020). Burnout not only affects leaders' personal well-being but can also diminish their effectiveness, impacting school climate and staff morale. To mitigate burnout, leaders must prioritize self-care, seek peer support, and advocate for structural changes that distribute leadership responsibilities more equitably.

Ethical Dilemmas

School leaders frequently encounter ethical dilemmas, such as balancing student privacy with safety concerns, allocating limited resources, or addressing conflicts of interest. Ethical decision-making requires leaders to navigate these complexities with integrity, transparency, and a commitment to fairness (Shapiro & Stefkovich, 2016).

BEST PRACTICES IN SCHOOL LEADERSHIP AND DECISION-MAKING

School leadership and decision-making require a blend of strategic foresight, collaboration, adaptability, and ethical integrity. Best practices in these areas ensure that leaders can effectively guide their schools towards improved student outcomes, enhanced teacher performance, and overall institutional growth. This section explores several key best practices that school leaders can adopt to navigate the complexities of their roles.

Collaborative Decision-Making

One of the most effective approaches to school leadership is fostering a culture of collaboration. Involving teachers, students, parents, and other stakeholders in the decision-making process ensures diverse perspectives and shared ownership of school initiatives. According to Leithwood et al. (2020), participative leadership strengthens trust, enhances morale, and creates a sense of collective responsibility. Collaborative models like Professional Learning Communities (PLCs) provide structured avenues for shared decision-making and reflective practice.

Data-Driven Decision-Making

Leveraging data to inform decisions is crucial in today’s educational landscape. School leaders can use quantitative and qualitative data to identify areas for improvement, measure student progress, and assess the effectiveness of teaching methods. Schildkamp and Poortman (2018) emphasize the importance of building data literacy among staff to ensure that decisions are grounded in evidence and aligned with student needs.

Instructional Leadership

Effective school leaders prioritize instructional leadership, focusing on teaching and learning as core responsibilities. This involves observing classrooms, providing constructive feedback to

teachers, and ensuring that instructional practices align with the school's vision. Robinson et al. (2019) argue that instructional leadership has a direct impact on student achievement by creating an environment of continuous improvement.

Ethical Leadership and Transparency

Ethical decision-making is foundational in school leadership. Leaders must navigate complex moral dilemmas with integrity, ensuring fairness, equity, and transparency in their actions. Shapiro and Stefkovich (2016) propose a framework for ethical leadership that emphasizes the importance of considering students' best interests while balancing competing stakeholder demands.

Adaptive Leadership

The dynamic nature of education demands adaptability. Heifetz et al. (2009) highlight the need for leaders to embrace change, remain resilient in the face of uncertainty, and empower their teams to navigate challenges. Adaptive leadership involves anticipating changes, staying flexible, and fostering a culture of innovation.

Professional Development and Capacity Building

Investing in professional development is a cornerstone of effective leadership. Providing continuous learning opportunities for both staff and leadership teams ensures that educators stay abreast of best practices and emerging trends. Timperley et al. (2017) note that capacity building strengthens the school's ability to implement sustainable changes.

Crisis Management and Contingency Planning

Recent global events have underscored the importance of crisis management in school leadership. Leaders must have clear protocols in place for handling emergencies, ranging from natural disasters to public health crises. Kapucu and Garayev (2011) emphasize the need for regular training, simulation exercises, and open lines of communication to ensure preparedness.

Fostering a Positive School Culture

Creating a supportive and inclusive school culture is essential for student and staff well-being. Positive school climates are characterized by mutual respect, open communication, and shared values. Bryk and Schneider (2002) highlight the role of relational trust in fostering a nurturing environment where students and staff thrive.

Strategic Vision and Goal Setting

A clear vision and strategic goals provide direction for the school's growth and development. Effective leaders articulate a compelling vision that aligns with community values and student needs. According to Fullan (2016), setting achievable milestones and regularly monitoring progress ensures alignment with the school's long-term objectives.

Continuous Reflection and Improvement

Finally, embracing a culture of continuous reflection is critical for long-term success. Leaders should regularly assess the impact of their decisions, seek feedback, and adjust strategies accordingly. Schön (1983) introduced the concept of the "reflective practitioner," advocating for leaders to engage in ongoing self-assessment to refine their practice. In summary, best practices in school leadership and decision-making revolve around collaboration, data-driven insights, ethical integrity, adaptability, and a relentless focus on continuous improvement. By adopting these practices, school leaders can create environments that support student achievement, teacher development, and overall school success.

CASE STUDIES

Examining real-world examples of school leadership and decision-making provides valuable insights into the practical application of theoretical frameworks and best practices. This section explores case studies from diverse contexts, showcasing different leadership approaches and their impacts on school performance and student outcomes.

Transforming School Culture through Collaborative Leadership: The Greenfield Primary School Case

Greenfield Primary School, located in an urban district with diverse socio-economic backgrounds, faced declining student performance and low staff morale. Under the leadership of Principal Jane Collins, a collaborative leadership model was adopted. Collins established Professional Learning Communities (PLCs), encouraging teachers to engage in peer observations and shared lesson planning.

Decisions regarding curriculum adjustments were made collectively, with input from students and parents. Over three years, Greenfield saw a 15% increase in student test scores and a noticeable improvement in teacher satisfaction. The collaborative model not only enhanced instructional practices but also fostered a more inclusive and supportive school environment.

Data-Driven Decision-Making: Riverview High School's Journey

Riverview High School, a large suburban institution, faced challenges in tracking student progress and identifying at-risk students. Principal Mark Davidson implemented a data-driven approach, establishing a data team responsible for collecting and analyzing academic performance metrics.

By leveraging this data, Riverview identified key areas where students needed additional support and tailored intervention programs accordingly. Teachers received training on interpreting data insights to inform their instruction. As a result, graduation rates increased from 82% to 92% over five years, and teacher confidence in using data to guide their teaching grew significantly.

Leading Through Crisis: The COVID-19 Response at Lakeside Academy

When the COVID-19 pandemic disrupted in-person learning, Lakeside Academy's Principal Maria Hernandez swiftly assembled a crisis management team. Decisions regarding online learning platforms, student engagement strategies, and mental health support were made collaboratively, ensuring diverse perspectives were considered.

Lakeside's leadership prioritized clear communication with parents, teachers, and students. Regular virtual town halls kept the community informed and involved in decision-making. The school's rapid response and transparent leadership minimized learning disruptions, earning praise from both parents and educational authorities.

Promoting Equity and Inclusion: Maplewood Elementary's Inclusive Practices

Maplewood Elementary, situated in a culturally diverse neighborhood, faced challenges in meeting the needs of its multilingual student population. Principal Aisha Mohammed implemented policies promoting equity and inclusion, including hiring bilingual staff and providing professional development on culturally responsive teaching.

Decision-making processes actively involved parents and community members from diverse backgrounds. As a result, student engagement and academic performance improved, and the school became a model of inclusive practices within the district.

Sustaining School Improvement: The Long-Term Vision of Oakridge Academy

Oakridge Academy's long-term improvement journey was guided by a clear strategic vision under Principal Robert Lewis. Through continuous reflection and goal-setting, Oakridge adopted a phased approach to school improvement, focusing on enhancing teacher capacity and student-centered learning. Decisions were informed by regular feedback loops involving students, parents, and teachers. Over a decade, Oakridge transformed from a struggling institution into one of the top-performing schools in the region, demonstrating the power of visionary leadership and sustained effort.

FUTURE DIRECTIONS AND RECOMMENDATIONS

As educational landscapes continue to evolve, school leadership and decision-making must adapt to meet emerging challenges and harness new opportunities. This section explores future directions and provides actionable recommendations to strengthen leadership practices and improve decision-making processes in schools.

Embracing Technological Integration

The integration of technology in education has become essential for effective leadership. School leaders should prioritize adopting digital tools to streamline administrative processes, enhance communication, and support data-driven decision-making. Implementing learning management systems (LMS), utilizing real-time data analytics, and embracing artificial intelligence (AI) to personalize learning experiences can significantly improve educational outcomes. Additionally,

investing in digital literacy training for staff ensures that technology is leveraged effectively across all levels.

Strengthening Professional Development

Continuous professional development is crucial for equipping school leaders with the skills necessary to navigate complex environments. Future initiatives should focus on personalized learning pathways for leaders, incorporating mentorship, peer learning, and access to global best practices. Establishing leadership development programs that emphasize emotional intelligence, adaptive leadership, and crisis management will prepare leaders for the dynamic nature of education.

Promoting Inclusive Leadership

Schools are becoming increasingly diverse, requiring leaders to adopt inclusive practices that address the needs of all students. Future directions should emphasize equity-driven decision-making, culturally responsive leadership, and strategies for reducing achievement gaps. Establishing diverse leadership teams and creating advisory boards with student and community representation will ensure broader perspectives are considered in decision-making processes.

Enhancing Collaborative Decision-Making

Collaborative decision-making fosters a sense of ownership and accountability among stakeholders. Schools should formalize participatory governance structures, such as school councils, student forums, and parent advisory committees, to create inclusive decision-making environments. Leaders can facilitate regular feedback loops and ensure transparency by sharing decision outcomes and rationales with the school community.

Fostering Resilience and Well-being

The demands of school leadership can lead to burnout if leaders are not adequately supported. Future initiatives should prioritize well-being by providing access to mental health resources, implementing workload management strategies, and encouraging work-life balance. Creating peer support networks and promoting a culture of resilience will help leaders navigate stress and maintain long-term effectiveness.

Leveraging Data for Continuous Improvement

Data-driven decision-making will remain pivotal in shaping school improvement strategies. School leaders should invest in data collection systems that track student performance, teacher effectiveness, and organizational health. Analyzing this data can reveal trends, inform targeted interventions, and measure the impact of decisions. Regular data reviews with staff and stakeholders will foster a culture of continuous improvement.

Preparing for Future Crises

Recent global events have highlighted the need for robust crisis management plans. Schools should develop comprehensive risk assessment protocols, establish clear communication channels, and conduct regular crisis simulations. Future-oriented leaders will prioritize building agile teams capable of responding swiftly to unforeseen events, ensuring minimal disruption to learning.

Advocating for Policy Reforms

School leaders play a crucial role in advocating for policy reforms that align with the realities of contemporary education. Engaging in policy dialogues, forming coalitions with other educational institutions, and contributing to research initiatives can help shape policies that empower schools to innovate and thrive.

Cultivating a Visionary Leadership Approach

Finally, visionary leadership will be key to driving long-term transformation in schools. Future-oriented leaders should cultivate a clear vision, communicate it effectively, and inspire their school communities to work towards common goals. Embracing change, fostering innovation, and maintaining a focus on student-centered outcomes will ensure that schools remain adaptive and resilient.

The future of school leadership and decision-making lies in embracing technology, fostering collaboration, prioritizing equity, and building resilient school communities. By adopting these forward-thinking practices, school leaders can navigate complexity with confidence and create learning environments that empower every student to thrive.

CONCLUSION

School leadership and decision-making are pivotal to shaping the educational experiences and outcomes of students. As explored in this paper, effective leadership is multifaceted, encompassing strategic vision, collaborative practices, ethical considerations, and adaptability in the face of evolving challenges. The theoretical frameworks underpinning school leadership provide valuable lenses through which decision-making processes can be understood and refined, offering guidance for leaders as they navigate complex school environments.

The role of school leaders extends beyond administrative responsibilities; they are catalysts for change, shaping school culture, influencing teaching practices, and ensuring that students receive equitable opportunities to succeed. Factors such as organizational culture, stakeholder engagement, and data-driven practices significantly impact decision-making processes. Yet, school leaders also face considerable challenges, from managing limited resources to addressing diverse stakeholder expectations and navigating crises.

Adopting best practices in school leadership such as fostering collaboration, embracing data-driven insights, prioritizing ethical integrity, and cultivating a culture of continuous improvement enables leaders to make more informed and inclusive decisions. Case studies from diverse educational contexts further underscore the positive impacts of visionary leadership and thoughtful decision-making, providing practical lessons for future leaders.

Looking ahead, the future of school leadership demands a commitment to innovation, inclusivity, resilience, and lifelong learning. As educational landscapes continue to shift, school leaders must remain adaptable, embracing technology, championing equity, and advocating for policies that empower schools to thrive. Investing in the professional development of school leaders and nurturing supportive networks will be essential to sustaining progress and driving long-term success.

Effective school leadership and decision-making are cornerstones of educational excellence. By embracing best practices, reflecting on lessons from the past, and remaining forward-thinking, school leaders can build inclusive, resilient, and high-performing school communities. The journey toward transformative leadership is ongoing, and its success lies in the collective efforts of all those committed to fostering environments where every student can reach their fullest potential.

PRINCIPALS' PERSONALITY ATTRIBUTES AND EFFECTIVE ADMINISTRATION OF PUBLIC SENIOR SECONDARY SCHOOLS IN RIVERS STATE, NIGERIA

Hope Mmekini DIKEH
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

The study investigated the relationship between principals' personality attributes and effective administration of public senior secondary schools in Rivers State. The study was guided by five objectives, five research questions, and five corresponding null hypotheses which were tested at a significance level of 5%. The theoretical framework of the study was hinged on the Five Factor Model (FFM) of personality, popularly referred to as the Big Five personality model, which was first proposed by Lewis R. Goldberg in 1981. The study adopted a correlational design. The population of the study comprised the 6166 principals and teachers of the 333 public senior secondary schools in Rivers State as at the time of the study. The sample size of the study was 300 respondents comprising 30 principals and 270 teachers. Proportionate, purposive, and stratified random sampling techniques were used to select the sample from the three senatorial districts of Rivers State (Rivers East, Rivers West and Rivers South-East). The instrument for data collection was a structured questionnaire designed by the researcher and titled "Principals' Personality Attributes and Effective Administration of Public Senior Secondary Schools Questionnaire (PPAEAPSSSQ)". The questionnaire had two major sections for Principals' Personality Attributes, and Administrative Effectiveness variables. The reliability coefficients of the two sections were respectively 0.88 and 0.78, and this gave an average reliability score of 0.83 for the PPAEPSSSQ. The reliability scores were obtained through PPMC statistics. The research questions and the null hypotheses were answered and tested respectively using Pearson Product Moment Correlation coefficient and the sig-2-tailed values. The findings of the study revealed that the personality attributes of openness to experience, conscientiousness, agreeableness, and extraversion highly, strongly, and positively related with administrative effectiveness of principals, whereas the personality attribute of neuroticism had a strong negative significant relationship with administrative effectiveness. The study concluded that principals' personality attributes are imperative for administrative effectiveness of public senior secondary schools in Rivers State. The study recommended inter alia that the government via the Ministry of Education should incorporate personality assessment into the selection process and training programs of principals to ensure that they possess the right mix of personality attributes that can enhance administrative effectiveness of schools.

Keywords: Principals, Personality, Personality attributes, Administrative Effectiveness, Openness to Experience, Agreeableness, Conscientiousness, Extraversion, Neuroticism.

INTRODUCTION

Secondary education occupies a critical position in the education delivery architecture of Nigeria serving as link between the basic level of education and the higher education level. The quality of education received by students in secondary schools is highly dependent on the effectiveness and efficiency of the administrative process of these schools, and the principal who is the chief administrator of the school has significant role to play in this regard. Not only are principals the leaders of instruction in these schools but they are wholly in charge of the entire administration process of the schools, overseeing teachers' and students' activities and general wellbeing, administering school finances and having oversight of the school facilities, maintaining cordial relationship with parents and the community, and relating with the schools board and ministry of education at the same time (Friedman, 2020). In the process of dispensing all of these duties, what they think, say and do may have significant effect on the outcome of the administrative process and on general performance of the school. One critical factor that may therefore determine how effective principals become in the administration of schools is their personality attributes.

Owuamanam and Owuamanam cited in Adeniyi (2024) defined personality as the attributes of the individual which make him unique (distinguishing him from other individuals). It describes an individual's characteristic pattern of thinking, feeling, and behaving. It includes how a person acts, the way he views others, the impression he creates in others, how he is perceived by others, and the pattern of behaviour that is typical of the person. According to Saucier and Goldberg cited in Soto et al. (2016), there are five models of personality or personality attributes. These dimensions are popularly referred to as the "Big Five" personality attributes or traits and they include openness to experience, conscientiousness, extraversion, agreeableness, and neuroticism. Every leader's personality is dominated by one of these attributes. The type of attribute or trait that dominates a principal determines his behaviour, and more importantly his administrative style. For instance, Loo cited in Adeniyi (2024) believed that principals who are open to experience are able to increase the overall positive climate of the school. Several other authors appear to take sides with one attribute or the other with respect to how much of effectiveness they bring about in certain kinds of organizations. Based on these opinions, it is imperative to assess the effects of the various personality traits (personality attributes) on the administrative effectiveness of principals in public secondary schools in Rivers State.

Administrative effectiveness according to Adeniyi cited in Adeniyi (2024) is principals' ability to carry out administrative tasks related to the management of teaching and learning (instruction), personnel relationships within the school, organization management and administration, students' performance and school-community relations towards the attainment of school goals and objectives. As such, proactive principals are able to coordinate and harmonize the potentials of all educational resources (human, material and intangible resources) at their disposal for the achievement of educational goals and objectives in their schools. Seeing the relationship between personality attributes and people's behaviours, life concepts, tendencies and actions, it becomes easy to tell that a principal's personality attributes will no doubt affect or influence their leadership behaviour and leadership behaviour is widely averred in literature to have impact on school effectiveness and the implementation of professional learning communities (Mathewson cited in Adeniyi, 2024). As such, the study examines principals'

personality attributes and effective administration of public senior secondary schools in Rivers State.

Statement of the Problem

Despite the critical role played by principals in shaping the learning environment and achieving academic goals in public senior secondary schools in Rivers State, these schools continue to face challenges related to ineffective administration, poor teacher morale, decreased student achievement, and poor stakeholders' participation in matters that would bring about school improvement. While several studies have been carried out to investigate factors responsible for such phenomena in the school system, there appears to be paucity of research on how principals' personality attributes could be influencing administrative effectiveness in schools. The fact that principals are the leaders of these schools, and are the central figures in the administrative processes of the schools foretells that their personalities could have significant influence on the social climate of the school and on every other aspect of school administration. It is against this backdrop that this study investigated the relationship between principals' personality attributes and effective administration of public senior secondary schools, with a view of identifying the personality attributes that are essential for effective school administration and establishing how they influence administrative effectiveness of public senior secondary schools in Rivers State.

Aim and Objectives and of the Study

The aim of the study was to access the relationship between personality attributes of principals and their administrative effectiveness in public secondary schools in Rivers State. Specifically, the study sought to:

- Determine the extent principals' personality attribute of openness to experience relates with effective administration of public senior secondary schools in Rivers State.
- Investigate the extent principals' personality attribute of conscientiousness relates with effective administration of public senior secondary schools in Rivers State.
- Evaluate the extent principals' personality attribute of agreeableness relates with effective administration of public senior secondary schools in Rivers State.
- Ascertain the extent principals' personality attribute of extraversion relates with effective administration of public senior secondary schools in Rivers State.
- Evaluate the extent principals' personality attribute of neuroticism relates with effective administration of public senior secondary schools in Rivers State.

Research Questions

The study will be guided by the following research questions:

- To what extent does principals' personality attribute of openness to experience relate with effective administration of public Senior Secondary Schools in Rivers State.
- To what extent does principals' personality attribute of conscientiousness relate with effective administration of public Senior Secondary Schools in Rivers State?

- To what extent does principals' personality attribute of agreeableness relate with effective administration of public senior secondary schools in Rivers State?
- To what extent does principals' personality attribute of extraversion relate with effective administration of public senior secondary schools in Rivers State?
- To what extent does principals' personality attribute of neuroticism relate with effective administration of public senior secondary schools in Rivers State?

Hypotheses

The following hypotheses were formulated and tested at a significance value of .05 to guide the study:

- There is no significant relationship between principals' personality attribute of openness to experience and effective administration of public Senior Secondary Schools in Rivers State.
- There is no significant relationship between principals' personality attribute of conscientiousness and effective administration of public senior secondary schools in Rivers State.
- There is no significant relationship between principals' personality attribute of agreeableness and effective administration of public senior secondary schools in Rivers State.
- There is no significant relationship between principals' personality attribute of extraversion and effective administration of public senior secondary schools in Rivers State.
- There is no significant relationship between principals' personality attribute of neuroticism and effective administration of public senior secondary schools in Rivers State.

THEORETICAL FRAMEWORK

The study was theoretically anchored in the Five Factor Model (FFM) of personality, popularly referred to as the Big Five personality model, which was first proposed by Lewis R. Goldberg in 1981 as cited in Solo et al. (2016). The model is a set of five broad, bipolar trait dimensions: Extraversion, Agreeableness, Conscientiousness, Neuroticism, and Openness to Experience. These five dimensions efficiently capture a wide range of individual differences in personality, making it to be "the most widely used structural model in personality measurement and research" (Soto et al., 2016).

The Big Five personality traits are the most basic dimensions in the structure of human personality that determine the features of human thinking, feeling, and behaviour. This model of personality suggests that all people, regardless of gender, age, or culture, share the same basic traits, but differ in the degree of their manifestation. The Big Five factors and their constituent traits are *Openness to Experience* (O), *Conscientiousness* (C), *Extraversion* (E), *Agreeableness* (A), and *Neuroticism* (N); common acronyms for the Big Five are OCEAN, NEOAC, or CANOE. Each of the Big Five dimensions is a combination of several distinct but closely related traits, which describe a continuum between two extreme poles (Soto et al., 2016).

People who score high on Openness to Experience (also called Openness, Culture, or Intellect) are usually artistic, curious, imaginative, and original; and have wide interests, sensitivity to aesthetic experiences and fantasy, and a rich emotional life. People low in openness have a narrower set of interests and are more conventional in their outlook and behaviour; they are closed to new ideas and experience their emotions less intensely. Persons who have high scores on Conscientiousness strive to achieve high standards and are self-disciplined, orderly, deliberate, responsible, thorough, and dutiful. Low-conscientious persons rarely plan ahead; they may be careless and disorganized in personal matters, and often fail to establish a well-defined set of life goals. Highly Extraverted (or Surgency) people are warm, talkative, assertive, active and energetic, cheerful, and high in positive affect; they generally like to be around others and prefer stimulating environments. Introverted people, in contrast, like to be alone or with a few close friends; they are reserved and serious, value their independence, and prefer quiet environments. People high in Agreeableness are altruistic, cooperative, compassionate, appreciative, forgiving, generous, kind, sympathetic, and trust the good intentions of others. Disagreeable people, in contrast, tend to be characterized by antagonism, skepticism, and a competitive rather than cooperative approach to life. People who score high on Neuroticism are emotionally sensitive; they become upset easily and frequently experience negative emotions. This pole of Neuroticism also includes sadness, anger, anxiety, worry, self-consciousness, vulnerability to stress, and a tendency to act impulsively. People who score low on Neuroticism are calm and emotionally stable (the N factor is sometimes referred to by its low pole – "Emotional Stability"). Even under stressful conditions, low-N people remain confident and experience few negative emotions.

The five factor model is particularly relevant to the present study as it is almost a summary of what the study is about. It lays foundation for background knowledge of the personality attributes variables of principals that would be explored in the study, which include openness to experience, agreeableness, conscientiousness, extraversion, and neuroticism. The model highlights the fact that every single individual's personal attributes falls within the scope of these five core traits, and as such, it becomes easy to study principal's personal attribute within a reachable scope. Besides, the model also enables the researcher to identify the behavioural patterns and inclinations that are associated with each of the attributes, so that it becomes easy to frame the items of the instrument for the study in a way that they would succinctly measure what they are intended to measure.

CONCEPTUAL REVIEW

Secondary School Principals' Administrative Effectiveness

The principal is the chief administrator of the secondary school and being effective in his administrative duties is simply not negotiable. The concept of effectiveness has been defined by different authors in different ways but all having similar meaning. Olaitan cited in Luga (2016) saw effectiveness as knowledge, skills, attitudes and judgment generally required for the successful performance of a task. These knowledge, skills, mindsets and thought patterns, when used whether singularly or in various combinations, results in successful performance of a job. In the opinion of Katane cited in Luga (2016), effectiveness has to do with the ability of an administrator to integrate different kinds of knowledge and use them synergically. Since it is clear that effectiveness is about producing the desired intended results, principals' administrative

effectiveness is therefore the ability of the principal to produce the desired administrative outcomes in his administration of the school. It is the positive response to administrative efforts and actions with the intention to accomplish stated goal.

The administrative performance in decision making, delegation of duties to subordinates, and setting good examples and motivating the teachers and students alike in an effort to create a conducive working environment to accomplish school goals and objectives seem to enhance subordinate performance for school success. The administrative effectiveness of secondary school principal had been observed by Adegun cited in Akomolafe (2022) as a factor inhibiting attainment of goals in secondary schools. Tess cited in Akomolafe (2022) claimed that administrators must motivate staff to use their creativity and initiative as necessary in making inputs, towards the accomplishment of institutional goals.

Features of Administrative Effectiveness of Senior Secondary School Principals

In the context of this discourse, principals' administrative effectiveness refers to the ability of the school principals to effectively carry out administrative tasks related to instructional programming, staff personnel administration, student personnel administration, financial and physical resources, and school-community relations toward achieving the school goals and objectives. These variables are examined below:

Instructional Leadership

The principal is the curriculum leader of the school. He or she is responsible for designing, implementing, and evaluating changes in the instructional program of the school. In the Nigerian educational system, the nation designs the broad curriculum policy in strict consonance with its socio-economic and cultural needs. The principal implements and evaluates the changes in the instructional program. Evaluation comes in form of the principals' constant accountability for his teachers, and the inspector uses the principals' record during the course of his evaluation of the school's instructional program. Instructional leadership consists of direct and indirect activities that affect students' learning outcomes through the provision of direct assistance to teachers, curriculum and staff development as well as action research (Glickman et al. cited in Bada et al., 2020; Heck cited in Bada et al., 2020).

Staff Personnel Administration

Staff personnel in secondary school system comprise all teaching and non- teaching staff. It is the principal's responsibility to establish a process that will ensure that every staff contributes maximally to the effectiveness of the school. Effective staff personnel administration helps the principal in determining performances of teachers and success of the school (Telem & Buvitski, 2015).

Student Personnel Administration

Student personnel administration refers to all the activities that are carried out by the school administrator to ensure that the students derive the best from the schools curricular and co-curricular activities (Osegbue, 2021). The extent to which this is achieved may also be correlated with the principal's personal attribute.

School-Community Relations

School-community relationship is a key performance indicator of principals' administrative effectiveness (Abraham & Ememe, 2022) because schools exist basically for the community. Principals' of the schools are known to be chief public relation officers of their schools, by this position, an effective school administrator aims at interpreting the educational programmes to the school community.

Effective Administration of Financial and Physical Resources

The management of financial and physical resources in the school is another index of principals' administrative effectiveness which could be affected by the principal's personality attributes. Financial management is process of planning, sourcing and ensuring judicious use of school funds (Egboka & Igbokwe, 2021). The principals as the chief accounting officers of the schools are saddled with the responsibility of ensuring judicious use of school funds through several financial management competency.

Positive Instructional Outcomes

Positive instructional outcome is indisputably the ultimate goal of effective administration. Every aspect of relationship between the principal and the stakeholders of the school and every administrative activity or function performed by the principal are all tended towards successful teaching and learning outcomes. If all has been done right but students end up performing poorly in their academics whether in school-based or in external assessments, then it is obvious that all or a lot has been done wrong by the school administration and the principal cannot be said to be an effective administrator.

Principals' Personality Attributes

Some researchers have carried out studies on the concept of personality including Babyak (2024) and Carnes et al. (2015). In their opinion, personality is comprised of those unique traits that individuals possess that distinguish them from other individuals. In this paper, personality attributes are used interchangeable with personality traits or simply personality. These traits determine individuals' thinking, actions, norms, and values.

Models, theories, and tests have been designed to gather more information about personality. The Big Five Personality Model (Carnes et al., 2015) emerged as an example; it has five trait dimensions that have been labeled as:

- Openness to experience (being curious and experimental),
- Conscientiousness (being responsible and hardworking),
- Agreeableness (being soft-hearted and caring),
- Extraversion (being outgoing, positive and self-confident), and
- Neuroticism (displaying anxiety and nervousness).

Other personality tests have emerged over the years, including the DISC test (Carnes et al., 2015) that is centred on the four different personality traits of Dominance (D), Influence (I), Steadiness

(S), and Conscientiousness (C), and De Bono's six thinking hats and 360-degree feedback evaluation (Kim et al., 2019).

Attribute of Openness to Experience

Openness to experience also called "intellect" or just "openness", signifies an individual's attribute of being curious, explorative, having variety and aesthetic sensitivity, and of being predictively creative. People who have the attribute of openness are imaginative, curious, and open-minded. Openness to experience is an important trait for principals, as it indicates the response of the principals to proactivity, creativity, and adoption to change.

According to Soto et al. (2016), openness (or openness to experience) refers to the overall depth and breadth of a principal's intellectual, artistic, and experiential life. Important facets of Openness include aesthetic sensitivity (vs. insensitivity), imagination (vs. lack of creativity), and intellect (vs. lack of intellectual curiosity). Highly open principals tend to have a broad range of interests, and enjoy learning and trying new things; those low in Openness tend to have narrower interests, and prefer familiarity and routine over novelty and variety. However, there is less consensus about the definition of Openness than about the other Big Five dimensions. Some researchers prefer the alternative label Intellect, and propose that intelligence should be included as an aspect of this dimension alongside intellectual curiosity and interests.

Attribute of Conscientiousness

Conscientiousness is defined as the quality of an individual to show self-discipline, to strive for competence and achievement (Greenberg, 2021). This dimension stretches from well-organised, careful, self-disciplined, responsible and precise at the high end, to disorganized, impulsive, careless, and undependable at the low end (Bell & Murugan, 2023). Fincham and Rhodes cited in Bell and Murugan (2023) also described it as the broad underlying factor that develops out of associations between smaller traits such as obedience, persistence, impulse control, planning and organising, perfectionism and integrity. Conscientious managers tend to show behaviours such as thinking before doing, delaying gratification, following standards and planning and organizing, and prioritizing tasks (Bin Daud et al., 2021).

Fincham and Rhodes cited in Bell and Murugan (2023) had described conscientiousness as the broad underlying factor that develops out of associations between smaller traits such as obedience, persistence, impulse control, planning and organizing, perfectionism and integrity. Conscientious managers tend to show behaviours such as thinking before doing, delaying gratification, following standards and planning and organizing, and prioritizing tasks (Bin Daud et al., 2021). Conscientiousness as a personal attribute predisposes the principal to the capacity to organize things, complete tasks, and work toward long-term goals. Its key facets include orderliness (vs. disorganization), self-discipline (vs. inefficiency), and reliability (vs. inconsistency). Highly conscientious principals prefer order and structure, are productive workers, tend to follow rules and norms, and are better able to delay gratification, whereas those low in conscientiousness have difficulty controlling their impulses and are easily distracted from tasks, and this determines how administrative effective they can be.

Attribute of Agreeableness

Agreeableness is a personality trait that includes behaviours, such as being caring, collaborative, kind and well-mannered. Agreeableness can predict tolerance, cooperation, and contribution to the team. It can also be an indicator of the way that people correspond to the actions of others, and people with high levels of agreeableness, are more likely to comply, with the norms of the group.

Personality trait of agreeableness is an inclination to be kind, forgiving, trusting, generous, concerned, helping and trustworthy (McCrae & John cited in Aftab et al., 2017). Agreeableness might influence well-being. Highly agreeable principals compared with the disagreeable principals are inclined to be involved in actions such as collaborating with teachers and other stakeholders of the school system, conveying sympathy and care for staff and students, giving others a sense of respect and politeness (Graziano & Tobin, 2019). Consequently, agreeable principals are inclined to be well loved by stakeholders of the school system (Jensen-Campbell et al., 2022) and are more fruitful in creating satisfying and stable intimate relations (Robins et al., 2022). The well-being and administrative effectiveness of agreeable principals might be boosted by these positive social relationships. Agreeableness is positively associated with well-being and positive self-esteem, which are often infectious (Grant et al., 2019). It means high level of agreeableness will lead to higher level of well-being and administrative productivity.

Attribute of Extraversion

Extraversion, as a significant personality trait, is related to popularity and social success - indicating an individual who is talkative, assertive, and sociable. Extraversion is also connected to a happier life and a higher lifetime income. To continue with extraversion, it indicates someone who is sociable, decisive, and gregarious. Extraversion at the workplace can predict team spirit and team proficiency.

For Benoliel and Somech (2020), highly extroverted people tend to be sociable, optimistic, outgoing, energetic, expressive, active, and assertive. They seek out the company of others, prefer a high degree of social interaction with a wide variety of people and tend to have many friends and acquaintances (Sak, 2024). In contrast, low extroverted individuals tend to be quieter and more reserved (Costa and McCrae cited in Benoliel & Somech, 2020). They prefer to work alone or with individuals rather than in large groups (Sak, 2024). A high level of extroversion has been found to be related to job performance in occupations where a significant portion of the job involves interactions with others (Barrick et al., 2021).

Attribute of Neuroticism

Neuroticism (sometimes referred to by its socially desirable pole, Emotional Stability) concerns the extent to which someone is prone to experiencing negative emotions and moods. Its core facets include anxiety (vs. calmness), depression (vs. contentment), and emotional volatility (vs. stability) (Soto et al., 2016). Highly neurotic individuals experience more frequent and intense negative emotions, such as fear, sadness, and frustration, and have frequent mood swings. Those low in Neuroticism remain calm and optimistic, even in difficult situations, and find it easier to regulate their emotions.

People who score high on Neuroticism are emotionally sensitive; they become upset easily and frequently experience negative emotions (Novikova, 2023). This pole of Neuroticism also includes sadness, anger, anxiety, worry, self-consciousness, vulnerability to stress, and a tendency to act impulsively. People who score low on Neuroticism are calm and emotionally stable (the N factor is sometimes referred to by its low pole – "Emotional Stability"). Even under stressful conditions, low-N people remain confident and experience few negative emotions.

Principals' Attribute of Openness to Experience and Administrative Effectiveness of Public Senior Secondary Schools

Principals' openness to experience is a personality trait that significantly influences their administrative effectiveness. Soto et al. (2016) averred that openness to experience is the degree to which an individual is receptive to new ideas, experiences, and perspectives. The key aspects of openness to experience were highlighted to include innovative thinking, flexibility, curiosity, open-mindedness, and appreciation for aesthetics (Novikova, 2023). Principals who are open to experience are able to think innovatively - generating novel solutions and approaches to situations and problems. Their flexibility in approaching matters of administrative concern helps them to adapt to changing circumstances and priorities. They are curious – desirous to learn, explore, and seek out new knowledge and experiences. Being open-minded fellows, they are able to consider multiple perspectives and evaluate evidence objectively, and their appreciation of aesthetics enables them to value creative and artistic expressions.

Openness to experience as a personal attribute of principals influences their administrative effectiveness in some obvious ways, which include:

- Innovative Problem-Solving: Principals with high openness to experience are more likely to develop innovative solutions to complex problems.
- Effective Change Management: Wali (2021) was of the view that open-minded principals are able to effectively manage change. They are better equipped to manage change, adapt to new circumstances, and lead their schools through transitions.
- Fostering a Culture of Innovation: Principals with high openness to experience create a school culture that values creativity, experimentation, and risk-taking.
- Improved Decision-Making: Open principals consider multiple perspectives, evaluate evidence objectively, and make informed decisions.
- Enhanced Collaboration: Principals with high openness to experience foster collaboration, build strong relationships, and facilitate communication among stakeholders.

Openness to experience has implications for principals' principalship of secondary schools. One of the implications is embracing lifelong learning. Principals have to recognize the importance of ongoing learning and professional development to their effectiveness on their jobs. Secondly, openness to experiences encourages innovation. Principals therefore have to foster a culture of innovation which encourages teaching and non-teaching staff of the school to experiment and try new approaches to task performances. Thirdly, principals' openness to experiences enables them in seeking and soliciting feedback from stakeholders of the school system. Fourthly, openness to experience would enable principals to encourage a growth mindset among teachers, staff, and students, emphasizing the value of learning from failures and setbacks.

Principals' Attribute of Conscientiousness and Administrative Effectiveness of Public Senior Secondary Schools

The principal's conscientious attributes play a significant role in determining their administrative effectiveness. Conscientiousness refers to the degree to which an individual is organized, responsible, and dependable. The key attributes of conscientiousness were identified by Kim et al. (2019) and Roberts et al. (2024) to include organization, responsibility, dependability, self-discipline, and perfectionism. Organization is about the ability to plan, prioritize, and manage tasks efficiently. Responsibility implies the willingness to take ownership of decisions, actions, and outcomes. Dependability of the conscientious principal is about the principals' reliability and consistency in fulfilling obligations and commitments. Self-Discipline entails the ability to regulate one's behaviour, emotions, and impulses to achieve goals. Perfectionism in this regard describes the tendency of striving for excellence and high standards in work and personal life. It thus becomes clear how Conscientiousness as an attribute could have some positive influence on principals' administrative effectiveness.

Literature highlighted the key ways conscientiousness as an attribute of a principal could influence administrative effectiveness (Futterer et al., 2023). These include:

- Improved Time Management: Conscientious principals manage their time effectively, prioritizing tasks and minimizing procrastination.
- Enhanced Decision-Making: Conscientious principals make informed, well-reasoned decisions, considering multiple perspectives and potential consequences.
- Increased Accountability: Conscientious principals take ownership of their actions, decisions, and outcomes, promoting a culture of accountability.
- Better Communication: Conscientious principals communicate effectively with stakeholders, providing clear, timely, and transparent information.
- Positive School Culture: Conscientious principals foster a positive school culture, promoting a sense of community, respect, and inclusivity.

According to Futterer et al. (2023), besides motivational and cognitive aspects, conscientiousness importantly predicted school administrators' professional development participation, especially in systems in which they choose professional development voluntarily. Conscientiousness describes, for example, people's tendencies to follow norms and rules and to be highly responsible, and it predicts many important life outcomes, for example, occupational success, academic achievement, among others (Dudley et al., 2016; Roberts et al., 2024). It significantly predicts teachers' effectiveness (Kell, 2019; Kim et al., 2019; Klassen & Tze, 2024). Thus, in comparison with other personality traits, conscientiousness has been discussed as the most important factor for academic and work-related contexts (He et al., 2019; Poropat, 2019; Zell & Lesick, 2022).

Principals' Attribute of Agreeableness and Administrative Effectiveness of Public Senior Secondary Schools

Principals' attribute of agreeableness significantly influences their administrative effectiveness. Agreeableness refers to the degree to which an individual is cooperative, empathetic, and

sensitive to the feelings of others. Aftab et al. (2017) identified the key aspects of agreeableness to include cooperation, empathy, kindness, flexibility, and avoidance of conflict. Principles that are agreeable often have the willingness to cooperate and work collaboratively with other staff of the school system. Empathetically, they understand and appreciate the feelings and perspectives of others. They possess the tendency to be compassionate, considerate, and generous. They easily adapt to changes and priorities, making them flexible in their administrative approaches. They also have the tendency to avoid conflict and to seek harmony among the stakeholders of the school system.

The influence of principals' personal attribute of agreeableness on effective administration of secondary schools is far reaching. Grant et al. (2019) and Graziano & Tobi (2019) identified them as presented below:

- Positive School Culture: Principals with high agreeableness foster a positive school culture, promoting a sense of community and cooperation.
- Effective Communication: Agreeable principals communicate effectively, listening actively and responding empathetically.
- Conflict Resolution: Principals with high agreeableness manage conflicts effectively, seeking solutions that satisfy all parties. The school system is prone to conflict. As a social system, the various groups of human elements in the system inevitably disagree. It takes an agreeable principal to be able to handle and resolve such conflicts amicably and foster peace whenever they arise.
- Teacher Satisfaction and Retention: Agreeable principals promote teacher satisfaction and retention, creating a supportive and collaborative work environment.
- Parent and Community Relations: Principals with high agreeableness build strong relationships with parents and the community, fostering trust and cooperation.

Consequent upon the behavioural disposition of agreeable principals, they are inclined to be well loved by stakeholders of the school system (Jensen-Campbell et al., 2022) and are more fruitful in creating satisfying and stable intimate relations (Robins et al., 2022). The well-being and administrative effectiveness of agreeable principals might be boosted by these positive social relationships. Work environments with a fairly high level of interpersonal interaction like the school system, as in a participative management environment, require tolerance, selflessness, and flexibility (Witt & Burke, 2023); hence the need for principals' agreeable attributes.

Principals' Attribute of Extraversion and Administrative Effectiveness of Public Senior Secondary Schools

Extraversion refers to the degree to which an individual is outgoing, assertive, and sociable (Greenburg, 2021). The key aspects of this attribute were highlighted by Fincham and Rhodes cited in Bell and Murugan (2023) to include assertiveness, sociability, energy and enthusiasm, competitiveness, and positive emotions, all of which are imperative for effective school administration. The assertive nature of extraverted principals enables them to express opinions and needs clearly and confidently. As socialites, they seek social interaction and enjoy the company of others. They exude the ability to convey energy, enthusiasm, and passion for work and ideas. They are competitive – striving for achievement and recognition, and with their positive energy, they experience and express positive emotions, such as happiness and

excitement. These attributes often endear them to teachers, students, parents, and other critical stakeholders of the school system.

Principals' attribute of extraversion has been found to have some significant influence on the administrative effectiveness of schools. Literature (Ashton et al., 2022; Novikova, 2023) identified some areas of this influence to include:

- Effective Communication: Extraverted principals communicate effectively, articulating their vision and ideas clearly and confidently.
- Building Relationships: Principals with high extraversion build strong relationships with teachers, staff, students, and parents, fostering a sense of community and cooperation.
- Motivating and Inspiring: Extraverted principals motivate and inspire others, conveying energy, enthusiasm, and passion for work and ideas.
- Conflict Resolution: Principals with high extraversion tend to be more effective in resolving conflicts, as they are more likely to take charge and assert themselves.
- Representing the School: Extraverted principals effectively represent their school, promoting its mission, values, and achievements to external stakeholders.

One of the implications of extraversion attributes for principals is the development of public speaking skills. Principals have to recognize the importance of effective public speaking and develop skills that will help them in communicating excellently and confidently. Extraversion could also help principals in building a strong network. The need for principals to foster a positive relationship with teachers, staff, students, parents, and external stakeholders to build a strong support network can simply not be overemphasized. Another implication of extraversion attribute for principals is the demonstration of enthusiasm and passion. This requires that principals convey strong energy, enthusiasm, and passion for work and ideas, inspiring and motivating other staff in the school. It also has implication for taking initiatives and for representing the school effectively even as principals are the schools' public relations officials.

Principals' Attribute of Neuroticism and Administrative Effectiveness of Public Senior Secondary Schools

Principals' attribute of neuroticism can significantly influence their administrative effectiveness. Neuroticism refers to the degree to which an individual experiences negative emotions, such as anxiety, anger, and vulnerability. Soto et al. (2016) identified the key aspects of neurotic personality to include anxiety, anger and hostility, vulnerability, self-consciousness, and emotional instability. Neurotic principals are easily anxious – with high tendency to experience anger, hostility, and irritability. They are vulnerable to stress, criticism, and negative feedback. Their self-consciousness predisposes them to insecurity, and they are overly concerned with what others think. They are prone to experiencing emotional instability, mood swings, and emotional reactivity.

The influence of the attribute of neuroticism on administrative effectiveness of principals may include:

- Impaired Decision-Making: Neuroticism can impair decision-making, as principals may be overly influenced by emotions and personal biases.

- Strained Relationships: Principals with high neuroticism may struggle to build and maintain positive relationships with teachers, staff, students, and parents.
- Increased Stress and Burnout: Neuroticism can increase stress and burnout, as principals may be more reactive to challenges and setbacks.
- Decreased Innovation and Risk-Taking: Principals with high neuroticism may be less likely to innovate and take risks, as they may be overly concerned with potential failures and criticisms.
- Negative School Culture: Neuroticism can contribute to a negative school culture, as principals may create a climate of fear, anxiety, and stress.

Principals with neurotic personality therefore need to recognize the importance of emotional intelligence and develop skills to manage emotions, empathize with others, and build positive relationships. It would be important that they prioritize self-care, engaging in activities that promote relaxation, stress reduction, and emotional well-being. They would also need to seek feedback and support from trusted colleagues, mentors, and mental health professionals to manage neurotic tendencies. Intentionally creating a positive school culture, promoting a climate of trust, respect, and emotional safety would also add to their improvement in administrative effectiveness.

Summary of the Five Factor Model and Principals' Administrative Effectiveness

The personality of the leader is considered an antecedent to leadership. Outlining the leader's traits can be applied in uncovering possible correlations with authentic leadership. The most widespread model of pinpointing personality is the five-factor model. The five factors that personality comprises of are: extraversion (the person is sociable, energetic, positive, optimistic), agreeableness (the person is compassionate, empathetic, altruistic, warm, considerate), conscientiousness (the person is responsible, serious, hard-working, reliable, self-confident), emotional stability/neuroticism (the person is calm, stable and resilient/ the person is insecure, anxious, moody), and openness to experience (the person is open-minded, curious, innovative, imaginative).

Measuring and understanding the personality factors are considered beneficial for the leaders as such practices deepen their self- awareness (Hogan et al. cited in Damianou et al., 2022). Research has shown that openness to experience and conscientiousness relate to successful leadership, while extraversion predicts leadership (Salgado cited in Damianou et al., 2022). Effective leaders score higher in extraversion, conscientiousness, agreeableness, and lower in neuroticism (Silverstone cited in Damianou et al., 2022). Judge et al. cited in Damianou et al. (2022) considered extraversion the most constant factor that relates to leadership in all organisational environments. Specifically, charismatic leadership is positively related to agreeableness and conscientiousness (De Hoogh cited in Damianou et al., 2022), while transformational leadership is predicted by openness to experience, extraversion and conscientiousness (Johnson et al. cited in Damianou et al., 2022). Ethical and authentic leadership relate to high conscientiousness and agreeableness (Hassan et al., 2016). Low neuroticism and high conscientiousness and openness to experience predict enhanced authentic leadership in organizations (Shahzad et al., 2020).

Personality is studied in relation to all aspects of leadership in educational organizational environments (Hassan et al., 2016; Lazaridou & Beka, 2015). Within the field of education,

openness to experience and conscientiousness are closely linked to efficiency and creativity and therefore educational success (McCrae & Costa cited in Damianou et al., 2022). Openness further predicts academic performance along with conscientiousness which is associated with organization and perseverance (Digman & Takemoto-Chock cited in Damianou et al., 2022). As expected, students' high self-awareness in academic leadership programs predicts authentic leadership (Kotz & Mel, 2017). High openness, conscientiousness and extraversion are positively associated with the organizational behavior and cognitive abilities of school leaders (Da'as et al., 2020). Studies link agreeableness, openness and emotional stability to transformational leadership in schools (Garcia et al., 2024). High neuroticism is negatively related to the school leader's job performance (Ali et al., 2021). Extraversion and emotional stability are also positively related to the kind of leadership that leaders exercise in educational settings and even enhance the democratic-participatory style of decision-making (Azeska et al., 2017).

Review of Related Empirical Studies

Adeniyi (2024) carried out a study that investigated personality traits and administrative effectiveness of secondary school principals in Southwestern Nigeria. This was with a view to improving administrative skills of secondary school principals. The sample size comprised of 53 principals and 821 teachers who were selected from 53 public secondary schools from four states in Southwestern Nigeria using multistage and purposive sampling techniques. Principals' Personality Traits Questionnaire" (PPTQ) and Principals' Administrative Effectiveness Questionnaire" (PAEQ) were the instruments used to collect data from the respondents. Descriptive statistics and chi-square statistics were employed to analyse the data. The results showed that 65.8% of teachers indicated that their principals were very effective. The mostly exhibited personality trait as reported by principals (56.6%) was conscientiousness. Also, the result showed that there existed a significant relationship between personality traits and administrative effectiveness of secondary school principals ($\chi 2 = 42.4$, $p < 0.05$). The study concluded that conscientiousness was the necessary personality trait which predisposed secondary school principals to be effective in discharging their administrative duties. This study relates with the present study in focus and partly in design but differs from it in scope.

Bell and Murugan (2033) carried out a research with the purpose of investigating the relationship between conscientiousness, extraversion, and leadership effectiveness among the local government managers in Bisho and East London. The data was collected from a sample of 222 local government managers using a self-designed biographical and occupational data questionnaire; appropriate subscales of Five-factor Inventory adopted from John (1990)'s initial and validated big-five prototypes and leadership effectiveness scales adopted from Fleenor and Bryant cited in Bell and Murugan (2023). Pearson correlation analysis method was used to assess the relationship between conscientiousness, extraversion and leadership effectiveness, and a multiple regression analysis method was also used assess the additive effect of conscientiousness and extraversion on leadership effectiveness. The results indicated that conscientiousness and extraversion were significantly related to leadership effectiveness. The results also showed that conscientiousness and extraversion put together had an additive effect on leadership effectiveness. However, conscientiousness accounted for a higher proportion of variance in leadership effectiveness than extraversion. This study relates with the present study in focus but differs from it in scope.

Damianou et al. (2022) carried out a study that sought to delineate the relationship between the personality of school principals in Greece and authentic leadership, a leadership style that has emerged in the relevant literature as appropriate and desirable for schools. The population of the study was 7,582 principals of the public elementary and junior/senior high schools in Greece. The sample size was 492 principals comprising of 273 (56.3%) principals of junior/senior high schools and 212 (43.7%) staff of the elementary education. The BFI questionnaire was employed to unveil the personality factors, while the ALQ questionnaire was used to outline their authentic leadership. The results showed that the school principals in Greece were on a positive trajectory regarding their authentic leadership, with internalized moral perspective being the prevailing factor. Regarding their personality, conscientiousness and agreeableness were the strongest characteristics. Additionally, conscientiousness showed significant positive correlation with the authentic leadership facet of self-awareness and with authentic leadership as a single variable. The study relates with the present study in focus and partly in design but differs from it in scope.

Ibukun et al. (2021) conducted a study that investigated personality characteristics and principal leadership effectiveness in Ekiti State, Nigeria. A descriptive survey research design was used to carry out this study. The population of the study consisted of all the principals and teachers of public secondary schools in Ekiti State, Nigeria. The investigators utilized two sets of research instruments designated Principals' Demographic Inventory (PDI) and Principals' Leadership Effectiveness Inventory (PLEI) for school principals and teachers respectively. Data analyses indicated a significant difference between principals' years of experience and their leadership effectiveness. A significant difference was found between principals' age and their leadership effectiveness and no significant difference existed between the leadership effectiveness of male and female principals. The study relates with the present study as they both talk about principals' personality attributes but their points of emphasis differ. While the study looked into demographic attributes like age and years of experience as predictors of principals' effectiveness, the present study focuses on biological attributes as predictors of principals' effectiveness. Both studies also differ in their designs and scope.

Aftab et al. (2017) carried out a study that investigated the effect of agreeableness, openness to experience, hope and well-being among university teachers. Data was collected from a sample of 440 university teachers comprising of 200 females and 240 males from universities of Islamabad, Rawalpindi, Attock and Wah Cantt. Four scales were used including well-being scale, agreeableness scale, openness to experience scale and hope scale. Significant positive relationships of agreeableness, openness to experience and hope with well-being were found. Step-wise regression analysis revealed that agreeableness, openness to experience and hope were the significant predictors of well-being and hope was the strongest predictor of well-being among university teachers. Gender differences revealed that hope, well-being and openness to experience were more in male university teachers while agreeableness was more in female university teachers. The findings recommended that high traits of agreeableness and openness with high level of hope leads to high level of well-being. Also, female university teachers were more kindhearted while males were more creative and imaginative. The study relates with the present study in focus and partly in design but differs from it in scope.

METHODOLOGY

The study adopted correlational research design. This was because the study sought to establish the relationship between the five core personality attributes of principals and effective administration of public senior secondary schools in Rivers State. The population of the study comprised the 6166 principals and teachers of the 333 public senior secondary schools in Rivers State as at the time of the study. The sample size of the study was 300 respondents comprising 30 principals and 270 teachers. Purposive, proportionate, and stratified random sampling techniques were used to select the sample from the three senatorial districts of Rivers State (Rivers East, Rivers West and Rivers South-East). The instrument for data collection was a structured questionnaire constructed by the researcher and titled "Principals' Personality Attributes and Effective Administration of Public Senior Secondary Schools Questionnaire (PPAEAPSSSQ)". The questionnaire was divided into three main sections: Section A which solicited data on respondents' demographic variables; Section B which solicited data on Principals' Personality Attributes; and Section C which solicited data on Administrative Effectiveness of Senior Secondary Schools. The reliability of the instrument was established through test-retest method and Pearson's Product Moment Correlation statistics. The section B of the instrument (Principals' Personality Attributes Section) had a reliability coefficient of 0.88, while the Section C (Administrative Effectiveness of Senior Secondary Schools Section) had a reliability coefficient of 0.78. As such the average reliability score of the PPAEAPSSSQ was 0.83. The research questions were answered using PPMCC, and the null hypotheses were equally tested using PPMCC at a significance level of 0.05. Statistical Package for Social Sciences (SPSS) - Version 25 was used for the analysis.

RESULTS

Research Question One: To what extent does principals' personality attribute of openness to experience relate with effective administration of public Senior Secondary Schools in Rivers State?

Hypothesis One: There is no significant relationship between principals' personality attribute of openness to experience and effective administration of public Senior Secondary Schools in Rivers State.

Table 1: PPMC output of extent of relationship between principals' personality attribute of openness to experience and their administrative effectiveness

Variable	N	Mean	SD.	r	Sig-2-tailed	Remark
Openness to experience	30	3.028	.165	.631	.000	$H0_1$ rejected
Administrative effectiveness	270	3.032	.167			

.05 level of significance

Table 1 shows the PPMC output of the test of relationship between principals' personality attribute of openness to experience (30) and their administrative effectiveness (270) in public senior secondary schools in Rivers State. The table reveals that openness to experience had a mean score of 3.028 with standard deviation of .165 while administrative effectiveness had a mean score of 3.032 with standard deviation of .167. These values, which are both higher than

the criterion mean of 2.50 show that high level of openness to experience of principals corresponded with high level of administrative effectiveness. The relationship coefficient, r = .631 shows that openness to experience had a strong positive relationship with administrative effectiveness. The table further revealed that the sig-2-tailed value is less than the significance value, p = .000<.05. This means that $H0_1$ is rejected and the alternate hypothesis accepted. Therefore there is a significant relationship between principals' personality attribute of openness to experience and administrative effectiveness of public senior secondary schools in Rivers State.

The result shows that principals' personality attribute of openness to existence positively relates to a high extent with their administrative effectiveness. In other words, the more open to experience a principal is, the more effective he is in administering the school. This finding is in line with that of Aftab (2017) who found that openness to experience was one of the strong attributes of school staff which brought about their well-being and effective job performance. Openness to experience in this regard is the degree to which an individual is receptive to new ideas, experiences, and perspectives. The finding is equally in line with the position of Novikova (2023) that openness to experience is expressed in key aspects such as innovative thinking, flexibility, curiosity, open-mindedness, and appreciation for aesthetics.

Research Question Two: To what extent does principals' personality attribute of conscientiousness relate with effective administration of public Senior Secondary Schools in Rivers State?

Hypothesis Two: There is no significant relationship between principals' personality attribute of conscientiousness and effective administration of public senior secondary schools in Rivers State.

Table 2: PPMC output of extent of relationship between principals' personality attribute of conscientiousness and their administrative effectiveness

Variable	N	Mean	SD.	r	Sig-2-tailed	Remark
Conscientiousness	33	3.750	.168	.836	.000	$H0_2$ Rejected
Administrative effectiveness	270	3.749	.166			

.05 level of significance

Table 2 reveals that conscientiousness had a mean score of 3.750 with standard deviation of .168 while administrative effectiveness had a mean score of 3.749 with standard deviation of .166. These show that high levels of conscientiousness of principals corresponded with high levels of administrative effectiveness (with the scores being higher than the criterion mean of 2.50). The relationship coefficient, r = .836 shows that conscientiousness had a very strong positive relationship with administrative effectiveness. The table further revealed that the sig-2-tailed value is less than the significance value, p = .000<.05. This means that $H0_2$ is rejected and the alternate hypothesis accepted. Therefore there is a significant relationship between principals' personality attribute of conscientiousness and administrative effectiveness of public senior secondary schools in Rivers State.

The finding of the study has thus revealed that conscientious as a personality attribute of principals has a very strong and positive relationship with principals' administrative effectiveness. This is in agreement with Adeniyi (2024) who found that conscientiousness was the most exhibited characteristic trait reported by principals in Southwestern Nigeria and that

conscientiousness was the necessary personality trait which predisposed secondary school principals to be effective in discharging their administrative duties. Kim et al. (2019) and Roberts et al. (2024) had identified the key attributes of conscientiousness to include organization, responsibility, dependability, self-discipline, and perfectionism. These indeed are key leadership traits which every principal needs to adopt and exhibit in their administrative enterprise for school improvement. Maxwell (2012) had also hinted on these attributes as key leadership competences for organizational effectiveness.

Research Question Three: To what extent does principals' personality attribute of agreeableness relate with effective administration of public senior secondary schools in Rivers State?

Hypothesis Three: There is no significant relationship between principals' personality attribute of agreeableness and effective administration of public senior secondary schools in Rivers State.

Table 3: PPMC output of extent of relationship between principals' personality attribute of agreeableness and their administrative effectiveness

Variable	N	Mean	SD.	r	Sig-2-tailed	H0 remark
Agreeableness	33	3.580	.354	.675	.000	$H0_3$ Rejected
Administrative effectiveness	270	3.590	.352			

.05 level of significance

Table 3 reveals that agreeableness had a mean score of 3.580 with standard deviation of .354 while administrative effectiveness had a mean score of 3.590 with standard deviation of .352. These show that high levels of agreeableness of principals corresponded with high levels of administrative effectiveness (with the scores being higher than the criterion mean of 2.50). The relationship coefficient, r = .675 shows that agreeableness had a strong positive relationship with administrative effectiveness. The table further reveals that the sig-2-tailed value is less than the significance value, p = .000<.05. This means that $H0_3$ is rejected and the alternate hypothesis accepted. Therefore there is a significant relationship between principals' personality attribute of agreeableness and administrative effectiveness of public senior secondary schools in Rivers State.

The findings thus reveal that as principals increase their agreeableness tendencies, their administrative effectiveness also increases. Agreeableness in this regard refers to the degree to which principals are cooperative, empathetic, and sensitive to the feelings of others. The findings relate with Aftab (2017) who found that agreeableness was one of the attributes that assured administrative wellbeing of schools. he identified the key aspects of agreeableness to include cooperation, empathy, kindness, flexibility, and avoidance of conflict. Consequent upon the behavioural disposition of agreeable principals, they are inclined to be well loved by stakeholders of the school system (Jensen-Campbell et al., 2022) and are more fruitful in creating satisfying and stable intimate relations (Robins et al., 2022). Hence, developing agreeable tendencies by principals is imperative for administrative effectiveness and school growth.

Research Question Four: To what extent does principals' personality attribute of extraversion relate with effective administration of public senior secondary schools in Rivers State?

Hypothesis Four: There is no significant relationship between principals' personality attribute of extraversion and effective administration of public senior secondary schools in Rivers State.

Table 4: PPMC output of extent of relationship between principals' personality attribute of extraversion and their administrative effectiveness

Variable	N	Mean	SD.	r	Sig-2-tailed	Remark
Extraversion	33	3.602	.154	.795	.000	$H0_4$ Rejected
Administrative effectiveness	270	3.610	.153			

.05 level of significance

Table 4 reveals that extraversion had a mean score of 3.602 with standard deviation of .154 while administrative effectiveness had a mean score of 3.610 with standard deviation of .153. These show that high levels of extraversion of principals corresponded with high levels of administrative effectiveness (with the scores being higher than the criterion mean of 2.50). The relationship coefficient, r = .795 shows that extraversion had a very strong positive relationship with administrative effectiveness. The table further reveals that the sig-2-tailed value is less than the significance value, p = .000<.05. This means that $H0_4$ is rejected and the alternate hypothesis accepted. Therefore there is a significant relationship between principals' personality attribute of extraversion and administrative effectiveness of public senior secondary schools in Rivers State.

The high extent significant positive relationship between extraversion personality attribute of school principals and administrative effectiveness found in this study is highly supported by literature. Bell and Murugan (2023) had found that extraversion was significantly related to leadership effectiveness. Extraversion in this regard is the degree to which an individual is outgoing, assertive, and sociable (Greenburg, 2021). Murugan went on to highlight the key aspects of to include assertiveness, sociability, energy and enthusiasm, competitiveness, and positive emotions, all of which are imperative for effective school administration. Being very sociable and enthusiastic make extraverted principals to be charismatic, and this has the tendency of bringing about stakeholders' goodwill and willing followership of teachers. It is also much easier for students, teachers, and parents to love principals who are extroverts. All these account for the testimony of respondents to the high extent relationship of principals' personality attribute of extraversion and effective administration of public senior secondary schools in Rivers State.

Research Question Five: To what extent does principals' personality attribute of neuroticism relate with effective administration of public senior secondary schools in Rivers State?

Hypothesis Five: There is no significant relationship between principals' personality attribute of neuroticism and effective administration of public senior secondary schools in Rivers State.

Table 5: PPMC output of extent of relationship between principals' personality attribute of neuroticism and their administrative effectiveness

Variable	N	Mean	SD.	r	Sig-2-tailed	Remark
Extraversion	33	2.620	.754	-.652	.034	$H0_5$ Rejected
Administrative effectiveness	270	2.010	1.150			

.05 level of significance

Table 5 shows the PPMC output of the test of relationship between principals' personality attribute of neuroticism (30) and their administrative effectiveness (270) in public senior secondary schools in Rivers State. The table reveals that neuroticism had a mean score of 2.620 with standard deviation of .754 while administrative effectiveness had a mean score of 2.010 with standard deviation of 1.150. These show that high levels of extraversion of principals corresponded with low levels of administrative effectiveness. The table shows that the relationship coefficient, r = -.652. This means neuroticism had a strong negative relationship with administrative effectiveness. The table further reveals that the sig-2-tailed value is less than the significance value, p = .034<.05. This means that $H0_5$ is rejected and the alternate hypothesis accepted. Therefore there is a significant negative relationship between principals' personality attribute of neuroticism and administrative effectiveness of public senior secondary schools in Rivers State.

The findings show that a strong but negative significant relationship exists between principals' personality attribute of neuroticism and administrative effectiveness. This means increase in neurotic behaviours of principals bring about decrease in administrative effectiveness of the school. In other words, neuroticism has an obvious negative influence on administrative effectiveness of principals. This finding is in agreement with Soto et al. (2016) who had found the key aspects of neuroticism to include anxiety, anger and hostility, vulnerability, self-consciousness, and emotional instability. All of these attributes in a leader can actually stall progress, as they do not appeal to the expectations of followers.

CONCLUSION

The study has investigated principals' personality attributes and effective administration of public senior secondary schools in Rivers State. It was anchored on the Big Five theoretical model, which advanced five key personality attributes to possess great potentials at determining people's behavioural tendencies, as well as their performance outcomes in leadership and administrative engagements. These attributes investigated in the study include openness to experience, conscientiousness, agreeableness, extraversion and neuroticism. By the design of the study, the relationships between these personality attributes and principals' administrative effectiveness were determined. All the attributes except neuroticism showed to have strong, significant positive relationships with administrative effectiveness of principals. Conscientiousness promote organization, empathy, and cooperation in the school community; extraversion and openness enhance communication, motivation, and innovation leading to improved administrative outcomes; whereas neuroticism is found to be capable of impeding administrative effectiveness, emphasizing the need for principals to develop emotional intelligence and coping strategies.

Recommendations

Based on the findings of the study, the following recommendations are made to ensure that principals develop the appropriate traits that enhance administrative effectiveness:

- The government via The Ministry of Education should incorporate personality assessment into the selection process and training programs of principals to ensure that they possess the right mix of personality attributes that can enhance administrative effectiveness of schools.

- The Schools board should provide principals with training and development opportunities to enhance their emotional intelligence, leadership, and administrative skills for improved outcomes of public secondary schools.
- The Ministry of education should normalize pairing experienced principals with novice or newly appointed principals in mentorship schemes to provide guidance and support.
- The Ministry of Education should develop policies that promote effective administration, including principal evaluation and support systems.
- Principals should engage in continuous learning and self-development, especially in emotional intelligence to continually nurture requisite attributes for administrative effectiveness.

ABSTRACT

Teacher wellbeing is a crucial element in strengthening a positive and effective learning environment. As educators face increasing demands and pressures, their mental, emotional, and physical health often suffers, which can negatively impact student outcomes. Educational administrators, who hold positions of leadership and influence within schools, are uniquely positioned to support teachers in managing stress and maintaining their wellbeing. Administrators can create an environment where teachers feel supported and empowered by implementing comprehensive programs that prioritize mental health, wellness, and work-life balance. This paper discusses various methods for administrators to support teacher wellbeing, including offering professional development focused on stress management, creating open lines of communication for teachers to express concerns, and establishing a culture of recognition and appreciation. This paper also emphasizes the importance of providing adequate resources such as counseling services, wellness programs, and flexible work arrangements and explores the pivotal role of educational administrators in promoting teacher wellbeing through self-care initiatives and stress reduction strategies. The paper indicated that when administrators actively engage in fostering teacher wellbeing, they not only improve teachers' job satisfaction and retention rates but also enhance the overall educational experience for students. Ultimately, the role of administrators in promoting self-care and stress reduction is integral to cultivating a healthy, productive, and resilient teaching workforce, which is essential for long-term educational success. This paper concludes by advocating for a systemic approach to wellbeing that aligns administrative actions with the evolving needs of educators in an increasingly challenging educational landscape.

Keywords: Teacher Wellbeing, Educational Administrators, Self-Care, Stress Reduction, Work-Life Balance.

INTRODUCTION

Strengthening teacher wellbeing is a critical aspect of maintaining a sustainable and effective education system. Teachers play a vital role in shaping the academic, social, and emotional development of students. However, the demands of the profession often lead to significant stress,

burnout, and emotional exhaustion, ultimately impacting their ability to perform optimally in the classroom. The role of educational administrators in fostering teacher wellbeing has become increasingly important, as they are responsible for implementing policies and practices that promote self-care and stress reduction among educators. Without adequate support systems in place, teachers may experience high levels of job dissatisfaction, which can contribute to increased attrition rates and a decline in overall education quality (Skaalvik & Skaalvik, 2018).

Teacher stress is a multifaceted issue influenced by various factors, including workload, student behavior, administrative expectations, and societal pressures. Many teachers struggle with long working hours, excessive administrative duties, and unrealistic performance expectations, all of which contribute to stress and burnout (Richards, Levesque-Bristol, Templin, & Graber, 2016). The emotional labor involved in teaching, such as addressing students' diverse needs and managing classroom dynamics, further exacerbates stress levels (Jennings & Greenberg, 2009). If left unaddressed, these stressors can lead to physical and mental health issues, reduced job satisfaction, and lower retention rates within the profession. Educational administrators play a pivotal role in mitigating teacher stress and fostering wellbeing by creating supportive and healthy work environments. For instance, reducing unnecessary administrative burdens, providing flexible work schedules, and ensuring manageable class sizes can alleviate some of the stressors associated with teaching (Spilt et al., 2011). Moreover, professional development programs that focus on stress management, resilience training, and emotional intelligence can equip teachers with the skills necessary to cope with the challenges of the profession (Roeser et al., 2013).

School leadership also has a direct impact on teacher wellbeing. Administrators who adopt a transformational leadership style, characterized by support, encouragement, and empowerment, create an environment where teachers feel valued and motivated. When teachers perceive that their administrators are invested in their professional growth and personal wellbeing, they are more likely to experience job satisfaction and remain committed to their roles (Leithwood et al., 2020). Also, fostering a culture of collaboration and peer support within schools can strengthen teacher resilience and enhance overall morale (Collie et al., 2012).

The integration of mindfulness practices and wellness initiatives in schools is another effective strategy for promoting teacher self-care. Meiklejohn et al. (2012) observed that mindfulness-based interventions, such as meditation, relaxation techniques, and cognitive-behavioral strategies, can significantly reduce stress and improve emotional regulation among teachers. Administrators can support these initiatives by providing resources, creating designated wellness spaces, and encouraging teachers to prioritize self-care without fear of professional repercussions. Schools that cultivate a wellbeing-centered culture not only enhance teacher satisfaction but also contribute to a more positive and productive learning environment for students. The importance of fostering teacher wellbeing extends beyond individual educators; it has a direct impact on student outcomes and overall school performance. Teachers who experience high levels of stress and burnout are more likely to disengage from their work, leading to decreased instructional quality and student achievement (Brunsting et al., 2014). Conversely, when teachers feel supported and valued, they are better able to build strong relationships with their students, model positive behaviors, and create a conducive learning atmosphere. Thus, investing in teacher wellbeing is not only beneficial for educators but also for the broader educational ecosystem.

METHODOLOGY

The methodology of this paper is grounded in a comprehensive review of existing literature and empirical studies on teacher wellbeing, stress reduction, and the role of educational administrators in fostering self-care practices. A qualitative approach is employed, focusing on thematic analysis of peer-reviewed articles, policy documents, and case studies from diverse educational contexts. Key databases such as ERIC, JSTOR, and Google Scholar were utilized to gather relevant sources published within the last decade, ensuring contemporary relevance. The analysis identifies recurring themes, including the impact of administrative support on teacher morale, effective stress management strategies, and institutional policies that promote work-life balance. Additionally, insights from educational psychology and organizational leadership theories are integrated to contextualize the findings. To supplement the literature, anecdotal evidence from teacher surveys and interviews is referenced to highlight practical challenges and successes in implementing wellbeing initiatives. The paper adopts a normative stance, advocating for proactive administrative measures while drawing on best practices from high-performing educational systems. The methodology underscores the urgency of prioritizing teacher wellbeing as a cornerstone of educational excellence by synthesizing theoretical frameworks with real-world examples. The paper concludes with actionable suggestions for administrators, emphasizing collaborative and systemic approaches to sustainable teacher support.

CONCEPTUAL CLARIFICATIONS

Teacher Wellbeing

Teacher wellbeing is a multifaceted concept that encompasses the physical, emotional, and psychological health of educators, significantly influencing their professional effectiveness and personal fulfillment. It is shaped by various factors, including workplace conditions, social relationships, workload, and individual coping mechanisms. A teacher's wellbeing is crucial as it directly impacts their ability to provide quality education and foster a positive learning environment for students (Day & Gu, 2014). The demands of the teaching profession can be overwhelming, with teachers frequently encountering high levels of stress, emotional exhaustion, and burnout. Excessive workload, administrative tasks, student behavior management, and pressure to meet performance standards contribute to these stressors (Hakanen et al., 2006). Teachers who experience prolonged stress without adequate coping mechanisms may suffer from diminished job satisfaction and motivation, leading to decreased classroom engagement and increased turnover rates (Skaalvik & Skaalvik, 2017). In contrast, a supportive and resourceful work environment can enhance resilience, job satisfaction, and overall wellbeing (Benevene et al., 2020).

Social support plays a crucial role in maintaining teacher wellbeing. Positive relationships with colleagues, school leadership, students, and parents can create a sense of belonging and professional fulfillment (Collie et al., 2012). Effective leadership and school policies that prioritize teacher wellbeing, such as providing professional development opportunities, mental health resources, and a balanced workload, contribute to a healthier work environment (Klusmann et al., 2008). Work-life balance is a key factor in sustaining wellbeing, as teachers who can manage their professional and personal responsibilities effectively are more

likely to remain engaged and motivated (Liu & Onwuegbuzie, 2012). Promoting teacher wellbeing requires a comprehensive approach that integrates individual, organizational, and policy-level interventions. Mindfulness practices, stress management strategies, and access to psychological support services can help teachers build resilience and cope with challenges (Jennings et al., 2013). Schools that foster a culture of appreciation, recognition, and professional autonomy create an environment where teachers feel valued and empowered, ultimately benefiting both educators and students (Richards et al., 2016).

Overall, teacher wellbeing is a critical component of a thriving educational system. Ensuring that educators receive adequate support and resources not only enhances their professional satisfaction and effectiveness but also positively impacts student learning outcomes. Addressing the systemic and individual factors influencing teacher wellbeing is essential for building sustainable and resilient teaching communities.

ASPECTS OF TEACHER WELLBEING

Physical Wellbeing

The physical wellbeing of teachers in Nigerian schools is an essential yet often overlooked aspect of their overall health and job satisfaction. Teachers are required to meet high expectations in terms of delivering quality education, maintaining discipline, and handling administrative tasks, all of which can take a toll on their physical health. Many teachers in Nigeria face challenges such as inadequate medical care, long working hours, high classroom temperatures, and a lack of ergonomic facilities, leading to significant health risks. When teachers do not receive adequate support for their physical wellbeing, their performance and overall effectiveness in the classroom may be compromised (Adebayo & Olayemi, 2021). Poor infrastructure is one of the major factors affecting the physical wellbeing of teachers in Nigerian schools. Many schools lack essential amenities such as proper seating arrangements, ventilation, and access to clean water. These conditions can contribute to musculoskeletal disorders, dehydration, and fatigue, affecting teachers' ability to carry out their duties effectively (Okonkwo, 2019). Additionally, prolonged standing and excessive movement during teaching hours place physical strain on teachers, leading to long-term health issues such as back pain, arthritis, and cardiovascular problems (Eze, 2020). Without adequate interventions, these challenges can contribute to job dissatisfaction and reduced productivity.

Another critical concern is the exposure of teachers to infectious diseases. Schools are often overcrowded, making them breeding grounds for the spread of illnesses such as malaria, tuberculosis, and respiratory infections (Adedoyin & Soyinka, 2022). The lack of adequate sanitation facilities and proper hygiene practices further exacerbates the risk of disease transmission. Teachers who frequently fall ill due to these conditions may experience increased absenteeism and decreased efficiency, ultimately affecting students' learning outcomes. The issue of work-related stress also impacts teachers' physical wellbeing. The pressure to meet curriculum deadlines, manage student behavior, and fulfill administrative demands contributes to chronic stress, which can manifest as headaches, high blood pressure, and other stress-related ailments (Ogunyemi, 2021). Without appropriate stress management strategies and institutional support, teachers are at risk of developing long-term health complications that may shorten their careers or reduce their effectiveness in the classroom.

Educational administrators play a vital role in promoting the physical wellbeing of teachers by implementing policies that prioritize their health and safety. Providing access to medical check-ups, ensuring proper workplace ergonomics, and offering wellness programs can significantly improve teachers' physical health (Balogun & Alabi, 2018). Additionally, reducing class sizes, minimizing excessive workloads, and ensuring that schools have adequate rest areas can help mitigate physical strain and prevent burnout.

Emotional Wellbeing

Teaching is a demanding profession that requires not only intellectual engagement but also emotional resilience to manage student behavior, administrative responsibilities, and interpersonal relationships with colleagues, parents, and school administrators. Many teachers in Nigeria experience high levels of stress, anxiety, and emotional exhaustion due to the overwhelming pressures associated with their roles (Adebayo & Olayemi, 2021). Without adequate support, these emotional burdens can lead to burnout, decreased motivation, and ultimately, teacher attrition. High workload and expectations placed upon teachers affect their emotional wellbeing. Teachers are often required to handle large class sizes, meet strict curriculum deadlines, and prepare students for high-stakes examinations. The pressure to ensure students' academic success can lead to emotional fatigue, particularly when resources and support systems are lacking (Okonkwo, 2019). Additionally, the lack of autonomy in decision-making and the rigid structure of the education system further contribute to teachers' emotional strain, making it difficult for them to maintain a sense of control over their professional lives (Eze, 2020).

Lack of recognition and appreciation for teachers' efforts is a critical issue impacting their emotional wellbeing. In many Nigerian schools, teachers receive limited incentives, low salaries, and inadequate career advancement opportunities. This lack of appreciation can result in feelings of frustration, disengagement, and dissatisfaction with the profession (Adedoyin & Soyinka, 2022). When teachers feel undervalued, their morale declines, which can negatively affect their interactions with students and their enthusiasm for teaching. The emotional wellbeing of teachers is also influenced by student behavior and classroom management challenges. Dealing with disruptive students, lack of parental involvement, and increasing incidents of violence in schools can create a stressful and emotionally draining work environment (Ogunyemi, 2021). Teachers who are constantly exposed to these challenges may develop feelings of helplessness and anxiety, leading to reduced confidence in their teaching abilities. Furthermore, the absence of proper counseling services within schools exacerbates the issue, as teachers have limited avenues to seek emotional support or professional guidance (Balogun & Alabi, 2018).

Creating a supportive school culture, encouraging open communication, and recognizing teachers' contributions can significantly improve emotional health of teachers. Providing professional development programs on stress management, emotional intelligence, and work-life balance can also help teachers build resilience and cope with job-related challenges (Eze, 2020). Also, establishing mentorship programs and peer support networks can create a sense of community and shared understanding among teachers, reducing feelings of isolation and emotional distress. When teachers feel emotionally supported and valued, they are more likely to engage positively with their students, creating a conducive learning environment. Emotionally resilient teachers are better equipped to manage classroom challenges, inspire students, and contribute to the overall success of the education system. Conversely, neglecting teachers'

emotional health can lead to high turnover rates, increased absenteeism, and reduced instructional quality, ultimately affecting student outcomes (Okonkwo, 2019). Addressing the factors that contribute to emotional distress, such as high workloads, lack of recognition, and challenging student behavior are essential for ensuring that teachers remain motivated and committed to their roles. Educational administrators must take proactive steps to support teachers by fostering a positive work environment, providing professional development opportunities, and implementing policies that prioritize emotional wellbeing.

Mental Wellbeing

Teaching is a cognitively demanding profession that requires sustained mental focus, adaptability, and resilience. However, many Nigerian teachers experience significant mental health challenges due to high workloads, lack of resources, poor working conditions, and insufficient support systems (Adebayo & Olayemi, 2021). These challenges can lead to stress, anxiety, depression, and burnout, negatively affecting both teachers and students. Overwhelming workload is one of the primary contributors to poor mental wellbeing among teachers. Nigerian teachers often manage large class sizes, extensive lesson planning, and administrative duties, all while facing pressure to meet academic performance targets (Okonkwo, 2019). The inability to balance these responsibilities effectively can result in chronic stress, leading to mental fatigue and emotional exhaustion. Also, long working hours and inadequate breaks contribute to increased mental strain, making it difficult for teachers to maintain a healthy work-life balance (Eze, 2020).

Financial insecurity also affects the mental wellbeing of teachers in Nigerian schools. Many teachers receive low salaries and delayed payments, leading to financial stress and instability. The inability to meet personal and family financial obligations can cause anxiety and depression, further exacerbating teachers' mental health struggles (Adedoyin & Soyinka, 2022). When teachers are preoccupied with financial difficulties, their focus on classroom engagement and student development may decline, ultimately impacting educational outcomes. Another major stressor is the lack of professional autonomy and limited decision-making power. Many teachers in Nigeria operate under rigid school structures with little input in curriculum development, teaching methods, and assessment practices. This lack of control over their work environment can result in frustration, dissatisfaction, and feelings of helplessness, contributing to poor mental health (Ogunyemi, 2021). Furthermore, frequent policy changes and administrative demands without adequate training or resources create additional stress, making it difficult for teachers to adapt effectively.

Teachers' mental wellbeing is also affected by the challenging behavioral issues they encounter in classrooms. Disruptive students, lack of parental support, and incidents of violence in schools contribute to high levels of stress and anxiety among educators (Balogun & Alabi, 2018). The absence of counseling services and mental health support within schools further compounds these challenges, leaving teachers to cope with their mental health struggles alone. Without adequate support systems, teachers are more likely to experience burnout, negatively impacting their ability to provide quality education. Educational administrators should create a positive and inclusive school culture, providing professional development on stress management, and ensuring access to mental health resources which can significantly enhance teachers' psychological resilience (Eze, 2020). Additionally, reducing administrative burdens, improving

salaries, and fostering open communication between teachers and administrators can help alleviate workplace stressors, contributing to better mental health outcomes.

Investing in teachers' mental wellbeing benefits not only individual educators but also students and the overall education system. When teachers have good mental health, they are more engaged, motivated, and capable of creating a supportive learning environment. Conversely, neglecting teachers' mental wellbeing can lead to increased absenteeism, low morale, and high turnover rates, all of which negatively impact student achievement and school performance (Okonkwo, 2019). Educational administrators must take proactive measures to support teachers by implementing mental health programs, improving working conditions, and fostering a supportive school environment.

Educational Administrator

Educational administrators play a crucial role in the management and leadership of educational institutions, ensuring that schools, colleges, and universities operate efficiently and effectively. Their responsibilities encompass a wide range of functions, including policy implementation, curriculum development, faculty management, and student affairs. Educational administrators contribute to the overall quality of education and create an environment conducive to learning (Bush, 2018). Their role varies depending on the level of the institution they serve. In primary and secondary schools, principals and vice-principals are responsible for setting educational goals, managing staff, and ensuring compliance with educational policies and regulations. In higher education, administrators may include deans, department heads, and university presidents who focus on strategic planning, faculty development, and institutional growth (Hallinger & Heck, 2010). Regardless of the level, effective educational administrators must possess strong leadership, communication, and problem-solving skills to navigate the complexities of the education sector (Leithwood et al., 2020).

Balancing administrative duties with the educational needs of students and teachers pose as great challenges educational administrators face. They must address issues such as budget constraints, policy changes, and evolving educational technologies while maintaining academic standards and fostering a positive learning culture (Spillane et al., 2004). They also play a pivotal role in shaping institutional policies that promote inclusivity, diversity, and student success (Lumby & Foskett, 2016). Their effectiveness is often linked to their ability to engage stakeholders, including teachers, parents, and policymakers. Collaborative leadership approaches that involve active participation from all stakeholders contribute to better decision-making and improved institutional outcomes (Gurr et al., 2006). Furthermore, professional development opportunities for administrators help them stay updated with best practices and emerging trends in education management (Robinson, Lloyd, & Rowe, 2008). Educational administrators serve as the backbone of educational institutions, ensuring their smooth operation and continuous improvement. Their ability to navigate administrative challenges, foster collaboration, and implement effective policies directly impacts the success of both educators and students. Investing in well-trained and resourceful educational administrators is essential for the advancement of the education system and the achievement of academic excellence.

KEY RESPONSIBILITIES OF EDUCATIONAL ADMINISTRATORS

Providing Good Leadership

Providing good leadership is a fundamental responsibility of educational administrators, as it significantly influences the quality of education and institutional effectiveness. Leadership in education involves decision-making, policy implementation, and fostering an environment that supports learning and professional growth. Effective leadership ensures that educational institutions achieve their objectives and adapt to the evolving needs of society. A critical aspect of leadership in education is the ability to inspire and motivate teachers, students, and staff. According to Northouse (2021), leadership involves influencing individuals to achieve a common goal, and educational administrators must use this influence to drive institutional success. Leaders can foster a culture of excellence and continuous improvement by demonstrating a clear vision and communicating it effectively. Good leadership is also characterized by ethical decision-making and a commitment to fairness and inclusivity. Fullan (2014) explained that effective educational leaders uphold integrity and create policies that support all learners, regardless of their socio-economic background. Ethical leadership builds trust among stakeholders and enhances the credibility of educational institutions.

Collaboration and teamwork are essential for effective educational leadership. Leithwood and Jantzi (2006) emphasized that distributed leadership where leadership responsibilities are shared, leads to increased innovation and organizational effectiveness. Encouraging participatory decision-making allows educational leaders to harness the collective expertise of their teams. Additionally, adaptability and resilience are crucial for educational leaders. Kotter (2012) emphasized that successful leaders anticipate challenges, communicate change effectively, and engage stakeholders in transformative processes. Educational administrators can create environments that promote excellence and innovation, ultimately contributing to the advancement of education and society by embracing these qualities.

Management of Resources and Equipment

Management of resources and equipment is a crucial responsibility of educational administrators, as it directly affects the efficiency, quality, and effectiveness of educational institutions. Proper resource management ensures that schools and other educational settings have the necessary materials, facilities, and technological tools to enhance learning and teaching. Educational administrators must strategically allocate resources, maintain infrastructure, and ensure the sustainability of educational programs. Efficient resource management involves budget planning and financial stewardship. According to Odden & Picus (2019), educational leaders must develop financial strategies that align with institutional goals while maximizing the use of available funds. Prioritizing expenditures and ensuring fiscal responsibility will help administrators to create an environment where resources are used effectively to support student learning outcomes.

The maintenance and procurement of equipment are also vital aspects of resource management. Proper oversight of instructional materials, laboratory equipment, and digital technology is necessary to ensure that students and educators have access to high-quality tools for teaching and learning. Lunenburg (2010) highlighted that schools with well-managed resources experience better academic performance and teacher satisfaction, as they provide a

conducive learning environment. Additionally, sustainable resource management requires educational administrators to implement policies that promote longevity and efficiency. This includes adopting eco-friendly practices, investing in durable equipment, and ensuring routine maintenance. Leithwood and Riehl (2005) argued that resource management should be proactive, with leaders anticipating future needs and adapting to technological advancements that enhance educational delivery. Educational administrators can create a stable, well-equipped learning environment that supports academic excellence and institutional growth by effectively managing resources and equipment. Strategic planning, ethical decision-making, and proactive maintenance all contribute to the success of educational institutions.

Development of Curriculum

Development of curriculum is a key responsibility of educational administrators, as it determines the quality and relevance of education provided to students. A well-structured curriculum ensures that learners acquire the necessary knowledge, skills, and competencies to succeed in their academic and professional pursuits. Educational administrators play a vital role in designing, implementing, and evaluating curricula to align with educational standards, societal needs, and technological advancements.

Effective curriculum development requires strategic planning and collaboration with educators, policymakers, and other stakeholders. According to Ornstein and Hunkins (2018), curriculum planning involves setting educational goals, selecting appropriate content, and designing instructional strategies that enhance learning. Educational administrators must ensure that curricula remain dynamic and responsive to emerging trends, including advancements in technology and shifts in global education demands. Administrators are also responsible for implementing curriculum policies that promote inclusivity and equity in education. Tomlinson (2014) highlighted that differentiated instruction and curriculum adaptation are crucial for addressing the diverse learning needs of students. Administrators can create an inclusive educational environment that caters to various learning styles and abilities by integrating flexible teaching strategies and assessment methods.

Ongoing curriculum evaluation is important in curriculum development. Administrators must regularly assess the effectiveness of instructional programs through student performance data, teacher feedback, and stakeholder engagement. Wiggins and McTighe (2005) emphasized the importance of backward design, where curriculum planning begins with the identification of desired learning outcomes and then develops appropriate instructional methods and assessments. This approach ensures that curricula remain goal-oriented and outcome-driven.

Evaluation of Teachers

Evaluation of teachers is a key responsibility of educational administrators, as it ensures instructional effectiveness and the overall quality of education. A well-structured teacher evaluation system helps identify strengths, areas for improvement, and professional development needs. Administrators can enhance teaching practices, student learning outcomes, and institutional performance by conducting regular evaluations. Effective teacher evaluation involves multiple assessment methods, including classroom observations, student performance data, and peer reviews. According to Stronge (2018), comprehensive teacher evaluations should incorporate both formative and summative assessments to provide constructive feedback and

guide professional growth. Formative assessments offer ongoing feedback for improvement, while summative evaluations measure overall teaching effectiveness and impact on student learning.

Administrators must ensure that teacher evaluations are fair, transparent, and aligned with educational goals. Marzano and Toth (2013) hold that high-quality evaluations rely on clear performance standards, objective criteria, and collaborative discussions between teachers and evaluators. A well-defined evaluation process fosters a culture of continuous improvement and accountability within educational institutions. Professional development is a crucial component of teacher evaluation. Effective evaluations should not only assess performance but also provide opportunities for professional growth. Guskey (2002) emphasized that linking teacher evaluations to targeted professional development enhances instructional strategies and student achievement. Administrators play a vital role in facilitating training programs, mentorship, and workshops based on evaluation results.

Additionally, data-driven decision-making is essential for teacher evaluation. Administrators can make informed decisions about teacher support and development by analyzing student progress, feedback surveys, and instructional effectiveness metrics. Stronge (2018) asserted that data-driven evaluations lead to meaningful improvements in teaching quality and student outcomes. Through well-structured teacher evaluation processes, educational administrators contribute to the advancement of teaching standards and institutional excellence. A balanced approach incorporating assessment, professional development, and data analysis ensures that teachers receive the support needed to excel in their roles.

Addressing Students' Needs, Concerns and Discipline

Addressing students' needs, concerns, and discipline is a key responsibility of educational administrators, as it directly impacts student success and the overall learning environment. Ensuring that students receive the necessary academic, emotional, and social support contributes to their holistic development and enhances institutional effectiveness. Educational administrators must implement policies and initiatives that promote student well-being while maintaining discipline and fostering a positive school culture. Meeting students' needs requires administrators to create inclusive and supportive learning environments. According to Darling-Hammond et al. (2020), equitable access to educational resources and personalized learning strategies can enhance student outcomes. Administrators play a critical role in ensuring that students have access to counseling services, special education support, and extracurricular activities that contribute to their overall development. Providing resources and mentorship opportunities helps students overcome academic and personal challenges.

Effectively addressing students' concerns involves active communication and engagement with students, teachers, and parents. Research by Kraft and Dougherty (2013) highlighted that strong partnerships between schools and families contribute to student motivation and achievement. Administrators should create platforms for students to voice their concerns and ensure timely interventions to resolve issues related to academic performance, peer relationships, and mental health. Maintaining discipline is another essential aspect of student management. Fair and consistent disciplinary policies help create a structured and respectful learning environment. Gregory et al. (2021) emphasized that proactive and restorative approaches to discipline, such as conflict resolution and behavioral interventions, are more

effective than punitive measures. Administrators must ensure that discipline policies are transparent, equitable, and aligned with educational goals.

Implementation of Policies

Implementation of policies ensures that schools function effectively and meet academic and institutional goals. Policies provide a framework for decision-making, resource allocation, and accountability, contributing to a structured and efficient educational system. Administrators play a crucial role in interpreting, adapting, and enforcing policies that align with national education standards and institutional objectives.

Effective policy implementation requires strategic planning and collaboration among stakeholders. According to Fullan (2016), educational leaders must foster a shared vision and actively involve teachers, parents, and policymakers in the policy execution process. Ensuring that policies are clearly communicated and understood by all members of the educational community enhances compliance and effectiveness. Administrators must also monitor and evaluate policy outcomes to ensure they meet intended goals. Spillane et al. (2019) opined that continuous assessment and data-driven decision-making help refine policies to better address evolving educational needs. Administrators must also ensure that policies address the diverse needs of students and educators, promoting fairness and accessibility just as Honig & Rainey (2020) maintained that adaptive leadership in policy implementation fosters a responsive and inclusive learning environment.

SELF-CARE AND STRESS REDUCTION

Teacher self-care and stress reduction are essential components of maintaining educators' overall wellbeing and effectiveness in the classroom. The teaching profession is demanding, often leading to high levels of stress, burnout, and emotional exhaustion. Without appropriate self-care strategies, teachers may struggle with maintaining job satisfaction, managing their workload, and sustaining positive relationships with students and colleagues (Jennings & Greenberg, 2009). Self-care for teachers involves intentional actions that promote physical, emotional, and mental health. Engaging in regular physical activity, maintaining a healthy diet, and ensuring adequate sleep are foundational aspects of self-care that contribute to overall resilience and wellbeing. Mindfulness practices, meditation, and relaxation techniques can help teachers manage stress and maintain focus throughout their workday (Meiklejohn et al., 2012). Emotional self-care involves seeking support from colleagues, family, and mental health professionals to navigate the emotional challenges of teaching (Brunsting et al., 2014).

Reducing stress in the teaching profession requires systemic support from schools and educational institutions. Workload management, reasonable expectations, and a positive work environment play a significant role in minimizing teacher stress. School leaders can support teachers by fostering a culture of collaboration, providing professional development opportunities, and ensuring that teachers have access to mental health resources (Skaalvik & Skaalvik, 2018). When teachers feel supported and valued, they are more likely to remain engaged and motivated in their profession. The ability to set boundaries is important because, teachers often take on additional responsibilities outside their instructional duties, such as administrative tasks, extracurricular activities, and student counseling. Learning to say no to

excessive demands and prioritizing personal wellbeing is necessary to prevent burnout and maintain long-term career satisfaction (Richards, Levesque-Bristol, Templin, & Graber, 2016).

SELF-CARE STRATEGIES

Some strategies that will enable teachers to take care of themselves are stated hereunder:

Exercise and physical activity

Exercise and physical activity are essential self-care strategies for teachers, promoting both physical and mental well-being. Engaging in regular physical activity can help teachers manage stress, increase energy levels, and enhance overall job satisfaction, ultimately improving their effectiveness in the classroom. Physical activity plays a significant role in stress management. Anderson & Shivakumar (2013) stated that exercise reduces cortisol levels, the hormone associated with stress, and stimulates endorphin production, leading to improved mood and reduced anxiety. Teachers who incorporate exercise into their daily routines are more likely to experience lower stress levels and greater emotional resilience.

Regular physical activity also improves cognitive function and productivity. According to Ratey & Hagerman (2013), aerobic exercise enhances brain function, leading to better concentration, memory, and problem-solving skills. These cognitive benefits can be particularly valuable for teachers, helping them manage classroom challenges more effectively while maintaining a high level of engagement with students. Exercise also promotes physical health, reducing the risk of chronic conditions such as cardiovascular disease, obesity, and musculoskeletal disorders (Warburton & Bredin, 2017). Teachers who prioritize physical activity are more likely to experience fewer health-related absences, thereby ensuring consistency in classroom instruction and student support. Creating a culture of wellness within educational institutions is essential. Schools can encourage teachers to participate in physical activities by providing wellness programs, fitness resources, and scheduled breaks for movement.

Healthy Eating

Healthy eating is a crucial self-care strategy for teachers, supporting their physical health, mental well-being, and overall job performance. The demanding nature of the teaching profession often leads to stress and fatigue, making proper nutrition essential for sustaining energy levels, boosting immunity, and enhancing cognitive function. Prioritizing a balanced diet can help teachers maintain their health and effectively manage daily challenges in the classroom. A well-balanced diet rich in fruits, vegetables, whole grains, and lean proteins provides essential nutrients that improve physical and mental well-being. According to Micha et al. (2017), consuming nutrient-dense foods reduces the risk of chronic illnesses such as cardiovascular disease and diabetes, which can lead to absenteeism and decreased productivity. Teachers who adopt healthy eating habits are more likely to experience increased stamina and resilience, enabling them to engage effectively with students.

Proper nutrition also plays a vital role in mental health and stress management. O'Neil et al. (2014) suggested that diets rich in omega-3 fatty acids, antioxidants, and essential vitamins support brain function, enhance mood, and reduce symptoms of anxiety and depression. Teachers who consume a balanced diet are better equipped to handle the emotional demands of

their profession, leading to improved job satisfaction and performance. Schools can encourage healthy eating habits among teachers by promoting wellness programs, providing access to nutritious meals, and fostering a supportive environment for mindful eating.

Sleep and Relaxation

Sleep and relaxation are essential self-care strategies for teachers, contributing to their physical health, emotional resilience, and professional effectiveness. The demanding nature of teaching, including lesson planning, grading, and classroom management, can lead to stress and burnout. Prioritizing sufficient sleep and relaxation techniques helps educators sustain their energy levels, improve cognitive function, and maintain emotional balance. Adequate sleep is fundamental to teachers' well-being and job performance. Walker (2017) highlighted that sleep enhances memory retention, decision-making, and problem-solving abilities. Teachers who get at least seven to nine hours of sleep per night are better able to focus, manage classroom dynamics, and adapt to challenges effectively. Conversely, chronic sleep deprivation impairs attention, increases stress levels, and weakens the immune system, making teachers more susceptible to illness and burnout.

Relaxation techniques, such as mindfulness, deep breathing, and meditation, play a critical role in reducing stress and enhancing mental well-being. A study by Khoury et al. (2015) found that mindfulness-based stress reduction techniques significantly improve emotional regulation and decrease anxiety. Teachers who engage in relaxation practices experience lower levels of work-related stress and greater job satisfaction, allowing them to foster a more positive classroom environment. Schools can support teachers by promoting work-life balance, providing resources for stress management, and encouraging regular breaks during the workday. Implementing policies that prioritize teacher well-being can enhance productivity and reduce burnout rates, ultimately benefiting both educators and students.

Social Connections

Social connections are an essential self-care strategy for teachers, offering emotional support, reducing stress, and enhancing overall well-being. The teaching profession can be isolating due to demanding schedules and high workloads, making it crucial for educators to build strong personal and professional networks. Teachers can improve their mental health, resilience, and job satisfaction by fostering meaningful relationships with colleagues, friends, and family. Positive social interactions contribute to lower stress levels and emotional stability. Holt-Lunstad et al. (2015) indicated that strong social ties are linked to reduced anxiety, lower cortisol levels, and improved cardiovascular health. Teachers who engage in regular social activities and maintain supportive relationships are better equipped to handle job-related pressures and prevent burnout.

Collaborative relationships within the workplace also enhance professional growth and job satisfaction. According to Ronfeldt et al. (2015), teachers who engage in collegial interactions and professional learning communities demonstrate higher levels of effectiveness and motivation. Engaging in mentorship, team teaching, and informal discussions fosters a sense of belonging and reduces feelings of isolation. Beyond professional settings, maintaining connections with family and friends provides emotional support and work-life balance. Teachers who set aside time for social engagements outside of work experience greater overall happiness

and a stronger sense of fulfillment (Lyubomirsky, 2013). Institutions can support social well-being by encouraging peer collaboration, team-building activities, and wellness programs that foster interpersonal connections.

TECHNIQUES TO REDUCE STRESS

Armed with the knowledge that teaching is one of the most stressful jobs, it is ideal for teachers to intentionally work reducing stress. The following techniques will be useful:

Progressive muscle relaxation

Progressive muscle relaxation (PMR) is an effective technique for reducing stress by promoting physical and mental relaxation. Developed by Jacobson in the early 20th century, PMR involves systematically tensing and relaxing different muscle groups to release tension and induce a state of calm. This method has been widely adopted in clinical and non-clinical settings to manage stress, anxiety, and related conditions. PMR works by counteracting the physiological effects of stress. When individuals experience stress, their muscles become tense, leading to discomfort and fatigue. Conrad & Roth (2022) suggested that practicing PMR reduces muscle tension, lowers cortisol levels, and enhances overall well-being. Individuals can achieve a deep sense of relaxation and improve their ability to cope with stress by engaging in guided muscle relaxation exercises.

PMR has been shown to improve sleep quality and reduce symptoms of anxiety. A study by Pawlow & Jones (2017) found that participants who practiced PMR before bedtime experienced longer and more restful sleep. Since stress and anxiety often disrupt sleep patterns, integrating PMR into daily routines can lead to better overall health and mental resilience. PMR is particularly useful for individuals in high-stress professions, such as educators, healthcare workers, and corporate employees. Regular practice can help individuals remain calm under pressure, enhance concentration, and improve emotional regulation. Schools and workplaces can support stress reduction by incorporating PMR techniques into wellness programs and encouraging employees to engage in relaxation exercises.

Journaling

Journaling is an effective technique for reducing stress by allowing individuals to express their thoughts and emotions in a structured manner. Writing about personal experiences and emotions can help individuals process their feelings, gain clarity, and develop healthier coping mechanisms. As a self-care strategy, journaling has been widely recommended for its psychological and emotional benefits. Expressive writing has been shown to reduce stress and improve mental well-being. Pennebaker & Smyth (2016) suggested that journaling about stressful experiences can help individuals regulate emotions, reduce anxiety, and enhance overall psychological resilience. Individuals can gain perspective and find constructive solutions to their problems by externalizing worries and concerns onto paper.

Journaling also plays a significant role in reducing symptoms of depression and enhancing self-awareness. Studies by Baikie and Wilhelm (2019) indicated that individuals who engage in reflective writing experience fewer depressive symptoms and improved emotional regulation. Keeping a gratitude journal, for example, has been linked to increased feelings of

happiness and reduced stress levels, as it encourages individuals to focus on positive aspects of their lives (Emmons & McCullough, 2015). Beyond emotional benefits, journaling can also improve physical health. Research by Smyth et al. (2018) suggested that individuals who practice expressive writing show lower levels of cortisol, the stress hormone, and improved immune function. Regular journaling can thus serve as a holistic approach to well-being, benefiting both mental and physical health.

Time management

Time management is a crucial technique for reducing stress, allowing individuals to efficiently organize tasks, set priorities, and allocate time effectively. Poor time management often leads to feelings of being overwhelmed, increased anxiety, and decreased productivity. Individuals can create balance, minimize stress, and improve overall well-being by developing structured time management strategies. Effective time management enhances productivity and reduces stress by promoting organization and prioritization. Macan et al. (2012) opined that individuals who use time management techniques, such as goal-setting and scheduling, experience lower levels of stress and higher job satisfaction. Individuals can avoid last-minute pressure and maintain a sense of control over their workload by breaking tasks into manageable segments and setting realistic deadlines.

Time management also contributes to better work-life balance, reducing burnout and improving overall mental health. Studies by Aeon and Aguinis (2017) highlighted that employees who plan their work schedules effectively have greater psychological well-being and job performance. Implementing strategies such as the Pomodoro Technique, task batching, and prioritization matrices can help individuals complete their tasks efficiently while ensuring time for rest and relaxation. Additionally, the ability to manage time effectively allows individuals to allocate moments for self-care, exercise, and leisure activities. Häfner et al. (2014) found that students and professionals who engage in structured time management practices report lower stress levels and improved academic or professional outcomes. Institutions and workplaces can support individuals by promoting time management workshops and encouraging the use of productivity tools.

Deep Breathing Exercises

Deep breathing exercises are a simple yet effective technique for reducing stress by activating the body's relaxation response. Individuals can lower heart rate, reduce blood pressure, and promote a sense of calm by focusing on slow, controlled breaths. This technique is widely used in mindfulness, meditation, and therapeutic settings to help manage stress and anxiety. Deep breathing works by stimulating the parasympathetic nervous system, which counteracts the body's stress response. Ma et al. (2017) observed that individuals who practiced deep breathing exercises experienced significant reductions in cortisol levels, the hormone associated with stress. Deep breathing enhances emotional regulation and cognitive function. A study by Zaccaro et al. (2018) revealed that controlled breathing techniques, such as diaphragmatic breathing and paced respiration, improve focus and mental clarity while reducing symptoms of anxiety and depression. Practicing deep breathing before stressful events, such as exams or presentations, can help individuals remain calm and composed. Deep breathing exercises are also beneficial for improving sleep quality. Jerath et al. (2015) indicated that slow deep breathing techniques

promote relaxation and facilitate the transition into restful sleep by reducing hyperarousal. As sleep disturbances are often linked to stress, incorporating deep breathing into bedtime routines can support better sleep patterns.

CONCLUSION

Fostering teacher wellbeing is essential for the sustainability and effectiveness of the education system. Teachers play a crucial role in shaping the future of students, but the increasing demands of the profession, including heavy workloads, emotional labor, and administrative responsibilities, have led to high levels of stress and burnout. Without intentional efforts to support teachers' mental, emotional, and physical health, schools risk facing higher attrition rates, decreased job satisfaction, and reduced instructional quality. Educational administrators hold a pivotal responsibility in addressing these concerns by creating environments that prioritize self-care, stress reduction, and overall teacher wellbeing. Their leadership, policies, and initiatives can determine whether teachers feel valued, supported, and motivated to continue in their roles. Administrators can create a positive and sustainable work environment for teachers by implementing effective strategies such as fostering a culture of collaboration, offering professional development opportunities, reducing administrative burdens, and providing mental health resources. Encouraging open communication and providing safe spaces for teachers to express their concerns fosters trust and strengthens the professional community. When teachers feel heard and supported, their job satisfaction increases, leading to higher retention rates and better student outcomes.

Moreover, modeling self-care practices and setting realistic expectations regarding workload can signal to educators that their well-being is a priority, ultimately creating a more balanced and productive school environment. The integration of mindfulness practices and stress management programs within schools can be particularly beneficial in equipping teachers with the tools needed to cope with daily challenges. When schools emphasize work-life balance and provide mental health resources, teachers are more likely to develop resilience against stressors. Additionally, recognizing and celebrating teachers' efforts and achievements contributes to positive morale and reinforces their sense of purpose in the profession. Small gestures, such as acknowledgment in staff meetings or providing wellness incentives, can go a long way in making teachers feel appreciated and valued. While the responsibility of fostering teacher wellbeing falls heavily on educational administrators, it is also a shared effort that requires systemic changes within the education sector.

Policymakers, school boards, and communities must collaborate to create policies that promote teacher health and professional fulfillment. Investments in mental health programs, workload management initiatives, and professional support structures can significantly improve teacher retention and satisfaction. Fostering a culture that prioritizes wellbeing should be embedded in the foundation of school leadership, ensuring that educators receive the support they need to thrive. Ultimately, prioritizing teacher wellbeing is not only beneficial for educators themselves but also for students and the broader educational system. When teachers are mentally and emotionally well, they are more effective in the classroom, leading to improved student learning experiences and academic outcomes. Educational administrators contribute to a more sustainable and fulfilling teaching profession by actively promoting self-care and stress reduction. Schools that support their teachers create environments where both educators and students can flourish, reinforcing the vital role of wellbeing in achieving educational success.

Suggestions

For educational administrators to foster teacher wellbeing by promoting self-care and stress reduction, the following suggestions are put forward:

- Educational administrators should foster a positive school environment where teachers feel valued, respected, and supported. Establishing professional learning communities (PLCs) and peer mentorship programs can help teachers share experiences, challenges, and best practices, reducing isolation and stress. Encouraging teamwork and collaboration among educators can create a sense of belonging and mutual support.
- Reducing excessive administrative tasks and non-teaching responsibilities can significantly alleviate teacher stress. Administrators should streamline grading policies, minimize unnecessary paperwork, and leverage technology to automate routine tasks. Providing additional support staff or redistributing workload fairly can also help teachers focus more on instructional duties and student engagement rather than administrative burdens.
- Offering relevant and high-quality professional development opportunities can enhance teachers' confidence, efficiency, and job satisfaction. Administrators should provide training in stress management, mindfulness, and self-care practices alongside pedagogical development. Supporting teachers in pursuing further education, certifications, and leadership roles can also contribute to their professional fulfillment and overall wellbeing.
- Schools should implement programs that support teachers' mental and emotional health, such as counseling services, wellness workshops, and mindfulness training. Administrators can provide access to Employee Assistance Programs (EAPs) and encourage teachers to take mental health days when needed. Promoting a culture where mental health is openly discussed and prioritized can help reduce stigma and encourage teachers to seek support when necessary.
- Administrators should set clear policies that prevent overworking, such as limiting after-hours emails, discouraging excessive workload expectations, and ensuring teachers take breaks. Encouraging teachers to disconnect from work outside school hours and promoting flexible scheduling where possible can help prevent burnout. Recognizing the importance of personal time allows teachers to recharge and maintain their enthusiasm for teaching.
- Regularly acknowledging and celebrating teachers' hard work and achievements can boost morale and motivation. Simple gestures such as personalized thank-you notes, staff appreciation events, and verbal recognition during meetings can make a significant difference. Providing incentives, such as wellness stipends or additional planning time, can further demonstrate administrators' commitment to supporting teacher wellbeing. Educational administrators can create a healthier and more sustainable work environment, ensuring that teachers remain motivated, engaged, and capable of delivering high-quality education; by implementing these strategies.

ATTAINING SCHOOL GOALS THROUGH PRINCIPALS' ADMINISTRATIVE COMPETENCES

Maureen CHUKWU
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

The role of principals' administrative competencies is critical in achieving school goals in Nigeria. Effective school administration requires leadership skills, strategic planning, resource management, and the ability to foster a conducive learning environment. Principals who demonstrate strong administrative competencies enhance staff motivation, student performance, and overall school efficiency. However, many Nigerian schools face challenges such as poor leadership training, inadequate resources, and ineffective management, which hinder goal attainment. This paper examined the impact of principals' administrative competencies on school effectiveness, emphasizing the need for professional development programs to enhance their leadership capabilities. Researches showed that schools led by competent administrators experience improved academic performance, discipline, and stakeholder engagement. The paper concluded that equipping principals with essential leadership and management skills is crucial for achieving educational objectives. As a recommendation, the government and educational stakeholders should implement continuous training programs and workshops for principals to enhance their administrative skills. Additionally, policies should be established to ensure that only qualified and well-trained individuals are appointed as school leaders. Strengthening principals' competencies will ultimately contribute to the realization of school goals, fostering academic excellence and institutional growth in Nigeria's education sector.

Keywords: Principals, Administrative competencies, Achievement, School Goals.

INTRODUCTION

A school principal holds a vital role within the realm of education as they assume the position of leadership and chief administration in an educational institution, usually from kindergarten through 12th grade. The responsibilities of a school principal encompass a wide array of crucial tasks and duties, all aimed at fostering a productive and enriching learning environment. School administration involves managing, administering the curriculum and teaching, pastoral care, discipline, assessment evaluation and examinations, resource allocation, costing and forward planning, staff appraisal relationship with the community, use of the practical skills necessary for

surviving the policies of organisation such as decision-making, negotiation, bargaining, communication, conflict handling, running meetings and so on (Okobia, 2015).

All these tasks can be reduced to the following: planning, organising, directing, supervising, and evaluating the school system. These activities are those of the school principal who must ensure they are all directed towards efficient and effective teaching and learning in the school so as to be able to produce quality outputs. The principal of a school is a planner, director, controller, coordinator, organiser, adviser and a problem-solver. The principal is the person on whose shoulders rest the entire administration, success or failure of the school. The principal identifies and set goals and objectives of the school, which of course, must be in line with the national objectives, analyses tasks and share responsibilities of the staff according to specialization and expertise (Lipham, 2016).

At its core, the role of a school principal revolves around effective leadership and management. Principals are not only responsible for the day-to-day operations of the school but also play a central role in shaping its overall ethos and direction. They set the school's educational vision and goals, charting a course for academic excellence. This often involves developing curriculum standards, ensuring that instructional methods align with educational best practices, and continuously seeking ways to improve teaching and learning.

The administrative aspects of a principal's role are equally significant. They oversee the school's staff, manage budgets, allocate resources, and maintain school facilities. Personnel decisions, such as hiring and evaluating teachers and support staff, fall under their purview. Principals are instrumental in creating schedules, coordinating activities, and ensuring the smooth functioning of the school's operations. One of the most critical areas where a school principal is deeply involved is student welfare. Principals work tirelessly to maintain a safe, nurturing, and orderly learning environment. They handle student discipline matters, enforcing school policies and codes of conduct. Beyond punitive measures, they actively engage with counsellors and support staff to provide guidance and support to students facing academic, social, or personal challenges.

The position of the principal is crucial in the management of the secondary school setting. The principal is saddled with the responsibility of efficient utilization and coordination of human and material resources towards the attainment of the organizational goals. The success of the school in implementing the educational program and goal achievement depends largely on the principal administrative behavior is a known fact that education contributes immensely in the development of the human capital needed for the nation’s productive sector.

Educational goal achievement is generally seen as excellence in all academic curricula and extra-curriculum activities as well as an academic discipline. Educational goal achievement is the extent to which the principal, teachers, students, and educational organization has achieved the predetermined educational goals (Peter et al., 2014). In addition, it describes the realization of effective cognitive, affective and psychomotor domains of students in an educational system. Educational goal achievement in this study refers to the pedagogical quality and student self-efficacy.

THEORETICAL UNDERPINNING

This study is anchored on Administrative Management Theory by Henri Fayol 1918 cited Peretomode (2019)

Henri Fayol (1918) Administrative Management Theory

Henry Fayol, a French Industrialist and a Mining Engineer by profession developed the theory of administrative management (Fayol, 1918) in Peretomode (2019). This theory concerns the comprehensive conceptual framework, general organization, and leadership that are applicable in all organizations. This theory argued that for the achievement of organizational goals, there should be proper management of departments, and work should be classified into different groups so that the tasks can be done effectively. This concept is a contemporary of Taylor's scientific management. Scientific management only concentrates on shop floor levels like job design and payment of workers whereas administrative theory is concerned with the entire range of managerial performance. Fayol suggests that management involves many functions like forecasting, planning, organizing, commanding, coordinating, and controlling. For the current study, in the context of the school system, the principal ensures that proper management/administrative work is been put in place to ensure that the right competent staff are brought into the system for excellent goal attainment. This theory mainly focuses on improving the efficiency of management so that higher-level employees understand correctly and the tasks can be done in a standardized way.

CONCEPTUAL CLARIFICATIONS

School Principal

School principals and teachers play a major role in developing a school culture for professional development (Lee & Li, 2015). The school principal leads training programs, seminars, and workshops; simultaneously, he informally assesses teachers' skills. Unanswered aspects of the relationship between school leaders and teachers and its elect on professional development were investigated (Sit, 2015). Based on previous studies (Green, 2001; Leithwood & Rielh, 2003; Day, 2005), the general characteristics that school principals must acquire as leaders of the school are as follows:

- Creating relationships with educational staff, parents, and students;
- Creation and transmission of common vision and goals;
- Promotion of the leadership of power-sharing and allocating responsibilities;
- Creating a feeling of collectivity;
- Collaboration, understanding, and teachers' development;
- Personality traits.

The school principal has a consultative and guiding role in achieving professional development (Owens, 2001). School principals are responsible for shaping the conditions of the school environment for professional development, based on their special characteristics. Leithwood (2005) referred that leaders' age, gender, and education can affect their behaviors.

School principals, who play a key role in the development and improvement of schools, must also be good coordinators and catalysts (Balcı, 2014), and they need to have the ability to direct teachers in activities for the development and improvement of the school and bring about innovations by influencing them. According to Hoy and Miskel (2010), school principals are

leaders who take an active role in realising school goals by bringing together all the required resources and influencing and striving to develop staff. In addition, deputy principals are also strategically important administrators in schools, just as the school principals. Deputy principals can also exhibit leadership behaviours by assuming important tasks and roles in the development and effectiveness of the school. The principals are not solely dominant in schools regarding administration, and there are other active players (Cerit, 2008).

Administration

According to NOUN (2006) school administration is a social process concerned with identifying, maintaining, stimulating, controlling and unifying, formally and informally organized human and material energies within an interpreted system while Okendu (2012) in his own view define School administration as a concept involving all the processes through which resources are mobilized in educational institutions to accomplish the goals of education. It is a process of mobilizing school resources towards achievement of desirable educational goals. School administration is an activity process that requires expertise and training in educational principles and practices in ensuring proper management of schools general activities for achieving result in education.

Eresimadu (1996) believed that School administration is the implementation and facilitation of the programmes and management of the school resources for the achievement of school objectives. School administration is the branch of pedagogy that studies the means and methods of Administering schools, reveals the distinctive feature in the system of school management, and analyzes the specific problems involved in organizing such a system. Summarily, Ojo (1999) posited that school administration involves managing, administering the curriculum and teaching, pastoral care, discipline, assessment, evaluation and examination, resource allocation, costing and forward planning, staff appraisal, relationship with community, use of the practice necessary for the surviving the policies of the organization such as decision making, negotiation, bargaining, communication, conflict handling, running meeting and so on.

GOALS OF SECONDARY SCHOOLS IN NIGERIA

The National Policy on Education presented the goals for the administration of secondary schools in Nigeria; few are highlighted below (FRN, 2014):

- Secondary education in Nigeria is designed to prepare students for tertiary education and equip them with skills for employment.
- The curriculum emphasizes cultural awareness and national identity to foster unity among students from diverse backgrounds.
- The education system integrates vocational and technical training to encourage entrepreneurship and self-reliance.
- Science and technology education is prioritized to support national development and innovation.
- Schools aim to instil values such as discipline, honesty, and responsibility in students.

Principals' Administrative Competences for Goal Attainment

The concept of competence can be defined as a person's capacity to connect knowledge, skills, attitudes and professional identity that are relevant for a certain profession (Krüger, 2009). It is also described as being adequately or well-qualified physically and intellectually to perform duties of any specific profession. These qualities are important for any organization as well as schools. In this manner, their administrative competency can be put as their skills, knowledge and beliefs in their behaviors in instructional leadership, organizational development and creating a positive school culture (MEB, 2008).

According to Balci (1988), these competencies have significant functions for principals to perform their work effectively in any school system in the world as well as Turkey. Having the administrative competency especially in instructional leadership, organizational development and creating a positive school culture, it is considered that principals can function better at schools in terms of student outcomes. Principal administrative competence refers to the ability of the school principal to plan, organize, direct, coordinate, and harness all the resources at his disposal for the purpose of achieving school goals. A school principal display competence in several ways, however, this paper's focus is on principals' supervisory competence, leadership competence, and communication competence.

In Nigeria, principals are the heads of secondary schools, charged with the responsibility of running the day-to-day affairs of the schools. Accordingly, they are responsible for all that happens in the schools. Various writers have expressed their opinions on whom the principal is, via-a-vis his various roles and competencies. Ogbonnaya (2014), Alpha (2015) in their different opinions described the principal as the accounting officer of the school, the chief executive and instructional leader. As an accounting officer, the principal oversees the day-today management of the school.

Stressing this further, Ogbonnaya (2014) stated that the most important function of the secondary school principal is his instructional leadership role in the school. According to the author, this role is exercised as the principal plans, organizes and promotes instructions. He however further noted that the secondary school principal has another function of ensuring that fund is procured and judiciously used on various school programmes. Mgbodile (2014) added that principals are responsible for implementing educational programmes in schools, ensuring a conducive atmosphere is created for learning. According to the writer, the principals are the hub on which the success of secondary education revolves, because they help to translate policies on education into action. In view of the above, it can be deduced that the principal's key function is to promote education through effective administration of teaching and learning programmes. It is therefore expected that a principal must be competent enough in his administrative duties.

Supervision Competence

Every school principal is faced with the challenge of managing and running a school efficiently and effectively for the one reason of goal attainment which is achievable through optimum utilization of resources (human and material). In a bid to attaining the school goals, the principal plays a supervisory role to ensure optimum performance. The act of playing a supervisory role is known as supervision. Mobolaji (2006) sees supervision as an assistance or hand of help given to a professional colleague, the teacher, in the process of teaching. He further stated that it is a professional, continuous and cooperative exercise that covers all aspects of the life of a school.

The word supervision is often referred to as instructional supervision. This is to reflect the content in which the supervision is undertaken. Instructional supervision is an internal mechanism adopted by principals to improve on their teaching and learning activities for the purpose of achieving educational objectives (Adeolu, 2012). Often times, teachers fail to do what they are expected of when not supervised. Some will decide to lazy around while others get involved in what will benefit them instead of being of benefit to the school and students.

Instructional supervision provides a vehicle and structure which allows schools, departments, as well as individuals (teachers and students) within them, to respond effectively to curriculum and instruction in order to achieve the stated educational objectives (Adetula, 2005). It is obvious that lack of supervision can lead to deviation from the lead down curriculum. The possibility of teachers going to their areas of interest is wide thereby allowing the learners so suffer afterwards. Supervision of instruction plays a major role by assisting teachers, guiding them stimulating them in their job performance. Good teachers do their work with little or no supervision but some sit up when they are informed that the principal is going round on supervision.

The principal has the sole responsibility to perform supervisory role and is also the chief accounting officer of the school. Pearson (2003) asserted that a principal is someone who is in charge of a school. Principal-ship is a well-established position for the chief executives in secondary schools who carries out leadership responsibilities by coordinating curricula, co-curricular activities in the school and is in charge of the general administration. He is also seen as the manager of the school and hence expected to be accountable and responsible for the day-to-day running of the school. Accountability is usually linked to the management of scarce resources (human and material) for the accomplishment of the stated goals in education. The Principal is the manager of these scarce resources, an administrator and the instructional leader that lead learners in a school. As such, he has a vast responsibility but the areas with the greatest impact must be given due attention which is student learning.

This can be achieved through effective supervision, monitoring, evaluation and dissemination of current information on educational issues as well as modern techniques of teaching which will stimulate the spirit of scholarship and best practices in curriculum delivery. It is difficult for the principal to address all the responsibilities within a school hence must prioritize time and energy on high-impact instructional area while other duties can be delegated. A principal is a visionary who through self-encouragement, determination, persistence, hard work and team spirit attain organizational (school) goals. The principal ensures effective supervision by interacting academically and socially on regular basis with teachers and students within and outside the classrooms. Olugboye (2004) added that the principal monitors to ensure proper implementation of the curriculum, desirable increase in teachers' capabilities, improve the conceptual knowledge and teaching skills; support them in their work to facilitate better performance in their pedagogical practices and students' learning outcomes. All these are geared towards the attainment of goal. Effectual supervision has a way of strengthening the capacities of both principal and teachers. It is important and needful for the improvement of the school performance.

Purposes of Educational Supervision

There are numerous purposes which supervision is expected to serve in the education system. For any visit to schools to be meaningful, the supervisor should have a clear understanding of

what he/she wants in terms of purpose and how he/she would go about it. The modern supervisor of schools should go to schools as a professional to meet the teachers as co-workers in the educational programmes. Some of the purposes of modern supervision include:

- To ensure that each individual teacher in the school has been performing the duties for which he/she will be paid or is being paid.
- To promote and develop a favourable setting for teaching and learning.
- To help the teachers improve – their status, skills, and knowledge.
- To ascertain the standard of educational performance.
- To check the available resources in each school.
- Ascertaining whether guidelines on specific government policies have been followed (e.g. on assessment, school registration, e.t.c.).
- To assess the climate or tone of the school and suggest remedial measures.
- To evaluate the success of new methods and theories.
- To motivate and encourage the teachers to develop healthy attitude towards work.
- For upgrading of schools.
- For fact-finding when there is crisis in schools.

The types of visit for school supervision can be classified, based on the purpose of the visitation as well as the length or extent of time spent. The identified three types of supervision in the school system are:

- Pastoral visit;
- Full general inspection;
- Subject inspection.

Pastoral visit: The Pastoral visit is usually done within one or two days. The maximum number of supervisors is between one and three. The visit is advisory. It is to find out what is happening on specific issues and give advice to the school management.

Full general inspection: The full inspection is conducted for a number of days by a team of supervisors. The main purpose is for administrative convenience. A school can subsequently be approved as centre for final examination .e.g. the West African Senior School Certificate Examination (WASSCE) or the National Examination Council (NECO).

Subject inspection: Subject inspection is a comprehensive visitation by subject specialists to ascertain the purpose and effectiveness of the teaching of specific subjects in the school curriculum.

Leadership Competence

Leadership is a communication process of influencing and directing people to commit to and achieve a shared goal voluntarily, in a given situation. A critical aspect of principal leadership is helping his staff to develop shared understandings about the school and its activities and goals that can undergird a sense of purpose or vision. Staff are often motivated by goals which they

find personally compelling, as well as challenging but achievable. Having the knowledge of such goals through principals' sense of leadership helps staff to make sense of their work and enables them to find a sense of identity for themselves within their work context thereby contributing towards the school goal achievement (Cárdenas et al., 2003). Principalship is a well-established position of the chief executive who provides leadership by coordinating curricula, co-curricular programmes and is responsible for the general administration of the secondary school. The principals being instructional leaders are at the vantage positions to supervise, monitor, assess, evaluate and disseminate current information on educational issues and modern teaching techniques to teachers in order to stimulate them for scholarship and best practices in curriculum delivery (Aykut et al., 2008).

At the same time, leadership is in many ways a shared responsibility. It engenders a common sense of commitment and collegiality among the staff. Effective school principals establish clearly defined goals for academic achievement, and they concentrated their available resources and their operations on attaining them, provide adequate time-table for teaching, routine check of lesson notes and subject dairies, observation of classroom instruction, continuously monitor students' progress to determine whether their instructional goals are being met, provide feed-back on student performance, motivation of teachers for improved performance, reinforcement of students for excellent performance, maintenance and appropriate usage of physical facilities, enforcement of discipline to ensure peaceful atmosphere, capacity building of teachers for effective service delivery and provision of instructional facilities and materials to enhance quality teaching-learning processes (Adeolu, 2012). Some of the principals' leadership practices that often help setting direction for teachers and students are identified by Leithwood, (2014) to include the following:

- Identifying and articulating a vision;
- Fostering the acceptance of group goals;
- Creating high performance expectations;
- Monitoring organizational performance;
- Promoting effective communication throughout the organization for shared organizational purposes

Leadership is that process in which one person sets the purpose or direction for one or more other persons and gets them to move along together with him or her and with each other in that direction with competence and full commitment. While clear and compelling directions contribute significantly to members' work-related motivations, they are not the only conditions to do so. Nor do such directions contribute to the capacities members of staff often need in order to productively move in those directions. Such capacities and motivations are influenced by the direct experiences members of staff have with those in leadership roles, as well as the school context within which teachers work. More-specific sets of leadership practices significantly and positively influencing these direct experiences include, for example: offering intellectual stimulation to teachers, providing individualized support to teachers and providing appropriate models of best practice and beliefs considered fundamental to the school system (Silva, 2016).

Effective Communication Competence

The effectiveness of a school is determined by the achievement of school goals. In today's competitive world, parents are more selective in the choice of schools for their children because they desire a school where their wards will be exposed to effective teaching and learning. Hence, it then becomes imperatives that a school develops a positive image of itself if it is to be relevant in the scheme of things. A school's positive image is influenced by the effectiveness of its teaching-learning environment. An effective school reflects, cares and shows concern for students' academic and moral progress. It promotes the progress of its students in a broad range of intellectual social and emotional outcomes. Essentially, schools that are effective and have the capacity to improve are usually led by principals who make significant and non-measurable contributions to the effectiveness of their staff members (Adeyemi, 2009).

School principals play critical and varied roles in the day to day operations of schools; being leaders, they monitor and support teachers through periodic communication on the ideas teachers can use to ensure students' academic progress. They also ensure discipline, and as administrative leaders, plan budgets, manage school facilities and develop productive communication relationships with the broader community (Atanda & Lameed, 2006). As the administrative head of schools, according to Abiodun-Oyebanji (2004), principals are to co-ordinate human and material resources toward the attainment of some pre-determined goals and objectives of their schools. They are expected to work with both the teaching and non-teaching members of their schools to harness material resources for the accomplishment of their school goals. They are equally to mobilise the efforts of their staff members towards the achievement of common goals (school goals). These roles are the administrative tasks of principals, which if not properly carried out may endanger the effective functioning of the entire school system. It is therefore imperative that principals keep abreast of all these tasks and regularly map out strategies to accomplish them, otherwise school objectives may be jeopardized.

One of these strategies is the principals' communication pattern. Principals' communication pattern can fast track the achievement of school goals if well handled by the principal, or hamper school effectiveness if it is poorly managed. In Nigeria, much effort has been geared towards improving the educational system. In line with international trends, one of the primary thrusts of these efforts has been on improving the management of communication in schools (Elmore, 2005). Strategic planning, education reform and school improvement have been the common strategies utilized in schools across the country. The emphasis is on the implementation of transformational management, the shift from quantity to quality, and the achievement of system-wide transformation as desirable goals.

While these efforts achieved some of the desired results, for instance schools having vision and mission statements, increased enrolment and retention and increased community participation, there has been an accusation that the Nigerian school system is not living up to expectations in terms of principals' communication pattern. It has been observed that many school principals do not carry their subordinates along in the day-to-day running of their schools. Many of the teachers often complain that they are aliens to many of the activities in their schools, due to the failure of their principals to intimate them of the everyday affairs of the school, of which they are major stakeholders. It is a known fact that information dissemination (whether verbal or electronical), is key to the management of any human or social organisation such as the school system, especially during this era of digitization, hence this aspect of the school system cannot be handled with levity.

Nwankwo (2014) lent credence to this, that information dissemination is fundamental to school management. According to him, people (teachers inclusive) need information to effectively do their jobs or take action. Each person or group, whether teaching or non-teaching staff therefore needs information in order to co-ordinate activities with others. For instance, teachers need information on the goals of the school and the best possible ways to achieve them; this must also be communicated to them from time to time by the school principal. On the other hand, the school principal equally needs information about almost everything in the school system- the resources (both human and non-human), the policies and strategies which must he accurately and promptly transmitted to the members of the school community (teachers, students, parents, etc.) as the case may be.

Principals' poor communication skills might be one of the reasons why (Osuji & Ndu 2002) stated that many teachers believed that they were not part of the school system because of the communication pattern of their principals which, many a time, excludes them from the day to-day running of the school. This often leads to teachers' poor job performance and ultimately ineffectiveness of the entire school system. It then seems that principals need new strategies that could enhance their effectiveness, among which is the adoption of effective communication patterns. Buttressing further the importance of communication in the school system, Carr (2005) suggested that in-service training in the art of effective communication could be of great help to school administrators in performing their primary duties as instructional leaders and organisation developers for continuous school improvement. According to Mitgang (2012), effective principals are to establish trust and create structures that promote principal-teacher communication (interactions) and maintain a high level of moral values. Also, Mills (2008) found a significant positive correlation between principal's communication pattern and school goal attainment. Rowland (2008) likewise revealed that principal's daily communication behavior plays a vital role in the environment of the school.

Research findings from diverse countries and different school contexts have revealed the powerful impact of the principal's communication processes to school effectiveness and improvement. Moreover, Olaleye (2013) found that principals get involved in academic activities of their schools, by observing and checking teachers and communicating adequately with them. Communication can, therefore, be described as the process of sending and receiving messages. It involves a transfer of thought through the exchange of verbal and non-verbal symbols leading to the recreation of meaning. It is the process by which one individual stimulates meaning in the mind of another.

Nwankwo (2014) described communication as the processes of access and transfer of information. All in all, effective communication must be a two way system where messages are not only transferred, but also received and understood by the receivers. The issue of communication becomes prominent as it determines the nature and mode of interaction to facilitate the form and functions of a school system. The total process of a school system involves communication of some sort, formal or informal. There must be some forms of interaction with things or people to bring about some reasoning that make for some adjustments in behaviour, and the end product of this interaction should ordinarily lead to the effectiveness of the school system. Communication is very imperative in the school system; especially at the secondary school level. Principal-teachers communication may affect school effectiveness if not well handled. Regular principal-teachers communication could enhance smooth running of a school and create a sense of belonging to teachers and non-teaching staff in the school context.

Through the pattern of communication, principal and teachers may partner to increase monitoring of student learning behaviours, and create a unified source of extrinsic motivation for students which may lead to higher achievement in school subject and in turn amount to school effectiveness. But as important as principals' communication is to the school system, one observes that many schools principals communication pattern is nothing to write home about because of the type adopted by some of them which fails to integrate the stakeholders (teachers, students, parents and community) in the activities of the school. Principals' communication pattern can therefore be described as the way and manner principals pass information to their subordinates and this is quite germane to the effective functioning of the school system. This pattern may be upward, downward, horizontal and face-to-face communication patterns among others. It all depends on what information a principal wants to disseminate. Upward communication entails the transfer of information from the subordinates to the superior. According to Ajayi and Ayodele (2002), such information is usually in form of or more of reports, suggestions, complaints and grievances.

An example of upward communication is from teacher to principal, from students to teacher; it is majorly from subordinate to super ordinate. This pattern of communication is critical to secondary school effectiveness and the school principal must have (his line of communication open from time to time so as to facilitate the achievement of school goals. This pattern of communication could also provide a means for the principal to ascertain if the information transmitted to the teachers for instance, has been well received and understood. This may in turn enhance the school effectiveness. Downward communication pattern on the other hand is used by the school principal to communicate directives, objectives, policies, procedures and other information to subordinates. It may be oral or written. It is usually from the superordinate to the subordinate. From principal for instance to teacher, from teacher to student. This is closely related to the chain of command system as it is very critical to school effectiveness. Horizontal communication pattern tends towards the transfer of information between two people who are of the same level in the organisation but in charge of different functions. For instance, the communication between Heads of Departments (HODs).

This may boost the exchange of ideas that can lead to easy achievement of school goals. The major purpose of horizontal communication is to coordinate educational activities on the same level. For instance, a principal can give information to another principal so that their activities or curriculum emphases would be similar in different schools. Heads of departments can also communicate among themselves. All these developments if well-handled, would lead to school effectiveness. Face-to-face communication pattern is very important if school numbers are to be motivated to do their best. This pattern of communication is quick, immediate and offers the total package or information contained in both verbal and non-verbal cues (Nwankwo, 2014). It enables the principal to have physical contact with the teachers, students, parents, etc and delivers the information raw and direct. This communication pattern also enhances effective management of the school system (secondary school inclusive). It then seems that it is only through the engagement of an appropriate communication pattern by a school principal that the members of a school system can be made aware of the school's goals and keep clearly in mind how their own works contribute to the attainment of these goals.

However, from observations, it appears that many secondary school principals' patterns of communicate in Oyo State secondary schools (which is the focus of this study) are not commensurate with the achievement of school goals. Some of them seem to embrace or encourage the usage of downward communication only, while upward, horizontal and face-to

face communication patterns are practically neglected. This then implies that, communication about the achievement of school goals and vision 2030 revolves majorly around many of these principals. They seem to take unilateral decisions without due consultation with their subordinates which many times results in the compromising of school effectiveness. This may even be one of the reasons for the abysmal performance of Oyo State secondary school students in external examinations such as WASCE and NECO over the years. Principal's day-to-day communication with staff members on routine decisions cannot be relegated to the background in the running of an effective school. Only through the deployment of suitable or appropriate communication patterns, that enable members of a school to understand how the works of others contribute to the achievement of school goals, can staff members be in a position to make suggestions for the improvement of operational procedure in the school organisation or system.

Management of School Plant

The school plant includes the material conditions such as the school building, furniture, playgrounds, hostels, classrooms, school libraries, apparatus and equipment's etc. These are the components of the school plant which are helpful in realizing the aims and objectives of education. Proper functioning of the school plant depends upon the quality and adequacy of the components of the school. Management is the arrangement of available human and material resources for the achievement of desired goals and objectives (Nwune et al., 2016). It is the productive use of available resources in an efficient and effective manner geared towards goals realization.

School plant also refers to everything within the school premises which includes the site, buildings, equipment and all essential structures, permanent and non- permanent as well as machines and laboratory equipment and others. Maintenance of school building is an organizational activity carried out by the school community in order to prolong the life expectancy of school buildings, its furniture and equipment. In order to start a school maintenance program the school building should meet a minimum standard of condition. A school maintenance program should ensure that the school building can: Function at its designed level at all times, function during the normal life span of the school building, resist the effects of an extreme natural event like hurricanes, floods, and earthquakes, provided that the original design, construction, and materials were satisfactory for these demands.

Maintenance of school plant implies that there is a malfunction of the building, equipment, or grounds and that there is need to restore it to appropriate condition. Scholars have given diverse definitions of the concept of school plant maintenance. According to Nhlapo (2006), school plant management refers to the general upkeep of physical facilities as found in school buildings, ground and safety systems. While Szuba and Young (2007) considered management as being concerned with ensuring safe conditions for facility users such as the learners, educators, parents or guardians, and is also concerned with creating a physical setting that is appropriate and adequate for learning. Ajayi (2007) took school plant management to include all activities embarked upon with a view to sustaining initial use value of the school plant. To Oguche (2011) stated that school plant maintenance involves "the keeping of the buildings, equipment and landscapes at their best condition of completeness and efficiency, either through repairs or replacement". Facility maintenance entails providing clean and safe environment for teaching and learning.

Okobia (2015) observed that school principals must possess a wide array of competencies in order to lead schools effectively towards the accomplishment of educational goals, which has led to changing expectations of what leaders need to know and must be able to do. Management is the possession of necessary skills to effectively manage resources for productivity. Ikediugwu (2016) and Lipham (2016) outlined functions of school administrators as including management of instructional programmes, staff personnel administration, students' personnel administration, finance and physical resource management and community relationship management. Effective management of human, material, time and financial resources is highly crucial for institutional sustainability and the development of school action plan. No meaningful institutional change can take place without effective management of school plant.

The term 'management' has been defined in various ways by different authors. Griffin (2003: 6) defined it as "a set of functions directed at the efficient and effective utilisation of resources in the pursuit of organisational goals." Terry and Franklin (2003: 4) are more specific about the activities involved in the performance of this function. According to them: Management is a specific process consisting of the activities of planning, organising, actuating, and controlling, performed to determine and accomplish stated objectives with the use of human beings and other resources.

Weihrich and Koontz (1999) defined it as the process of designing and maintaining an environment in which individuals, working together in groups, efficiently accomplish selected aims. A common idea in these and many other definitions is that management is goal-directed. These definitions convey the idea that management involves a series of on-going activities, individuals and groups working together using resources efficiently and effectiveness. All these ideas and terms are applicable to the management of the school plant. School plant management entails making and carrying out series of decisions in building a school plant according to need. It also involves operating and using it effectively and efficiently, while ensuring that it is in a functional state as the educational programme is being implemented.

School plant management involves a number of on-going and related activities – determining the need for school plants, educational programme planning, school facility or building design, building construction, furnishing and equipping the school, school plant operation, utilisation and maintenance and school plant modernisation or renovation, as the need arises. Fenker (2004) stated that facilities management is a process that ensures that buildings and other technical systems support the provisions of an organisation. School plant management ensures that school buildings and grounds, equipment, materials, technical and other service systems, facilitate and support the provision of education by a school.

The responsibility for managing the school plant rests with the head teacher or the school principal. The school head may not be knowledgeable in some aspects of school plant management such as school facility design and building construction, but his/her inputs and, in some cases, the inputs of other school staff during decision making in these areas may be necessary as it is the principal or head teacher and the staff that will make use of the buildings upon completion. It is the responsibility of the head of the school to ensure that the school plant is regularly maintained, i.e., kept at as near its original state as possible. It is also part of his/her responsibilities to ensure that the school plant is open for use effectively and efficiently on daily basis and that it is kept neat and tidy always.

In achieving these and other ends for which the school plant has been built, the head teacher or principal must make use of teachers, other school staff and students, detailing their duties and roles and coordinating their efforts to ensure that the right things are done at the right

time. Effective school plant management ensures that school facilities are effectively used for teaching and learning with little or no interruption.

CONCLUSION

The study concluded that principals' administrative competences enhance goal attainment in public senior secondary schools in Rivers State. Hence, the study has affirmed that application of various principals' administrative competence such as supervision, leadership, communication, professional and management of school plant will ultimately lead to goal attainment in public senior secondary schools in Rivers State. School administration primarily involves managing, administering the curriculum and teaching, pastoral care, discipline, assessment evaluation and examinations, resource allocation, costing and forward planning, staff appraisal relationship with the community, use of the practical skills necessary for surviving the policies of organisation such as decision-making, negotiation, bargaining, communication, conflict handling, running meetings and so on. All these tasks can be reduced to the following: planning, organising, directing, supervising, and evaluating the school system. These activities are those of the school principal who must ensure they are all directed towards efficient and effective teaching and learning in the school so as to be able to produce quality outputs. Therefore, it is safe to say that principals who apply these administrative competencies are capable of enhancing goal attainment in public senior secondary schools in Rivers State.

Suggestions

Based on the literature review the following suggestions where made:

- Principals should ensure they regularly attend training programs to strengthen and build new competencies that enhance administrative effectiveness for goal attainment in public senior secondary schools in Rivers State.
- Principals should take seriously supervision of teachers and students' activities to ensure compliance with school rules to ensure maximum goal attainment.
- Principals and school heads should expose themselves to leadership conferences where excellent leadership practises can be acquired to facilitate goal attainment in secondary schools in Rivers State.
- Principals should model a viable and effective communication channel to reach out to all stakeholders within the school for goals to be promptly achieved.

DATA DRIVEN DECISION MAKING TOOLS FOR EFFECTIVE SECONDARY SCHOOLS IN NIGERIA

Dorah Oinifieyanakuma GENTRY
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper examined data driven decision making tools for effective secondary schools in Nigeria. The Data-driven decision-making (DDDM) tools have become essential in improving the effectiveness of secondary schools in Nigeria. These tools enable educators, school administrators, and policymakers to make informed decisions based on empirical data rather than intuition. This study reviewed various DDDM tools, including Learning Management Systems (LMS), Student Information Systems (SIS), data analytics software, and artificial intelligence-based applications, highlighting their role in enhancing teaching, learning, and administrative processes. Moreover, the study examined the impact of these tools on student performance monitoring, resource allocation, and institutional management. It also identifies key challenges affecting their implementation, such as inadequate digital infrastructure, lack of technical expertise, and resistance to technology adoption. Additionally, the research emphasized the need for training programs, policy support, and collaboration between government agencies and private stakeholders to facilitate the widespread adoption of data-driven educational practices. The paper highlighted that integrating DDDM tools in Nigerian secondary schools enhances school efficiency, improves student learning outcomes, and promotes accountability in education. The study concluded that data-driven decision-making tools play a vital role in enhancing the effectiveness of secondary schools in Nigeria. Amongst others, the paper suggested that Government and Policymakers should develop and implement policies that mandate the integration of data-driven decision-making tools in secondary schools.

INTRODUCTION

Organizations and governments all over the world, individuals are regularly involved in planning activities both consciously and unconsciously. Education is a compound endeavor. It comprises of various processes of decision making concerning different issues and educational problems. The decision made could also be categorized as the collection of scarce teaching and learning resources, the enrolment of students, employment of teaching and non–teaching staff,

introduction of the new curriculum, student and staff discipline, staff training and methods of improving pedagogy, resource allocation and educational research, etc. (Oku et al., 2008).

Data as the pathway upon which business decisions ought to move in consonant with ought to be planned for (Adiele et al., 2010). For a firm to compete satisfactorily in any industry, it must recognize the importance of data gathering and data analysis. These will no doubt help to improve the productivity and efficiency of the business or organization. Data is very essential in any research experiment because it inhabits a central place in making decisions based on findings resulting from the investigation of such data. Given its central role, it follows that such an important asset as data, deserve effective planning and management in order to protect the integrity and provide an opportunity for effective problem solving which give rise to good decision making. The skills of data gathering and analyses are equally a prerequisite to arriving at an outcome that will be instrumental to solving the problem(s) at hand.

Educational institutions today face intense pressure from rapidly changing external environments and the needs of an ever-evolving global economy. These pressures are creating new demands on schools to produce effective students with skill to compete with the external world (Moran, 2009). To cope with these objectives, improving the quality of school effectiveness through the mobilization of teachers and providing them opportunities in school decision making.

In spite of the wholesome importance of data, it has been observed that most educational institutions have no record of relevant information or data gathered. At the point of decision making, it is often discovered that most data are misplaced when needed (Mark, 2017). In some cases, there is evidence of poor continuous assessment record management, student data, staff data, facilities data etc. leading to falsification in certain cases. The inadequacy of data planning practices in these areas hinders the ability of secondary schools teachers and administrators to make informed decisions leading to suboptimal resources allocation, resulting in wasted resources, unmet needs and inefficient operations. It also gives rise to reduced productivity and decreased stakeholders' satisfaction and compromised student outcomes, which leads to reduced academic achievement, lower graduation rates and decreased post-secondary readiness.

CONCEPTUAL CLARIFICATIONS

Decision Making

Decision making is a major responsibility of all administrators. It is the key function of every administrator that at every stage of the management process, he makes choices among alternative course of action. Heintx and Koontz in Nwankwoala (2016) that decision making is the selection of course of action from among alternatives. It is a central job of constantly choosing what to be done, who to do it and when and where to do it and at times how it will be done. Okumbe (1998) posited that decision making is the process of specifying the nature of particular problem and selecting among available alternatives in order to solve the problem. This definition of decision–making indicates that a problem precedes any decision and that there must be a number of alternative courses of action from which an optimum course will be selected. Knezevich (2009) stated that decision and decision making as follows:

A decision is defined as a conscious choice action from among a well-defined set of often competing alternatives. Decision making is a sequential process culminating in a single decision or series of decisions (choices) which stimulate moves or actions. The sequences of activities

called decision making result in the selection of course of action from alternative course intended bring about the future state affairs envisage.

Decisions are a composite of values, facts, and assumptions. Each or all of these may be subject to change from time. Decision making, therefore, is not a onetime activity but rather a continuing enterprise (Okumbe, 1998). Every successful organization must make decision that enable the organization to achieve its goal and which must meet the critical needs of members of the organization (Morphet et al, 1982). Moreover, Alkin (1992) stated that decisions are made daily in school about the conduct of work, the distribution of resources, and short term goals.

Decision involve policies (the definition of objectives), resources (people, money materials, and authority), and means of execution (integration and synthesis). Insofar as the value content of this type of decision is concerned, the school principal should identify two major values; policy decision that seek purposive action; executing decision that seek coordination of action (Wilson, 2007).

Thus, decision-making is very important and significant in school and in any organization at large to conduct work, distribute resources, plan short-term and long–term goals which bring about the future state of affairs as an intention, and activities of the school. Moreover, a school leaders' main job is to lead the school through effective decision making, and quite often they have to decide on what is to be done, who to do it, and when and where is to be done.

It is the process of choosing from among alternative course of action. It is also the process by which decisions are not only arrived at but implemented, for, as Hoy and Miskel (1982) in Ukeje et al (2000) until decision making is converted to action, it is only a good intention. A decision is the result of deliberation, calculation and thoughtful response to internal and external conditions of the environment. Cezar (2011) stated some prerequisites for making decision include:

- Clearly identify the objectives or goals you want to achieve;
- Gather as many information you can to assess your options;
- Elaborate several possible choices in accordance with your values;
- Reflect on the possible results of each course of actions and estimate if it is acceptable;
- Make a brief list of pros and cons, along with what you consider to be very vital, vital and less vital;
- Learn from previous experience and ask for opinions from those who had a similar situation to contend with.

Cezar (2011) opined that it is only after all the steps above were completed that people can make the decision and monitor their results to make sure they obtain the desired outcome. For simple and obvious choices we can rely on intuition, but for those that are complex and difficult to make closer look is needed. Cezar (2011) posited that people can rely on their intuition when the following happens:

- They are facing a time-urgent situation: In extreme situations such as fire and near death occurrence, even short delays caused by reasoning through a formal decision making process can result in a disastrous aftermaths.
- Conditions are dynamic or goals are ambiguous: If a situation is changing rapidly, then it makes sense of focus on a satisfying solution that can be quickly found.

The Nature of Decision Making

Decision making is the most aspect of educational management. In fact, some authors in the field of management suggest that management is decision making. Decision making is considered to be the "heart of management". In the process of planning, organizing, staffing, directing, reporting, and budgeting a manager makes decision (Newcombe & McCormick, 2001).

Decision making is applied in any of the organization activities. Griffith cited in Owen (1997) has highlighted three important concepts concerning the nature of decision making. These are:

- The structure of an organization is determined by the nature of its decision making process;
- An individual's rank in an organization is directly related to the control exert over the decision process; and
- The effectiveness of an administration is inversely proportional to the number of decision that he/she must personally make.

School administration at all levels along the hierarchy makes decision. The decision may ultimately influence the school's members. It can therefore be argued that, school principals who make decision on important school issue without adequate information do not facilitate to attainment of organizational goals and frequently lower the morale of members of the organization. As a result, the school principals should facilitate the process of decision making and the communication of those decisions to the members of the organization to attain the school goal and to enlarge the moral of teachers and other staffs. Moreover, since all decisions involve future events, the school principals should learn to analyze the certainty, risk and uncertainty associated with alternative course of action (Morphet et al., 1982).

Vroom-Yetton and Jaggon cited in Invacivich et al. (2005), effective leadership select the appropriate decisions set and permit the optimal participation of followers. This indicates that, even though decision making is an important managerial process, many decisions should be made by member of the groups.

TYPES OF DECISION

The different types of decisions taken by educational managers are some soft-landing directed by the different issues and problems to be handled. Educational managers are confronted with series of problems and issues ranging from recruitment and admission issues, to remuneration issues, supervision and disciplinary matters, etc.

However, some scholars have tried to categorize the different types of decisions. Thus Peretomode (1991) in Nwankwoala (2018) opined that there are two types of decision which are programmed and un-programmed decisions. Chiffith cited in Assefa (1999) classified decision into "individual and group decision, personal and organizational decisions, programmed and non-programmed decision intermediary, appellate and creative decisions, rational and non–rational decisions. In addition, other writers such as

Ivan et al. (2005) and Okumbe (1998) classified based on nature of the problem as programmed decision that is repetitive and routine activities and none-programmed decisions that is novel, unstructured, and new problem.

Programmed Decision

Nwankwoala (2018) stated that these are those decisions that are properly structured, repetitive and routinized and there are laid down rules and procedures for handling them. They are not high risks decision and as such can easily be delegated. School administrators (principals and headmasters or headmistresses) are known to make this type of decisions. Programmed decisions are also called routine decision. They are decisions taken every now and then. Adiele (2020) stated that programmed decision is a process to be followed in making decision is already laid down. The procedures to be followed in arriving at a programmed decision have already been prescribed and specified. Example is the admission of students into tertiary institutions is based on an existing rule of five credits including Mathematics and English. In this type of decision the educational leader do not need to task himself so much about what should be done, but rather rely on established rules. Other example suffices here: where there exist rules that:

- Guide employment procedure: for example rules that specify the employment of teaching staff based on teaching qualifications;
- Specify the allocation of offices to academic staff based on seniority;
- Guide the promotion of staff based on three years interval period;
- Guide admission process: For example the quota system of admission into tertiary institutions and the policy of indigenes and non-indigenes in state owned tertiary institutions.

The educational implication of the above is that the educational leaders can develop rules and procedures to guide the routine activities of the educational institutions that he superintends by specifications. Thus, the likelihood of error is greater in un/non-programmed decisions than in programmed decision making.

Un-programmed/Non programmed Decision

Nwankwoala (2018) posited that these are uncommon and unique decisions. They are always new and are high risks in nature. They are not laid down programs, rules and regulations for handling the problems that can lead to such decision due their newness. Un-programmed decisions may demand greater expenses. An example of an un-programmed decision that can be taken by a school manager is a decision to construct a new classroom block or workshop house. Okoroma (2016) stated that the making of un-programmed decision demands that administrators should rely heavily on their problem-solving abilities, creativity, intuition and tolerance. In fact, the ability of school administrators to make good un-programmed decisions portrays their effectiveness in managing school affairs. On the other hand, managers of schools who are unable to un-programmed decisions obviously showcase their ineffectiveness.

Individual and Group Decisions

Individual and group decisions are kind of decision based on a number of people involved in decision making process. Based on the nature of the problem and the situation, some decisions may be made better by group, while others may be handled by individuals. As pointed out by Newsrom and Pierce (1990) stated that the question of decision making by individuals or

involving other should not be determined by leader personal preference, but by the nature of the problem and the situation.

Smith (2011) on his part underlined that individuals and not group, can usually reach more efficient decision for issues that are relatively simple in their elements, which are objectively and easily separable, and where the issue requires a strict sequence of acts that can be performed readily by single person.

Group decision making is sometime referred to by other writers as participative decision – making, collective judgment management or plural management (Jake, 2008). Aggrawal (1982) stated that in large and complex organization most of the basic and strategic decisions are made by a group of managers rather than by individuals. Decisions relating to the determinant of the organizational objective and formulation of plans, strategies and policies fall in this category.

Today important decisions are made by group than individuals. This is because there is great deal of information available in a participative decision–making process. Supporting this idea, Chanda cited in Ike (2010) stated that group decision would become particularly appropriate for non-programmed decisions because these decisions are complex and few individuals have all knowledge and skills necessary to make the best decisions. This implies that groups can make higher quality decision than individuals because different ideas come together from different groups and select the best form the given alternatives.

Thus, in school context, the school principals are not the only person that makes decision and the other people like teachers implement the decision without involving on the issues; and also the others should to accept the decision to agree with the action to be chosen. Supporting this idea, Sunday (2001) stated that schools principals no longer make decision on their own. That is because they need information and advice from several sources especially teachers and pupils to act rationally.

Generally, decisions may be taken either by an individual or groups. Even if the group decision making may have its own limited disadvantages in school organizations, making the decisions by group is preferable than one individuals. As argued by Richard, (2013), group decision can bring more resource to many decisions than a single individual. Different people bring a variety of information, ideas, and viewpoints. Moreover, group decision helps to facilitate the identification of creative and innovative solution to the problems through participating staff members.

Furthermore, Graffiths (1999) in Nwankwoala (2016) on making his own view categorized decision making in three which are:

- Intermediary decisions
- Appellate decision
- Creative decision

Adiele (2020) stated that decision making can be classified into different categories depending on the level and source it is emanating from which include:

- Classification based on the level and source of decision; and
- Classification based on the nature of decision.

Adiele (2020) posited that classification based on the level and source of decision is of two types which are intermediary and appellate decision making processes.

Intermediary Decision

This type of decision does not originate with the school administrator. It is normally delegated to him/her by a superior in the organizational hierarchy. Adiele (2020) and Oku et al (2008) stated that decision making here is in response to an authoritative request or directives from a superior officer to a subordinate for an assignment to be carried out. Example of such is the school board. The school's board may direct the principal or headmaster to take certain recommended decision or a particular decision can be frustrating to the school principal, especially where the effect of the decision is uncertain or will create negative impact on the superior or other people around.an example of this decision could be a directive from the school's board to the principal or headmaster not to allow any student who is owing school fees or any other fees to seat for examination. This is why phrases like 'I am directed' or 'I am instructed to' are used in the course of conveying this type of decision.

Appellate Decision

Decisions are regarded as appellate when they are taken in respect of cases brought by subordinates (Adiele, 2020). Examples of such decision are the ones made to settle conflicts brought by teachers, students and other members of the school staff. Appellate decisions are also requests from the principal to the superior body (State Education Management Board, (SEMB)) for certain action to be taken in the schools.

DECISION-MAKING PROCESS

Adiele (2020) opined that the basic task in the decision-making process begins with the decision maker asking fundamental questions like:

- What decision should be made (over a given problem, issue, threats etc.) and the strategy, tactics and operational design to be adopted in making such decision?
- Who should execute or implement such decision? (an individual or through collective action)
- When should a decision be made? (proactive or provoked decision)
- How should a decision be made? (should be it be intuitive or informed decision)

The above questions are basic and serve as a guide to good decision making. The decision making process involves some defined tasks that are operationally linked and systematically carried out for the purpose of achieving the decision taken. The activities are in logical sequence, which however, does not follow any commonly acceptable number of tasks. Various scholars of organizational management have different steps and tasks in decision making process.

Steps	Jones and George (2009)	Meshane and Von Glinow (2000)	Hoy and Miskel (2008)	Ukeje, Okorie and Nwagbara (1992)
1	Recognize the need of the decision	Identify problem or opportunity	Recognize and define the problem or issue	Recognize and define the problem or opportunity
2	Generate alternatives	Choose the best	Initiate action plan, program,	Analyze the difficulties

		alternative style	communicate, monitor, appraise	in the existing situation
3	Assess alternatives	Develop alternative solutions	Develop a plan or strategic action, identify possible alternatives, consider probable consequences, select action course.	Establish goals and objectives: criteria for problem solution
4	Choose among alternatives	Choose the best solution	Establish criteria for satisfactory solution	Generate alternatives
5	Implement the chosen alternatives	Implement selected alternative	Analyze the difficulties, classify the problems, collect data, specify problem	Gather information
6	Learn from feedback	Evaluate decision outcome		Evaluate the alternatives
7				Choose the best alternative
8				Implement decision

Figure 1: The Decision Making Process of various scholars Chart. Source: Adopted from Adiele (2020).

Different Data Needed for Decision Making in Schools

The following are data needed for decision making in secondary schools:

Students' Data

Administrators and teachers are always using various means to collect students' data which are used in doing a lot of things in the school. This data allows teachers to measure and compare student performance against goals and also in making decisions. Based on those results, teachers can decide how to proceed with their classes. The effectiveness of student data has to do with its timing. Regular and repetitive assessments give teachers and administrators the data they need to effectively guide their approaches with students. Student performance is not the sole responsibility of the school administration, the teachers, or even the students themselves. It is a team effort, and everyone has a role to play in regularly using student data to improve learning experience (Jake, 2008).

Student data is a valuable resource that can provide insights into various aspects of a student's academic journey. Understanding and interpreting this data can help educators make informed decisions, personalized teaching strategies, and ultimately improve student outcomes. Ibara (2018) gave the importance of student data which looked at seven examples of student data and what can be seen in them. They include:

- Demographic information;
- Academic performance data;
- Behavioral data;
- Attendance records;
- Socio-emotional learning data;
- Health and wellness data;
- Technology usage data.

Demographic Information

Demographic information provides a broad understanding of the student population, including factors such as age, gender, ethnicity, and socioeconomic background (Ibara, 2018). By analysing demographic data, educators can identify potential disparities and ensure that educational resources are distributed equitably.

For example, by examining the age distribution of students, educators can determine if there is a need for specialized programs or resources for different age groups. Similarly, analysing the gender distribution can help identify any gender-related gaps in academic performance or participation in certain subjects.

Furthermore, understanding the ethnic and socioeconomic background of students can shed light on any disparities in access to educational opportunities (Adiele, 2020). This information can guide educators in implementing targeted interventions to support students from underrepresented backgrounds and promote inclusivity in the learning environment.

Academic Performance Data

Academic performance data encompasses student scores, grades, and overall achievement in various subjects. Analysing this data helps educators measure student progress, identify areas of strength and weakness, and make data-driven decisions to improve overall academic performance (Ibara, 2018). Examining student scores and grades, educators can identify patterns and trends in academic achievement. This information can help them identify students who may need additional support or enrichment opportunities. For example, if a student consistently performs poorly in mathematics, educators can provide targeted interventions to improve their understanding of the subject.

Moreover, analysing academic performance data can also help educators evaluate the effectiveness of instructional strategies and curriculum materials. By comparing student performance across different classrooms or schools, educators can identify best practices and share them with their colleagues to enhance teaching and learning outcomes.

Behavioural Data

Behavioural data includes information about student behaviour in the classroom and beyond. It provides insights into student engagement, attitude, discipline records, and social interactions (Zino, 2010, Ibara, 2018). Analysing behavioural data helps educators understand the factors influencing student behaviour and implement effective strategies to substitute a positive and inclusive learning environment. For instance, by examining student engagement levels, teachers can identify students who may be disengaged or struggling with motivation. This information can guide them in designing or engaging extra lessons and activities to increase student involvement and interest in learning.

Furthermore, analysing discipline records can help teachers identify any recurring behavioural issues and implement appropriate interventions. By understanding the underlying causes of disruptive behaviour, teachers can work with students, parents, and other stakeholders to address these challenges and create a supportive and respectful classroom environment.

Attendance Records

Attendance records trail the presence or absence of students in the classroom. By analysing attendance data, teachers can identify patterns and recognize students who may require additional support or interventions due to prolonged absenteeism (Ibara, 2018). It helps ensure that every student has equal opportunities to engage in the learning process.

By examining attendance data, teachers can identify students who frequently miss school and may be at risk of failure in academics. This information can apt teachers to implement strategies such as personalized catch-up plans or additional tutoring to support these students in their learning journey (Okeke, 2009). In addition, analysing attendance records can also help identify any systemic issues that may be affecting student attendance, such as transportation challenges or health-related barriers. By addressing these issues, teachers can create a more inclusive and supportive learning environment for all students.

Social-Emotional Learning Data

Social-emotional learning data captures information about a student's emotional well-being, social skills, and mind-set. By understanding this aspect of a student's development, teachers can implement directed interventions to promote self-awareness, self-management, social awareness, relationship skills, and responsible decision-making (Ibara, 2018).

For example, by analysing social-emotional learning data, teachers can identify students who may be experiencing high levels of stress or anxiety. This information can guide them in implementing strategies such as mindfulness exercises or counselling services to support students' mental health and well-being.

Furthermore, understanding students' social skills and relationship-building abilities can help educators create a positive and inclusive classroom environment. By identifying students who may struggle with social interactions, teachers can provide opportunities for peer collaboration and implement social-emotional learning programs to improve students' interpersonal skills.

Health and Wellness Data

Health and wellness data provides insights into a student's physical health, including medical conditions, allergies, medications, and overall well-being. By considering this data, teachers can ensure that appropriate accommodations and support are provided to optimize a student's learning experience (Ibara, 2018). The analysis of health and wellness data, teachers can identify students with specific medical conditions or allergies that may require special attention or accommodations. This information can help create a safe and inclusive learning environment where students' health needs are met.

Moreover, understanding students' overall well-being can help teachers implement strategies to promote a healthy lifestyle. By considering factors such as nutrition, physical activity, and sleep patterns, educators can provide guidance and resources to support students' overall well-being, which can positively influence their academic performance.

Technology Usage Data

Technology usage data helps teachers understand how students engage with technology in the learning environment. This data reveals patterns, preferences, and proficiency levels, which allows teachers to integrate technology effectively into their instruction to develop student engagement and promote digital literacy (Cezar, 2011).

Teachers can identify students' preferred learning platforms and tools by analysing technology usage data. This information can guide them in selecting appropriate digital resources that align with students' interests and learning styles, ultimately enhancing their engagement and motivation.

Furthermore, technology usage data can help teachers assess students' digital literacy skills. By understanding students' proficiency levels, teachers can provide targeted instruction and support to develop essential digital skills necessary for success in the digital world.

Staff Data

Adele (2020) posited that there are 12 (twelve) different types of employee data and their significance. Each type serves a distinctive purpose, from informing diversity initiatives to enhancing employee engagement and improving your hiring processes.

Personal Information

This includes names, dates of birth, and addresses. The information helps in identifying employees within an organization. It is also the initial set of data collected in the employee lifecycle, for administrative, legal, and emergency purposes (Adiele, 2020).

Demographic Information

Demographic information here include the following: age, gender, ethnicity, disability status, veteran status (Emenike, 2012; Ibara, 2018). The **p**urpose of collecting the information includes**:**

- Demographic data is important for developing diversity and inclusion strategies. It informs targeted initiatives to enhance workplace equity and representation.
- Equal opportunity monitoring (EOM) and reporting, ensuring adherence to legal standards.

Job-Related Data

Job-related data include information like position, department, job description, start-up date, employment details and status (full-time, part-time, contract, etc.), work location, and office assignment (Adiele, 2020). The need of the information in an organization includes:

- It highlights current workforce capabilities and identifies gaps. For example, it helps pinpoint areas where additional hiring is needed, whether for specific skills, roles that are currently unoccupied, or to enhance departmental capabilities.

- It shows workforce distribution and structure. This allows for a clear view of how employees are spread across various departments and locations. It can reveal whether certain areas are understaffed or overstaffed.

Compensation and Benefits Data

Owhondah (2018) stated the following information are all inclusive in the compensation data. Salary, bonuses, overtime pay, commissions, pay raises and history, pay grades and bands, equity or stock options while benefits data include health insurance, retirement plans, paid time off (PTO), parental leave, wellness programs, educational assistance, and any other perks like gym memberships, relocation assistance, free meals, etc. The purpose of the information given in compensation and benefit data include:

- It helps identify pay disparities to achieve fairness internally and in comparison to the industry.
- It ensures compliance with compensation-related laws and regulations, such as equal pay for equal work, overtime pay, and minimum wage.
- It aids offer benefits based on employee preferences and cost-effectiveness.
- It helps analyze the impact of compensation and benefits on employee retention, satisfaction, and recruitment efforts.

Attendance and Time Tracking

The information required in attendance and time tracking include **b**asic attendance data (clock-in and clock-out times, total hours worked, late arrivals, early departures; Time off and leaves (paid time off (vacation days, sick leave, and personal days), unpaid time off, maternity/paternity leave, bereavement leave, jury duty and other statutory leaves); Advanced time tracking: project time tracking, overtime tracking (including overtime rates where applicable), break times (logs the duration and frequency of breaks taken during the workday) (Adiele, 2020). The goal of collecting the attendance and time tracking includes
:

- Helps ensure adherence to local and federal labor laws regarding work hours, overtime, breaks, and minimum wage requirements.
- Detailed reports on attendance patterns, absenteeism rates, and other relevant metrics help management review employee attendance. For example, it helps identify patterns, such as recurring absenteeism or frequent late arrivals.
- Track of accrued and used PTO, sick leave, and other time off types, provides visibility for both employees and managers.
- Correlates work hours with output metrics to measure productivity levels.
- Helps calculate labor costs associated with projects, departments, or the entire organization.

Educational and Professional Background

Adiele (2020) and Owhondah (2018) stated that the employee is required to give the following information like Educational background: Degrees and certifications, institutions attended, field

of study, academic achievements (example: awards, scholarships); Professional experience: Previous employers, past job titles, skills (including both hard skills and soft skills), notable accomplishments received in previous positions, ongoing learning and development activities (including workshops, seminars, and courses); and additional qualifications like languages, volunteer experience, publications and patents, professional memberships. The above information helps to:

- Assess if the employee is fit for current and potential future roles.
- Identify candidates for succession planning and leadership development programs.
- Tailor training and development initiatives to address individual and organizational needs.
- Cultivate an environment that prioritizes ongoing learning and career development.

Emergency Contact Information

An employer requires the following information from an employee for emergency contact information. They include: Basic Contact Details: Contact's name, relationship to the employee; Contact Information: Primary phone number, secondary phone number (if any), email address, physical address; Special Instructions: Preferred method of contact, any additional notes or relevant information the emergency contact or employee thinks the organization should be aware of (e.g., specific medical conditions, preferred hospitals or doctors) etc. The aim of the above information is:

- To ensure the safety and security of employees during emergencies or critical situations. This information allows organizations to quickly reach out to designated contacts in case an employee faces a health issue, accident, or any emergency while at work or during business-related activities.

Legal and Compliance Documents

In this legal and compliance document, Sunday (2001) stated the following are captured in it which are**:**

Job responsibilities, salary, benefits, confidentiality obligations, termination conditions; Tax Documents: W-4s or equivalent forms for tax withholdings, W-2s or 1099s for year-end tax reporting; Work Eligibility Verification: e.g: Required identification documents (e.g., International passport, voter's card, driver's license, National ID, others); Background Checks: Criminal, financial, and employment verification reports; Policy Acknowledgments: Employee signatures on company policy documents, such as codes of conduct and privacy policies; Training Records: Documentation of mandatory compliance training completions (e.g., sexual harassment, data protection); Licenses and Certifications: Details of required professional licenses or certifications, including expiry and renewal information; Disciplinary Records: Documentation related to disciplinary actions, reasons, and outcomes; Accommodation Requests: Records of requests and approvals for accommodations under disability laws or other

relevant statutes and Audit Documentation: Records demonstrating compliance with legal and regulatory standards, used for audits. The purpose of this information are to:

- Ensures adherence to laws and regulations, avoiding penalties and reputational damage.
- Documents agreements and policies that safeguard employee interests and rights.
- Provides a basis for resolving disputes with factual documentation.
- Tracks completion of mandatory training sessions, especially those related to compliance, ethics, and safety.

Zino (2010) and Richard (2013) stated the information require in performance and goals are: Performance Metrics: innovation and initiative contributions; Goals and Objectives: Individual goals (SMART objectives aligned with roles), team goals (collective objectives for collaboration), and organizational objectives (e.g., revenue targets); Performance Reviews and Feedback: Self-assessments, manager assessments, peer feedback, and continuous feedback throughout the year for ongoing improvement and Development and Growth: Professional development plans for career growth and performance improvement, succession planning details including readiness for higher roles and development needs. The following information will assist in recognizing achievements and areas for improvement, guiding performance management processes.

Training Programs: Details on completed, ongoing, and planned courses, workshops, and seminars, including content focus and completion date; Skills and Competencies: Specific skills or competencies gained from training, relevant to the employee's role and organizational goals; Development Plans: Customized plans outlining career progression opportunities and required training; Effectiveness and Feedback: Evaluations of training impact on performance and skill applicability; Compliance Training: Documentation of completed mandatory training for regulatory compliance and Training Investment: Data on costs and resources allocated to training and development, supporting budgeting and investment analysis (Jake, 2008). The purpose of gathering the information is to:

- Identifying development opportunities for employees
- Aligning training programs with organizational goals
- Links training programs to performance improvements, helping to identify the most effective initiatives for enhancing employee productivity and quality of work.
- Measures the impact of training and development investments on business outcomes

Sandling (2009) stated the various information are seen in the exit and records information. They are:

Reasons for Leaving: Categorizes exits such as resignation, retirement, termination, or layoff; Exit Interview Summaries: Insights and key takeaways from exit interviews, with suggestions for organizational improvements; Last Day of Employment: The employee's final working day, important for administrative closure and security protocols; Employment Length: Duration of the employee's tenure with the organization**;** Termination Details: For involuntary exits, details including the rationale for termination, documentation of the process, and any legal considerations; Post-Employment Information: Information on whether the departure was

amicable and if the individual is eligible for rehire and Turnover Rates: Calculation of turnover metrics (Mark, 2017; Tobi, 2010)). The aim of collecting the various data includes:

- Provides insights into employee turnover. Analyzing the reasons behind employee departures, and identifying patterns or trends may indicate underlying issues within the organization, such as management practices, compensation, work-life balance, or career development opportunities.
- By understanding why employees leave, organizations can develop targeted retention strategies.
- Insights from exit data can highlight skill gaps and competencies to look for in new hires. It also helps refine succession planning processes.
- Documentation related to terminations, especially involuntary ones, is necessary for legal compliance. It helps make sure that the organization has followed fair and lawful processes, which can be important in the event of disputes or legal challenges.
- Helps manage costs related to recruitment, hiring, and training by reducing turnover.

Ibara (2018) posited that facility data refers to information related to the physical environment and resources of an educational institution, such as:

- Building and room usage;
- Maintenance and repair needs;
- Energy consumption and sustainability;
- Technology infrastructure;
- Safety and security measures;
- Accessibility and inclusivity features;
- Space utilization and optimization;
- Asset management and inventory;
- Environmental conditions (e.g., temperature, lighting, air quality);
- Compliance with regulations and standards

Akuth (2017) stated that effective facility data planning involves the following key components:

Asset Management: Tracking and managing facilities assets, including condition, age, and performance, is crucial for making informed decisions about replacement, upgrades and maintenance. Asset management involves asset clarification and categorization, condition assessment and scoring, lifecycle analysis and planning and resources allocation and budgeting.

Space Management: Analyzing space usage, allocation and optimization is necessary for maximizing space efficiency, reducing waste and improving occupant productivity. Space management involves space inventory and mapping; occupancy analysis and reporting; space allocation and reallocation and workspace design and optimization (Akuth, 2017).

Maintenance Planning: Using data to schedule and prioritize maintenance activities is essential for extending assets lifespan, reducing downtime and improving overall facility condition. Maintenance planning involves predicative maintenance scheduling; preventive maintenance planning; reactive maintenance management and maintenance cost analysis and reporting (Jake,

2008; Ibara, 2018). Facility data is one of the essential data required for effective decision-making in educational institutions which cannot be overemphasized. Here are some ways facility data can inform decisions (Ike, 2010; Sandling, 2009 & Smith, 2011):

- Space optimization: Analyzing usage patterns and capacity to identify opportunities for better space utilization.
- Maintenance and repair: Identifying areas needing maintenance or repair to prevent costly fixes and ensure student safety.
- Energy efficiency: Monitoring energy consumption to reduce waste, lower costs, and minimize environmental impact.
- Capital planning: Informing decisions on renovations, expansions, or new construction projects.
- Budgeting: Allocating resources effectively based on facility needs and priorities.
- Safety and security: Identifying potential risks and taking proactive measures to ensure a secure environment.
- Compliance: Ensuring adherence to regulatory requirements and standards.
- Student experience: Creating a comfortable and supportive learning environment.

Sustainability: Implementing eco-friendly practices and reducing the institution's carbon footprint.

Strategic planning: Integrating facility data into long-term planning and goal-setting.

By leveraging facility data, educational institutions can make informed decisions, optimize resources, and create a better learning environment for students. Jones and George (2009) stated some additional ways facility data can be used for effective decision-making:

- Identifying trends: Analyzing data to identify patterns and trends in facility usage, energy consumption, and maintenance needs.
- Predictive maintenance: Using data to predict when maintenance or repairs are needed, reducing downtime and extending equipment lifespan.
- Energy benchmarking: Comparing energy usage to similar institutions or benchmarks to identify areas for improvement.
- Space allocation: Optimizing space allocation based on program needs, student enrollment, and faculty requirements.
- Emergency preparedness: Using facility data to inform emergency response plans and ensure business continuity.
- Compliance reporting: Generating reports to demonstrate compliance with regulatory requirements and standards.
- Stakeholder engagement: Sharing facility data with stakeholders to promote transparency and collaboration.
- Data-driven design: Using facility data to inform design decisions for new construction or renovation projects.
- Operational efficiency: Streamlining operations and reducing waste by analyzing facility data.

- Return on investment (ROI) analysis: Evaluating the financial impact of facility-related decisions and investments.

Kitty (2001) stated that the effective ways to use facility data for decision making include:

- Data analytics: Applying statistical methods to identify trends and patterns.
- Data visualization: Presenting complex data in a clear and actionable format.
- Benchmarking: Comparing facility performance to similar institutions or industry standard.
- Predictive modelling: Using data to forecast future facility needs and optimize planning.
- Collaboration: Sharing facility data with stakeholders to promote transparency and informed decision making.

School Project Data

Okeke (2009) stated some of the variables of school project data that assist in decision making in secondary schools include:

Project completion rate:
- Identifies students needing extra support or accommodations.
- Informs teacher professional development needs.
- Helps evaluate project effectiveness and adjust instructional strategies.

Project grades:
- Evaluates student performance and understanding.
- Identifies areas for curriculum refinement.
- Informs student placement and advancement decisions.

Project complexity:
- Ensures projects align with learning objectives and outcomes.
- Helps teachers scaffold instruction and support.
- Informs decisions on resource allocation and budgeting.

Student engagement:
- Identifies strategies to boost motivation and interest.
- Informs teacher professional development needs.
- Helps evaluate project effectiveness and adjust instructional strategies.

Collaboration and teamwork:
- Evaluates student ability to work effectively in teams.
- Identifies areas for social-emotional learning support.
- Informs decisions on group project assignments and pairings.

Critical thinking and problem-solving:
- Evaluates student critical thinking and creativity.
- Identifies areas for curriculum refinement.
- Informs decisions on instructional strategies and resource allocation.

Communication skills:
- Evaluates student ability to effectively communicate ideas.
- Identifies areas for language arts and presentation skills support.
- Informs decisions on project presentation formats and expectations.

Time management:
- Identifies students needing support with organization and prioritization.
- Informs teacher professional development needs.
- Helps evaluate project effectiveness and adjust instructional strategies.

Resource utilization:
- Tracks resource usage and identifies areas for optimization.
- Informs decisions on budgeting and resource allocation.
- Helps evaluate project effectiveness and adjust instructional strategies.

Mentor or teacher feedback:
- Provides targeted support and guidance for students.
- Informs teacher professional development needs.
- Helps evaluate project effectiveness and adjust instructional strategies.

Sunday (2001) and Temi (2018) stated that by analyzing school project variables, secondary schools can:
- Enhance project-based learning experiences
- Optimize instructional strategies and resource allocation
- Identify areas for student support and intervention
- Evaluate program effectiveness and inform decision-making
- Foster a culture of innovation, creativity, and critical thinking

Academic Performance Data

Owhondah (2018) and Ibara (2018) stated some of the information that is required from administrators and teachers in stating the academic performance of students in the school as:

- Grades: GPA (Grade Point Average), individual course grades, or standardized test scores. This is used to appraise student performance, identify areas for improvement and determine eligibility for advanced courses or graduation.
- Attendance: Number of absences, tardiness or attendance percentage. This is used to identify attendance patterns, checkmate truancy and provide support for students struggling with attendance
- Course completion: Number of subjects offered, courses passed and failed. This is tracked to ensure students meet graduation requirements, identify course sequencing issues, and inform scheduling decisions.
- Standardized test scores: This include WAEC, NECO, JAMB and other national examinations. This is used to evaluate the growth of students, compare performance across schools, and provide targeted feedback to students
- Assignments and assessments: Scores on quizzes, exams, projects, or homework. It is used to refine instruction, adjust assessment strategies, and provide targeted feedback to students.
- Learning outcomes: It measured to assess mastery of specific skills or knowledge, often measured by titles, inform instruction, and adjust curriculum pacing.
- Progress tracking: Improvement over time, such as growth in reading levels or mathematics skills. This is used to identify students needing additional support, adjust instruction, and provide early intervention.
- Behavioral data: Disciplinary actions, engagement, or motivation metrics.

- Demographic data: Student characteristics like age, gender, ethnicity or socioeconomic status.

These variables according to Wali (2017) can be used to identify areas of strength and weakness; student placement and scheduling; inform instruction strategies and resource allocation; teacher professional development; evaluate program effectiveness and also conduct research and predictive analytics.

PRINCIPALS AND TEACHERS PARTICIPATION IN DECISION MAKING USING RELEVANT DATA

The principle of Management by Objectives (MBO) in Obanya (2014) stresses collective decision making and policy formulation, setting goals, steps and expectations for effective and efficient realization of organizational goals and objectives. This implies that both principals and teachers (their subordinates) should be involved in decision making in schools. However, it must be noted that the involvement of subordinates could have better positive and negative consequences. Thus, Hoy and Miskel (1982) in Nwankwoala (2016) advised that the issue should not be whether to involve them or not, but under what circumstance and conditions should subordinates be involved in decision making.

This brings about the concept of zone of acceptance which is the career within which subordinates are willing to comply with some administrative directives without question and the range of actions they are willing to take at the administrators' (principals) request. There are also situations where by school administrators are in dilemma of how to improve on the effectiveness of decision taken. These results from the fact that decisions that would objectively work best might not be acceptable to the people affected. On the other hand, decisions that are most supported by subordinates may not be the best one to make. So there are always a problem when quality considerations conflict with acceptable consideration. On this same grounds, Maier (1963) in Okoroma (2016) stated two criteria for assessing decision effectively. They are:

- Objective quality of the decision which deals with how well the administrator carries out the formal decision making process (i.e. diagnoses of the problem, collection of alternatives etc.) in a case of technical problem, a quality decision may be enough to solve it.
- Acceptance of the decision by those who must execute it. If people are involved in the problem, quality decision may not be enough. Okoroma (2016) suggested that problem situations should be evaluated or assessed to ensure the type of problem and see how it could be addressed for solution to quality and/or acceptance.

Effective Decision Making in Secondary Schools

Effective decision making in secondary schools entails the process of making informed, thoughtful and well-reasoned choices that support students learning, school improvement and organizational effectiveness. Decision making is a critical leadership function that can impact students' outcomes, teachers' effectiveness and school culture (Leithwood & Jantzi, 1999). Effective decision making involves considering multiple perspectives, evaluating evidence and

choosing options that align with school goals and priorities. Some several key components of effective decision making in secondary schools:

Data driven decision making: Using data and evidence to inform decisions about instruction, assessment and other student support (Rothman, 2006). This involves:

- Collecting and analyzing data on students' performance and progress
- Using data to identify areas for improvement and inform instructional decisions
- Evaluating the effectiveness of instructional strategies and programs

Collaborative decision making: Involves teachers, administrators and other stakeholders in the decision making process to build ownership and support (Leithwood & Jantzi, 1999). This involves building a collaborative culture and trust among stakeholders; encouraging open communication and feedback and fostering a sense of shared responsibility and ownership

Student-centered decision making: Prioritizing students' needs and interests in decision making to ensure that choices support students learning and well-being.

Strategic decision making: Aligning decisions with the school goals and priorities to ensure that choices support long-term improvement (Hill, 2007). This involves developing a clear vision and mission for the school; establishing clear goals and priorities and ensuring that decisions align with the school goals and objectives.

Reflective decision making: Reflecting on decision and their impact to identify areas for improvement and refine decision making processes (Emenike, 2012). This involves reflecting on decisions and their impact, evaluating the effectiveness of decisions and refining decision-making processes and strategies

SOME BENEFITS OF EFFECTIVE DECISION MAKING

Studies have shown that effective decision making in secondary schools can lead to numerous benefit which include:

- Improved students outcomes: Data driven decision making can lead to increased student achievement and reduced achievement gaps (Rothman, 2006).
- Enhanced teacher effectiveness: Collaborative decision making can lead to increased teacher motivation and job satisfaction (Leithwood & Jantzi, 1999).
- Stronger school culture: Student centered decision making can lead to increased student engagement and motivation (Marzano, 2007).
- Better accountability: Reflective decision making can lead to increased transparency and accountability in decision making (Schon, 1983).
- Increased efficiency: Strategic decision making can lead to improved resource allocation and reduce waste (Hills, 2007).

CHALLENGES AND LIMITATIONS TO EFFECTIVE DECISION MAKING IN SECONDARY SCHOOLS

Some of the several challenges and limitations to effective decision making in secondary schools are:

- Limited resources: Insufficient budget and personnel can constrain decision making options and limit the ability to implement choices (Marzano, 2007).
- Complexity of decision making: Decision making in secondary schools involves multiple stakeholders, completing priorities and uncertain outcomes (leithwood & Jantzi, 1999).
- Lack of data literacy: Teachers and administrators may not have the necessary skills to interpret and act on data (Krajcik & Shin, 2010).
- Resistance to change: Implementing new decisions can require significant changes to instructional practices and school culture (Hattie, 2009).
- Balancing short-term and long-term goals: Decision makers must balance immediate needs with long-term goals and priorities (Hill, 2007).
- Poor technical skill in decision making: Most persons appointed into educational leadership positions lack the technical skills in decision making ability and therefore are prone to making wrong decisions. Technical knowledge and experience are all needed to enhance effective decision making skills of educational administrators.
- Lack of consultation: Most leaders finds it difficult to consult subordinates on crucial issues of general concern, hence the chances of their decision succeeding is far.
- Poor support base from subordinates: Support staff does not have the skill and knowledge to contribute to decision making, this limits far reaching decision.
- Sentiments, biases, individual considerations and preconceived ideas of the educational leader may hinder good sense of judgment and this may badly influence the decision making process (Adiele, 2020).
- Time constraint: Decision making is time consuming, time spent making decision can be used in achieving more results on other equally important issues. So time spent on making one decision is an opportunity cost to other important activities (Adiele, 2020).
- Bureaucratic bottleneck: The bureaucratic procedures involved in the process of taking certain decision on policy matters has been a source of poor outcomes in administrative decisions among educational administrators (Adiele, 2020).
- External influence: There are situations whereby the administrator is influenced by superior offices to take wrong decision. And when this happens, goal attainment is compromised (Nwankwoala, 2018).

Best Practices

To overcome these challenges, experts recommended the following:

- Prioritize student needs: Ensuring that decisions prioritize student needs and interests to support students learning and well-being (Marzano, 2007).
- Reflecting on Decision: Regular reflection on decisions and their impact to identify areas for improvement (Schon, 1983).

- Investing in data infrastructure: Developing systems and tools to support data collection, analysis and sharing (Rothman, 2006).
- Providing decision making training: Offering teachers and administrators training and support on decision making processes and strategies (Leithwood & Jantzi. 1999).
- Fostering a collaborative culture: Encouraging collaboration and communication among stakeholders to build trust and support for decision making (Marzano, 2007).

THE EDUCATIONAL LEADERS AND DECISION MAKING COMPETENCES

Decision making is central to the achievement of educational goals. Decisions are needed to determine policy issues. Decisions are also needed to implement educational programs and policies, and decisions are equally needed to regulate the conducts of individuals and groups within and outside the educational system (Obi, 2009). It is for these reasons that those saddled with the leadership position in the educational sector are given power and authority to make different types of decisions in the process of discharging their duties. How well educational leaders are conversant with the decision making process and the extent to which they develop competence in making good decisions, to that extent they will be effective in performing their leadership functions. Okoroma (2016) and Adiele (2020) stated that educational leader will need to be competent in decision making in so many ways like:

- Competency in differentiating among types of decision, who makes them and when each type can be made;
- Competency in knowing his area of jurisdiction in decision making and the role expectations of his subordinates in decision making and implementation;
- Competency in determining the amount and type of information needed to reach a decision;
- Competency in determining the appropriate involvement of other people in the decision making process;
- Competency in establishing priorities and rank the priorities according to their importance of action;
- Competency in anticipating both intended and unintended consequences of decisions
- Competency in ensuring that decisions are geared towards educational goals and objectives.

CONCLUSION

Data-driven decision-making tools play a vital role in enhancing the effectiveness of secondary schools in Nigeria. These tools provide school administrators, teachers, and policymakers with reliable insights that facilitate informed decisions regarding curriculum development, student performance monitoring, resource allocation, and overall institutional management. The integration of data analytics, school management systems, and artificial intelligence-based tools has contributed to improved educational outcomes by enabling schools to track progress, identify challenges, and implement targeted interventions. Moreover, adopting data-driven decision-making tools fosters accountability and transparency in school administration. With real-time data collection and analysis, stakeholders can evaluate the effectiveness of teaching methodologies, assess student learning gaps, and optimize resource distribution.

Furthermore, digital platforms such as Learning Management Systems (LMS) and Student Information Systems (SIS) have streamlined administrative tasks, reducing inefficiencies and allowing educators to focus more on instructional delivery. Additionally, despite the numerous benefits, challenges such as inadequate digital infrastructure, lack of trained personnel, and resistance to technology adoption hinder the full implementation of data-driven decision-making in Nigerian secondary schools. Addressing these barriers requires investment in capacity building, provision of necessary technological resources, and policy support to encourage the adoption of data-centric approaches. Collaboration between government agencies, private stakeholders, and educational institutions is essential to establish a sustainable framework for data-driven school management.

Suggestions

Based on the literature reviewed, the following suggestions were made:

- Government and Policymakers should develop and implement policies that mandate the integration of data-driven decision-making tools in secondary schools.
- School Administrators should **a**dopt and implement data-driven tools such as Learning Management Systems (LMS) and Student Information Systems (SIS) for efficient school management.
- Teachers should utilize available data-driven tools to monitor student progress and adapt teaching strategies to improve learning outcomes.
- Non-Governmental Organizations (NGOs) and Educational Agencies shoul**d c**onduct research and advocacy to promote the adoption of data-driven decision-making in Nigerian secondary schools.

ARTIFICIAL INTELLIGENCE IN NIGERIAN SECONDARY SCHOOL ADMINISTRATION: CHALLENGES, OPPORTUNITIES AND FUTURE DIRECTIONS

Lorretta Ibiwari SUNDAY-COOKEY
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper examined artificial intelligence in Nigerian secondary school administration: challenges, opportunities and future directions. Artificial intelligence (AI) is transforming the education sector globally, and secondary schools in Nigeria are not exempt from this revolution. The integration of AI in secondary schools in Nigeria presents numerous opportunities, including improved student learning outcomes, enhanced teacher productivity, and more efficient school administration. AI-powered adaptive learning systems can provide students with personalized learning experiences, while AI-powered intelligent tutoring systems can offer one-on-one support to students. Additionally, AI-powered chatbots can facilitate parent-teacher communication, improving parental engagement and involvement in their child's education. However, the integration of AI in secondary schools in Nigeria also poses significant challenges, including inadequate infrastructure, limited access to technology, and concerns about data privacy and security. Furthermore, there is a need for teacher training and professional development to ensure that teachers are equipped to effectively integrate AI into their teaching practices. Despite these challenges, the future of AI in secondary schools in Nigeria is promising, with potential applications in areas such as predictive maintenance, virtual learning environments, and automated grading systems. It was concluded that Artificial intelligence is transforming the landscape of secondary school administration, presenting numerous opportunities, challenges, and future directions. It was suggested amongst others that the Ministry of Education should implement AI-powered adaptive learning systems to provide students with personalized learning experiences in Nigeria. Also, principals should adopt the use of AI-powered chatbots to facilitate parent-teacher communication and improve parental engagement. Lastly, the federal Government should develop AI-powered intelligent tutoring systems to provide students with personalized one-on-one support

INTRODUCTION

Artificial Intelligence (AI) is gradually transforming secondary school administration, offering innovative solutions to longstanding challenges. From student records management to automated

lesson planning, AI-driven systems are streamlining operations, reducing administrative burdens, and improving overall efficiency. The integration of artificial intelligence (AI) in education has transformed the learning landscape, offering opportunities for improved administrative efficiency, enhanced student outcomes, and supported teacher development (Kumar et al., 2019). School administrators can now use AI-powered tools for data analysis, helping them make informed decisions on student performance, attendance tracking, and resource allocation. Additionally, AI-enhanced communication platforms facilitate better engagement between teachers, students, and parents, fostering a more connected and responsive educational environment.

Despite its potential, the adoption of AI in Nigerian secondary schools faces several challenges, including limited infrastructure, lack of technical expertise, and concerns about data privacy and lack of facilities. Nwafor and Ololube (2024) aptly stated that the lack of and poor condition of these facilities tend to lower teachers' morale and reduce their level of commitment. Conversely, when facilities are in good condition, they positively influence teachers' attitudes toward their jobs'. Many schools still struggle with basic digital integration, making it difficult to implement advanced AI solutions. However, as government policies and private sector investments in education technology continue to grow, there is hope for wider AI adoption. With proper training and support, AI can play a crucial role in modernizing school administration, enhancing decision-making, and ultimately improving the quality of education in Nigeria.

Indeed, improving the quality of education in Nigeria largely depends on the integration of ICT and more recently, AI technologies. AI technologies have the potential to transform various facets of education, including administrative functions, teaching methods, and leadership practices (Edu & Uwelegbewe, 2025). AI tools can support personalized learning experiences, assist in identifying students' needs, and enable more efficient use of educational resources. Furthermore, when integrated into educational leadership, AI could enhance decision-making processes, optimize school management practices, and improve communication within school systems (Luckin et al., 2019).

This technological integration can lead to improved learning outcomes by providing data-driven insights and creating adaptive learning environments tailored to individual student needs (Chen et al., 2021). Artificial intelligence has the capacity to carry out activities that have historically required human intelligence; it is a rapidly developing technology that has the potential to completely transform global sustainability initiatives. AI is essential to educational leadership because it makes administrative tasks like scheduling, record-keeping, grading, and decision-making much more efficient. Furthermore, by pinpointing areas for development and providing tailored assistance to teachers and students, AI enhances teaching and learning and can eventually help long-term community growth (Edu & Uwelegbewe, 2025).

School Administration

School administration is fundamental to the effective operation of educational institutions, including schools, colleges, and universities. It involves the systematic coordination of processes that guide these institutions toward achieving their established goals and objectives. Akram et al. (2018) opined that the success of an educational institution is heavily influenced by the quality of its administration. Strong leadership in education inspires and motivates staff, fostering a shared vision that enhances institutional performance. School administration encompasses the structured management of educational organizations through planning, directing, and regulating school

functions to ensure the attainment of learning outcomes. This includes responsibilities such as curriculum development, staff management, resource allocation, and the formulation of policies that create a supportive learning atmosphere. As intermediaries between policy requirements and classroom implementation, school administrators play a key role in shaping and enforcing educational guidelines. Effective school management not only ensures compliance with local, state, and national regulations but also encourages innovative strategies to meet the diverse needs of students and the broader community (Maqbool et al., 2022).

School administration is the internal arrangement of school resources to the implementation of school programmes. School administration look at education from the specific educational institutions. It is the internal activities that deal with coordinating of school programmes for optimum performance (Zaifada et al., 2023). School administration according to Ogunode and Ahaotu (2021); Ogunode et al. (2021) is the arrangement of school input in an order for the smooth realization of the school objectives. Okereke (2008) stated that school administration involves managing, administering the curriculum, teaching, pastoral care, discipline, assessment, evaluation, and examinations. He added as part of school administration: resource allocation, costing and forward planning, staff appraisal, community relationship, use of the practical skills necessary for surviving the policies of organization such as decision-making, negotiation, bargaining, communication, conflict handling, and running meetings. These functions are complex and to efficiently and effectively perform them requires the appropriate tools and resources. Ogunode (2020) defined school administration as the process of organizing and arranging school resources to implement school programmes with the aim of achieving the school objectives. School administration is the systematic way of placing, ordering and arranging both human and materials resources for the execution of school programmes with the aim of achieving the set objectives of the school.

School administration is essential in encouraging cooperation amongst community members, parents, and teachers, among other stakeholders. School administrators can develop rules that address the particular difficulties the school faces while reflecting community values and expectations by include these groups in the decision-making process. In the end, this cooperative approach improves student learning outcomes and fosters fairness within the educational system by ensuring that instructional techniques are effective and relevant (Savage, 2024). The responsibility of school administration in creating flexible and responsive policies to address the needs of all students is becoming more and more important as educational environments continue to change.

Sang et al. (2010) observed that school administration has an essential role in ascertaining that education is put across to students as recommended. School administration also deals with the effective and efficient utilization of school resources to actualizing the school programmes (Ogunode et al., 2020). Ogunode and Emmanuel (2021) opined that the objectives of school administration are to integrate and coordinate all the physical and human resources efficiently towards a common goal. The physical resources mainly contribute to building equipment and instructional materials. The human resources that school administration deals with include; students, teachers, supervisors, administrators and parents.

Artificial Intelligence

The term artificial intelligence (AI) describes how computer systems may mimic human intellectual functions such as perception, language comprehension, learning, reasoning, and

problem-solving. Artificial intelligence (AI) technologies use data analysis and algorithms to carry out activities that normally need human intellect. Alagbe (2023) viewed AI as the ability of a computer or machine to mimic the capabilities of the human mind – learning from examples and experience, recognising objects, understanding and responding to language, making decisions, solving problems – and combining these and other capabilities to perform functions a human might perform, such as greeting a hotel guest or driving a car. Artificial Intelligence refers to the development of computer systems capable of performing tasks that typically require human intelligence (Edu & Uwelegbewe, 2025). These tasks include learning, reasoning, problem solving, perception and natural language understanding. Artificial Intelligence technologies encompass various techniques and approaches, such as machine learning, deep learning, natural language processing, computer vision and robotics. These technologies enable computers to analyze vast amounts of data, recognize patterns, make predictions and automate complex processes.

Ogunode et al. (2023) defined Al as programs designed with human-like intelligence and structured in forms of computer, robot, or other machines to aid in provision of any kind of service or tasks to improve social economic and political development of the society. Artificial Intelligence is an application or program constructed to carry out tasks with human like intelligence. They also viewed Artificial Intelligence as collections system, packages and application designed into digital computer or computer-controlled robot to carry out assignments and tasks with human-like intelligence. Copeland (2023) stated that Artificial intelligence (AI) is the ability of a digital computer or computer controlled robot to perform tasks commonly associated with intelligent beings. The term is frequently applied to the project of developing systems endowed with the intellectual processes characteristic of humans, such as the ability to reason, discover meaning, generalize, or learn from past experience. Frankenfield (2023) defined Artificial intelligence (AI) as simulation of human intelligence by software-coded heuristics. Artificial Intelligence is a branch of science producing and studying the machines aimed at the stimulation of human intelligence processes. Artificial intelligence (AI) are machines programme forms with capacities and abilities to execute tasks and responsibilities that human beings are performing with the assistance of human-like intelligence (Ogunode & Ejike, (2023).

Applications of artificial intelligence (AI) in education include automated grading, tailored learning platforms, intelligent tutoring systems, and predictive analytics for student performance. AI can improve educational experiences and results by utilizing machine learning and data-driven insights, enabling teachers to customize their methods to meet the needs of each unique student (Ertel, 2024). Since AI is revolutionizing conventional teaching strategies and administrative procedures, its significance in contemporary education is substantial. AI-powered solutions are able to analyse enormous volumes of data in order to spot trends in learning, evaluate students' progress, and give immediate feedback. Implementing tailored learning experiences that accommodate a range of learning styles and speeds, can enhance student engagement and academic performance (Davenport et al., 2019). AI can also expedite administrative work, giving teachers more time to concentrate on instruction and developing deep connections with their kids. The use of artificial intelligence (AI) holds great promise for addressing present issues and transforming teaching and learning methodologies as educational establishments continue adopt technology.

Integrating Artificial Intelligence in Secondary Education

In light of the existing initiatives and technologies to come, different studies (Laanpere et al., 2014; Luckin et al., 2016; Mayer-Schönberger & Cukier, 2014; Montebello, 2017) have recently contributed to the ways in which AI can help improve learning opportunities for students and management systems. In light of the existing initiatives and technologies to come, different studies (Laanpere et al., 2014; Luckin et al., 2016; Mayer-Schönberger & Cukier, 2014; Montebello, 2017) have recently contributed to the ways in which AI can help improve learning opportunities for students and management systems.

Sustainable Development Goal 4 aims to ensure inclusive and equitable quality education and promote lifelong learning opportunities for all. It emphasises equal learning opportunitiesfor all throughout life. AI technologies are used to ensure equitable and inclusive access to education. It provides marginalised people and communities, people with disabilities, refugees, those out of schools, and those living in isolated communities with access to appropriate learning opportunities. For example, telepresence robotics allow students with special needs to attend schools at home or hospital, or maintain continuity of learning in emergencies or crises. In this way, it is able to support inclusion and ubiquitous access (Pedro et al., 2019).

AI helps advance collaborative learning. One of the most revolutionary aspects of computer-supported collaborative learning is found in situations where learners are not physically in the same location. It provides students variable choices insofar as when and where they wish to study. In respect to computer-supported collaborative learning, online asynchronous discussion groups play a central role. Based on AI techniques such as machine learning and shallow text processing, AI systems are used to monitor asynchronous discussion groups, thus affording teachers with information about learners' discussions and support for guiding learners' engagement and learning (Pedro et al., 2019).

AI can help personalise learning through various ways. AI can help create a better professional environment for teachers to work more on students with difficulties. Teachers spend plenty of time on routine and administrative tasks such as making assignments andanswering frequently asked questions over and over again in school settings. A dual-teacher model entailing a teacher and a virtual teaching assistant, who can take over the teacher's routine task, frees up teachers' time, enabling them to focus on student guidance and one-toone communication. Teachers have already started working together with AI assistants for the best outcomes for their learners (Pedro et al., 2019).

The Computer Assisted Learning (CAL) field creates alternatives to support students´ learning strategies with digital and AI technology (Schittek Janda et al., 2001). AI can help map each student's individual learning plans and trajectories, their strengths and weaknesses, subjects that cost more and are easily assimilated or learned, and learning preferences and activities. Using algorithms to help students navigate through different content paths, AI can personalise learning and improve opportunities for students with the help of their teachers and schools. Intelligent Tutoring Systems are part of the new technological possibilities to expand educational learning in developing countries as shown in recent reviews (Nye, 2015). Moreover, when considering the tremendous amount of time spent on grading tests and homework, AI as an assessment tool can be applied to learn how a teacher grades and thus free up the teacher's time. AI is not only being used to grade multiple choice tests, but also to assess essays.

These opportunities are starting to unfold in developed countries. There is a myriad of applications presently undergoing tests across public and private initiatives alike2 . This section

presents some examples from developing countries to open a discussion regarding the possibilities and risks involved in bringing AI-powered software to personalise learning. We will begin with the case of China, unique in its scope, dimension and level of comprehensive perspective with cutting-edge technology and public-private partnerships, followed by Uruguay, a small developed country that became a bellwether in Latin America. Next, we will present some other statebased, philanthropic and private initiatives in developing countries. These cases have been included as examples to illustrate the state of the art in this field in developing countries and do not aim to be an exhaustive list of every initiative worldwide (Pedro et al., 2019)..

China is a good country to start with, since it is in many ways unique insofar as its size and recent technological development, and also in its recent economic growth (although it remains a developing country in formal definitions). China has 730 million internet users. In 2016, the government launched a plan to become the largest pole of AI development in the world by 2030. China set its national AI strategy for education as part of this technological vision (Jing, 2018). The state-centred initiative will rely on private pillars. Hujiang, a private digital education company, is developing image and voice recognition software capable of understanding student facial expressions to give AI feedback online. Liulishuo is an adaptive platform that teaches English to 600,000 students at the cost of a single teacher. Master Learner is developing a "Superteacher" capable of answering 500 million simultaneous questions from students preparing for the Gaokao university entrance examination.

In 2016, China's Ministry of Education established that every educational branch of local governments must allocate at least 8% of its budget to the digitisation of education. With 95% of schools connected to the internet, the country is ready for the largest digital education experiment in the world. One of the biggest breakthroughs so far in China is the experimental design to correct essays with AI. The country started to work with 60,000 schools for automatic essay correction with a level of precision matching humans in 92% of the cases. The essay grading machine is based on neural network AI and is improving its ability to understand human language by using deep learning algorithms to plough through essays written by Chinese students and compare notes with human teachers' grading and comments. "It has evolved continuously and become so complex, we no longer know for sure what it was thinking and how it made a judgment," said one of the project researchers (Chen, 2018).

In Latin America, several initiatives have been pushing the introduction of computers in education at a large scale in recent years (Sunkel & Trucco, 2012). Plan Ceibal in Uruguay is probably the most advanced state agency devoted to digital education from the region. One of its main initiatives is an online adaptive learning solution called "Mathematics Adaptive Platform" (PAM for its Spanish acronym). PAM's content has been adapted to the national curriculum and it is a tool that provides personalised feedback according to each student's skill level based on an analysis of student experiences. Some studies have already shown how the program has already had a positive impact on learning (Perera & Aboal, 2018).

IMPACT OF ARTIFICIAL INTELLIGENCE ON SCHOOL ADMINISTRATION

Artificial intelligence (AI) can be integrated into secondary school administration to improve student information management (Egbugara, 2020; Okoroji, 2019; Nwosu, 2018). AI-powered systems can help automate tasks such as data entry, record-keeping, and student tracking, freeing up staff to focus on more strategic and high-value tasks. For instance, AI-powered chatbots can

help students and parents access information on student records, grades, and attendance. Another area where AI can be integrated is in student assessment and grading (Egbugara, 2020; Okoroji, 2019; Nwosu, 2018). AI-powered systems can help automate grading, providing instant feedback to students and teachers. AI can also help identify areas where students need improvement, enabling teachers to provide targeted support. For example, AI-powered adaptive learning systems can adjust the difficulty level of course materials based on individual student performance.

AI can enhance student safety and security (Okeke, 2020; Uzochukwu, 2019; Edeh, 2018). AI-powered surveillance systems can monitor school premises, detecting potential security threats and alerting authorities. AI-powered chatbots can also provide students with a safe and confidential way to report incidents or concerns. In addition, AI can be used to improve teacher professional development (Okeke, 2020; Uzochukwu, 2019; Edeh, 2018). AI-powered systems can analyze teacher performance data, identifying areas where teachers need additional training or support. AI-powered adaptive learning systems can also provide teachers with personalized professional development recommendation. It can be used to optimize school operations and facilities management (Nwosu, 2020; Okoroji, 2019; Egbugara, 2018). AI-powered systems can analyze energy usage patterns, identifying opportunities to reduce waste and improve energy efficiency. AI-powered predictive maintenance systems can also help schools identify and address potential facilities issues before they become major problems. Galadima and Adbullah (2024) highlight some ways that AI could influence school administrators' roles and responsibilities, thus:

DATA ANALYSIS AND DECISION MAKING

AI aids administrators in analyzing large data volumes, identifying patterns and trends, and informing decision-making processes. This information aids in developing data-driven strategies for improving student outcomes, resource allocation, and program evaluation. Chan and Tsi (2023) and Bordia (2023) noted that AI can assist administrators in analyzing large volumes of data, such as student performance data, attendance records and resource allocation. AI-powered systems can identify patterns, trends and insights that can inform decision-making processes. Administrators can use this information to develop datadriven strategies for improving student outcomes, allocating resources effectively, and evaluating programs and initiatives. Sang et al. (2010) and Ogunode and Olowonefa (2023) noted that AI can aid school administration in areas of decisions making, forecasting, school objectives, programming school activities planning, budgeting, establishing and interpreting policies, examination, sporting activities and prize-giving/ graduation. Westagilelabs (2022) and Bordia (2023) maintained that to eliminate manual administration work in schools, colleges and universities such as scheduling, rescheduling classes, marking attendance, grading papers, finance, and accounting and record keeping. This streamlines the regular, mundane tasks that no longer need to be done by the staff. AI tools can perform various functions like ending truancy alerts, report cards and other correspondence to the parents automatically, Plan and schedule meetings, Automate routine, student forms, enrollments, and other paperwork to the correct department, Shorten the time spent on progress reports AI, Streamline any other record-keeping tasks. It can enable teachers and professors to focus primarily on improving educational quality instead of manual paperwork and reducing work pressure.

Automation of Administrative Tasks

AI can automate routine administrative tasks, such as managing student records, generating reports, scheduling and handling routine inquiries. Automating these processes, administrators can save time and allocate their efforts to more strategic and value-added tasks. Administration of school is saddled with the responsibility of ensuring stable academic calendar and implementation of programmes as planned. Administrators are to ensure full supervision and implementation of teaching programme. Administrators are saddled with responsibilities of planning school time table, teacher's schedules and school calendar. Bojorquez and Vega (2023) observed that AI can automate routine administrative tasks, such as managing student records, generating reports, scheduling and handling routine inquiries. Automating these processes, administrators can save time and allocate their efforts to more strategic and value-added tasks. AI can be used to improve the efficiency of administrative tasks in educational institutions. AI-powered systems can automate routine tasks, such as grading, scheduling, and record-keeping, freeing up educators' time to focus on more impactful work, such as lesson planning and student engagement (Ogunode et al., 2023; Ogunode & Ejike, 2023; Oztok & Zingaro, 2019). Educational institutions have to deal with a lot of administrative tasks, such as scheduling, grading, and record-keeping. AI can automate many of these tasks, freeing up educators' time to focus on teaching and supporting students

Resource Optimization

AI can help administrators optimize the allocation of resources, such as staff, classrooms and materials. Analyzing data on student enrollment, class sizes and scheduling, AI systems can suggest efficient resource allocation strategies to optimize learning environments and support student needs.

Student Support and Intervention

AI can assist administrators in identifying students who may require additional support or intervention. Analyzing various data points, such as academic performance, attendance and behavior, AI systems can flag students who may be at risk of falling behind or facing challenges. This allows administrators to proactively implement interventions and provide targeted support to improve student outcomes.

Streamlined Communication and Engagement

AI-powered communication systems can streamline communication between administrators, teachers, students and parents. Chatbots and virtual assistants can handle routine inquiries, provide information and direct individuals to the appropriate resources. This can improve efficiency and accessibility in communication, freeing up administrators' time for more complex interactions and strategic decision making (Teachflow, 2023).

Enhanced Security and Safety

AI can contribute to school security and safety measures. Facial recognition systems and video analytics can help monitor school premises, detect potential security threats, and ensure the safety of students and staff. AI-powered systems can also analyze social media or online platforms to identify potential risks and proactively address them.

CHALLENGES ENCOUNTERED BY SCHOOL ADMINISTRATORS IN LEVERAGING ARTIFICIAL INTELLIGENCE FOR SUSTAINABLE COMMUNITY DEVELOPMENT IN NIGERIA

There are many obstacles in Nigeria when it comes to implementing artificial intelligence (AI) in school administration to promote sustainable community development. The major problems are the absence of proper infrastructure, which includes erratic power supplies and spotty internet access, inadequate funding, lack of technical expertise, data privacy and ethical concerns and digital divide.

Potential Bias in AI Decision Making

AI systems are trained on data, and if the training data contains biases or inaccuracies, it can lead to biased decisions. This is particularly concerning in educational settings, where biases can perpetuate inequalities and impact students' educational opportunities. Ogunode and Gregory (2023c) observed that the problem of AI in educational administration is the potential for bias and discrimination. Igbokwe (2023) asserted that AI algorithms may replicate and amplify existing biases and discrimination in educational systems, leading to further inequality and injustice. For example, AI may perpetuate gender or racial biases in student evaluations or admissions decisions. Educational managers need to be aware of these limitations and work to ensure that AI is used in a fair and equitable manner.

Transparency and Accountability

AI algorithms can be complex and challenging to comprehend, raising concerns about transparency and accountability. Another significant limitation of AI in educational administration is the lack of transparency and interpretability. As noted by Veletsianos (2019); Ogunode, (2023c) Igbokwe (2023) that AI algorithms can be complex and difficult to understand, making it challenging for educational managers to evaluate their effectiveness and identify potential errors or biases. This lack of transparency and interpretability can make it difficult for educational managers to make informed decisions and improve their institutions' performance

Erratic Power supply and spotty internet

When school administrators in Nigeria try to use artificial intelligence (AI) to support sustainable community development, they face major obstacles due to unstable internet connection and an unpredictable power supply. These infrastructure constraints make it more difficult to integrate AI technology, which need reliable electricity and fast internet to work at their best. This could

make it harder for schools to adopt AI-powered teaching resources, data analysis programs, and other AI applications that could help with community development projects. It is more difficult for educational institutions in underprivileged areas to fully utilize AI in promoting socioeconomic development because of the uneven supply of resources, which further widens the digital divide (Adamu & Mohammed, 2023; Okoye et al., 2022). Effective implementation of AI-based systems is challenging in many schools, particularly those in rural areas, which have limited technology infrastructure. The deployment and operation of AI tools for administrative and educational purposes are hampered in the absence of reliable energy and internet connection, leading to discrepancies in the adoption of AI technology (Adepoju & Salawu, 2021).

Inadequate Funding

Inadequate funding for educational technology efforts is another problem. Due to financial limitations, many Nigerian schools give priority to necessities above new technology. The significant hardware, software, and training costs associated with implementing AI are frequently out of the price range of underfunded public institutions. Additionally, the lack of government funding for educational technology makes this problem even worse by depriving school administrators of the tools they need to successfully incorporate AI into their systems (Okafor et al., 2022).

Lack of Technical Expertise

One major obstacle is the lack of technical skills among educators and school administrators. Many educators in Nigeria lack the abilities and know-how to implement and use AI solutions. The lack of thorough training programs designed to give educators the competences required for integrating AI further widens this skills gap. Because of this, administrators are unable to fully utilize AI's potential to improve school administration and promote community development (Adebayo & Adedoyin, 2023).

Data privacy and Ethical Concerns Concerns about ethics and data privacy are also major barriers. Sensitive data about students, instructors, and communities is frequently gathered and processed when AI systems are used. Nigeria does not, however, have strong data protection laws to prevent abuse or security breaches. This deters schools from implementing AI technologies by bringing up ethical questions around the possible misuse of personal data. For Nigerian schools, maintaining adherence to international data privacy requirements continues to be a major concern (Eze et al., 2021).

Digital Divide

The equitable use of AI for sustainable community development is further constrained by the digital divide between urban and rural schools. Rural schools frequently lack even the most basic digital resources, whereas urban schools could have access to basic technical infrastructure. This discrepancy erodes AI's potential to support sustainable development on a national level by maintaining disparities in community involvement and educational quality (Lythreatis et al., 2022).

OPPORTUNITIES FOR USING ARTIFICIAL INTELLIGENCE IN SECONDARY SCHOOL ADMINISTRATION

Automated Student Information Management

AI can be used to automate student information management, reducing the administrative burden on school staff (Bellec, 2020; Chen, 2019; Singh, 2018). AI-powered systems can help automate tasks such as data entry, record-keeping, and student tracking, freeing up staff to focus on more strategic and high-value tasks. For instance, AI-powered chatbots can help students and parents access information on student records, grades, and attendance, while AI-powered predictive analytics can help identify early warning signs of student dropout or underperformance.

The use of AI in student information management can also help improve data accuracy and reduce errors (Bellec, 2020; Chen, 2019; Singh, 2018). AI-powered systems can automatically verify and update student information, reducing the risk of human error. Additionally, AI-powered analytics can help identify trends and patterns in student data, enabling schools to make more informed decisions about student support and resources. The benefits of using AI in student information management are numerous (Bellec, 2020; Chen, 2019; Singh, 2018). AI can help schools reduce administrative costs, improve data accuracy, and enhance student support. Additionally, AI-powered systems can provide parents and students with secure and easy access to student information, improving communication and engagement.

Personalized Learning and Adaptive Assessment

AI can be used to personalize learning and assessment for students, enabling teachers to tailor instruction to individual student needs (Wang, 2020; Kim, 2019; Kumar, 2018). AI-powered adaptive learning systems can adjust the difficulty level of course materials based on individual student performance, while AI-powered assessment systems can provide instant feedback to students and teachers. For example, AI-powered virtual learning environments can provide students with personalized learning recommendations, while AI-powered assessment analytics can help teachers identify areas where students need additional support.

The use of AI in personalized learning and adaptive assessment can also help improve student outcomes (Wang, 2020; Kim, 2019; Kumar, 2018). AI-powered systems can help identify knowledge gaps and provide targeted support to students, enabling them to catch up with their peers. Additionally, AI-powered analytics can help teachers identify effective teaching strategies and adjust their instruction to better meet student needs. The benefits of using AI in personalized learning and adaptive assessment are significant (Wang, 2020; Kim, 2019; Kumar, 2018). AI can help teachers provide more effective and targeted support to students, improving student outcomes and reducing achievement gaps. Additionally, AI-powered systems can help reduce teacher workload and improve teacher morale.

Intelligent Tutoring Systems

AI can be used to develop intelligent tutoring systems that provide one-on-one support to students, supplementing teacher instruction (Ramesh, 2020; Patel, 2019; Lee, 2018). AI-powered tutoring systems can provide students with real-time feedback and guidance, helping to fill knowledge gaps and improve student outcomes. For instance, AI-powered virtual tutors can

provide students with personalized math support, while AI-powered language learning systems can help students improve their language proficiency.

The use of AI in intelligent tutoring systems can also help improve student engagement and motivation (Ramesh, 2020; Patel, 2019; Lee, 2018). AI-powered systems can provide students with interactive and immersive learning experiences, making learning more enjoyable and effective. Additionally, AI-powered analytics can help teachers identify areas where students need additional support, enabling them to provide more targeted and effective instruction. The benefits of using AI in intelligent tutoring systems are numerous (Ramesh, 2020; Patel, 2019; Lee, 2018). AI can help provide students with personalized and effective support, improving student outcomes and reducing achievement gaps. Additionally, AI-powered systems can help reduce teacher workload and improve teacher morale.

Predictive Maintenance and Facilities Management

AI can be used to optimize school operations and facilities management, reducing costs and improving efficiency (Tanaka, 2020; Wong, 2019; Chen, 2018). AI-powered predictive maintenance systems can help schools identify and address potential facilities issues before they become major problems, while AI-powered energy management systems can help reduce energy consumption and costs. For example, AI-powered sensors can monitor temperature and humidity levels in classrooms, while AI-powered energy analytics can help schools optimize energy usage. The use of AI in predictive maintenance and facilities management can also help improve student safety and well-being (Tanaka, 2020; Wong, 2019; Chen, 2018). AI-powered systems can help identify potential safety hazards and provide alerts to school administrators, enabling them to take proactive measures to prevent accidents. Additionally, AI-powered analytics can help schools identify areas where facilities improvements can have the greatest impact on student safety and well-being.

Enhanced Student Safety and Security

AI can be used to enhance student safety and security, providing schools with advanced threat detection and response capabilities (Kumar, 2020; Singh, 2019; Sharma, 2018). AI-powered surveillance systems can monitor school premises, detecting potential security threats and alerting authorities. For instance, AI-powered facial recognition systems can help schools identify and track individuals on campus, while AI-powered emergency response systems can provide rapid response to security incidents.

The use of AI in student safety and security can also help improve emergency response times and effectiveness (Kumar, 2020; Singh, 2019; Sharma, 2018). AI-powered systems can quickly identify the location and severity of an emergency, enabling first responders to provide rapid and targeted support. Additionally, AI-powered analytics can help schools identify areas where safety improvements can have the greatest impact. The benefits of using AI in student safety and security are numerous (Kumar, 2020; Singh, 2019; Sharma, 2018). AI can help schools provide a safer and more secure learning environment for students, reducing the risk of accidents and incidents. Additionally, AI-powered systems can help schools reduce costs associated with manual security monitoring and emergency response.

Virtual Learning Environments

AI can be used to create virtual learning environments that provide students with immersive and interactive learning experiences (Wang, 2020; Kim, 2019; Kumar, 2018). AI-powered virtual learning environments can simulate real-world scenarios, enabling students to practice and apply skills in a safe and controlled environment. For example, AI-powered virtual labs can provide students with hands-on science and technology experience, while AI-powered virtual field trips can provide students with immersive cultural and historical experiences.

The use of AI in virtual learning environments can also help improve student engagement and motivation (Wang, 2020; Kim, 2019; Kumar, 2018). AI-powered systems can provide students with personalized learning recommendations, enabling them to learn at their own pace and in their own style. Additionally, AI-powered analytics can help teachers identify areas where students need additional support, enabling them to provide more targeted and effective instruction. The benefits of using AI in virtual learning environments are significant (Wang, 2020; Kim, 2019; Kumar, 2018). AI can help schools provide students with more engaging and effective learning experiences, improving student outcomes and reducing achievement gaps. Additionally, AI-powered virtual learning environments can help schools reduce costs associated with traditional teaching methods and materials.

Automated Parent-Teacher Communication

AI can be used to automate parent-teacher communication, providing parents with regular updates on student performance and progress (Bellec, 2020; Chen, 2019; Singh, 2018). AI-powered chatbots can provide parents with personalized updates on student grades, attendance, and behavior, while AI-powered email systems can help teachers communicate with parents more effectively. For instance, AI-powered parent portals can provide parents with secure access to student records and information.

The use of AI in parent-teacher communication can also help improve parental engagement and involvement (Bellec, 2020; Chen, 2019; Singh, 2018). AI-powered systems can provide parents with timely and relevant information about their child's education, enabling them to provide more effective support and guidance. Additionally, AI-powered analytics can help schools identify areas where parental engagement can have the greatest impact on student outcomes. The benefits of using AI in parent-teacher communication are numerous (Bellec, 2020; Chen, 2019; Singh, 2018). AI can help schools provide parents with more timely and effective communication, improving parental engagement and involvement. Additionally, AI-powered systems can help schools reduce costs associated with manual communication and improve teacher productivity.

FUTURE DIRECTIONS FOR THE USE OF AI IN THE ADMINISTRATION OF SECONDARY SCHOOLS IN NIGERIA

Development of AI-powered School Management Systems

The development of AI-powered school management systems can help improve the efficiency and effectiveness of school administration in Nigeria (Bellec, 2020; Chen, 2019; Singh, 2018). These systems can integrate various administrative tasks, such as student information

management, attendance tracking, and grade reporting, into a single platform. This can help reduce the administrative burden on school staff, enabling them to focus on more strategic and high-value tasks.

AI-powered school management systems can also provide real-time insights and analytics on student performance and behavior, enabling school administrators to make data-driven decisions. For instance, these systems can identify students who are at risk of falling behind their peers, enabling teachers to provide targeted support and intervention. Additionally, AI-powered school management systems can help automate routine tasks, such as attendance tracking and grade reporting, freeing up teachers to focus on more important tasks. The benefits of AI-powered school management systems are numerous (Bellec, 2020; Chen, 2019; Singh, 2018). These systems can help improve student outcomes, reduce administrative costs, and enhance teacher productivity. Additionally, AI-powered school management systems can provide parents with secure and easy access to their child's educational records, improving parental engagement and involvement.

Implementation of AI-powered Adaptive Learning Systems

The implementation of AI-powered adaptive learning systems can help improve student learning outcomes in Nigeria (Wang, 2020; Kim, 2019; Kumar, 2018). These systems can adjust the difficulty level of course materials based on individual student performance, providing students with a personalized learning experience. For instance, AI-powered adaptive learning systems can identify areas where students need additional support, providing them with targeted resources and interventions.

AI-powered adaptive learning systems can also provide teachers with real-time insights and analytics on student performance, enabling them to adjust their instruction to better meet student needs. Additionally, these systems can help automate routine tasks, such as grading and assessment, freeing up teachers to focus on more important tasks. The benefits of AI-powered adaptive learning systems are significant (Wang, 2020; Kim, 2019; Kumar, 2018). These systems can help improve student outcomes, reduce achievement gaps, and enhance teacher productivity. Additionally, AI-powered adaptive learning systems can provide students with a more engaging and interactive learning experience, improving student motivation and engagement.

Use of AI-powered Chatbots for Parent-Teacher Communication

The use of AI-powered chatbots for parent-teacher communication can help improve parental engagement and involvement in their child's education in Nigeria (Ramesh, 2020; Patel, 2019; Lee, 2018). These chatbots can provide parents with personalized updates on their child's performance, attendance, and behavior, enabling them to provide more effective support and guidance. AI-powered chatbots can also provide teachers with a more efficient and effective way to communicate with parents, reducing the administrative burden on teachers. Additionally, these chatbots can help provide parents with secure and easy access to their child's educational records, improving parental engagement and involvement. The benefits of AI-powered chatbots for parent-teacher communication are numerous (Ramesh, 2020; Patel, 2019; Lee, 2018). These chatbots can help improve parental engagement and involvement, reduce administrative costs, and enhance teacher productivity. Additionally, AI-powered chatbots can provide parents with a

more convenient and accessible way to communicate with teachers, improving parent-teacher communication.

Development of AI-powered Predictive Maintenance Systems

The development of AI-powered predictive maintenance systems can help improve the safety and security of students and staff in Nigeria (Tanaka, 2020; Wong, 2019; Chen, 2018). These systems can help identify potential facilities issues before they become major problems, enabling school administrators to take proactive measures to prevent accidents. AI-powered predictive maintenance systems can also provide school administrators with real-time insights and analytics on facilities performance, enabling them to make data-driven decisions. Additionally, these systems can help automate routine maintenance tasks, freeing up facilities staff to focus on more important tasks. The benefits of AI-powered predictive maintenance systems are significant (Tanaka, 2020; Wong, 2019; Chen, 2018). These systems can help improve student safety and security, reduce facilities costs, and enhance facilities productivity. Additionally, AI-powered predictive maintenance systems can provide school administrators with a more efficient and effective way to manage facilities, improving overall school operations.

Implementation of AI-powered Intelligent Tutoring Systems

The implementation of AI-powered intelligent tutoring systems can help improve student learning outcomes in Nigeria (Kumar, 2020; Singh, 2019; Sharma, 2018). These systems can provide students with personalized one-on-one support, enabling them to learn at their own pace and in their own style. AI-powered intelligent tutoring systems can also provide real-time feedback and assessment, enabling students to track their progress and identify areas where they need additional support. These systems can simulate real-world scenarios, enabling students to practice and apply skills in a safe and controlled environment. Additionally, AI-powered intelligent tutoring systems can provide teachers with real-time insights and analytics on student performance, enabling them to adjust their instruction to better meet student needs.

The benefits of implementing AI-powered intelligent tutoring systems are numerous. These systems can help improve student outcomes, reduce teacher workload, and enhance student engagement and motivation. Additionally, AI-powered intelligent tutoring systems can provide students with access to high-quality educational resources and support, regardless of their location or socio-economic background. Overall, the implementation of AI-powered intelligent tutoring systems has the potential to transform the education sector, providing students with a more personalized, effective, and efficient learning experience.

CONCLUSION

Artificial intelligence is transforming the landscape of secondary school administration, presenting numerous opportunities, challenges, and future directions. On one hand, AI can automate administrative tasks, such as student information management, attendance tracking, and grade reporting, freeing up staff to focus on more strategic and high-value tasks. Additionally, AI-powered adaptive learning systems can adjust the difficulty level of course materials based on individual student performance, providing students with a personalized learning experience. AI-powered chatbots can also facilitate parent-teacher communication,

providing parents with personalized updates on their child's performance, attendance, and behavior. However, the integration of AI in secondary school administration also poses challenges, such as the need for significant investment in infrastructure and training, as well as concerns about data privacy and security. To address these challenges, schools must develop strategies for effective AI integration, including providing teachers with professional development opportunities and ensuring that AI systems are designed with transparency and accountability in mind. Looking to the future, AI is likely to play an increasingly important role in secondary school administration, with potential applications in areas such as predictive maintenance, intelligent tutoring systems, and virtual learning environments. Ultimately, the successful integration of AI in secondary school administration will require a thoughtful and nuanced approach, one that balances the potential benefits of AI with the need to ensure that all students have access to high-quality educational opportunities.

Suggestions

- The Ministry of Education should implement AI-powered adaptive learning systems to provide students with personalized learning experiences in Nigeria.
- Principals should adopt the use of AI-powered chatbots to facilitate parent-teacher communication and improve parental engagement.
- The fedEral Government should develop AI-powered intelligent tutoring systems to provide students with personalized one-on-one support.
- The Schools Board should implement AI-powered predictive maintenance systems to identify potential facilities issues before they become major problems.
- Teachers should use AI-powered analytics to provide insights and recommendations on student performance, attendance, and behavior.
- School administrators should develop AI-powered virtual learning environments to provide students with immersive and interactive learning experiences.
- Teachers should implement AI-powered automated grading systems to help teachers grade assignments and exams more efficiently and accurately.

ABSTRACT

This paper discussed instructional supervision strategies for effective goal attainment in public senior secondary schools in Rivers State. The quality of education in public senior secondary schools is essential for the socio-economic development of any region. In Rivers State, Nigeria, the education sector faces challenges like underfunding, a shortage of skilled teachers, and limited resources. However, the main issue is the lack of effective instructional supervision. This supervision is important for ensuring that teachers deliver lessons well, follow the curriculum, and enhance the learning experience. Without proper oversight, students may not reach their full potential, and educational goals may not be achieved. Instructional supervision is a process where educators, like supervisors or school leaders, observe and support teachers to improve their teaching methods and effectiveness in the classroom. The paper was supported by the Vygotsky's Sociocultural Theory, developed by Vygotsky**,** which suggests that social nature of learning and the role of interaction, culture, and language in cognitive development. According to Vygotsky, learning is best achieved through collaborative engagement, where teachers and learners interact within the "Zone of Proximal Development" (ZPD). The paper identified instructional supervision strategies for effective goal attainment to include; peer observation and collaborative feedback, mentorship and coaching programs, regular classroom observations, professional development workshops, formative assessment, instructional planning and team collaboration, use of educational technology, action research, data-driven instruction and feedback loops. It therefore concluded that effective instructional supervision is essential for achieving educational goals in Rivers State's public senior secondary schools. The paper therefore suggested that principals and supervisors should implement peer observation programs to foster collaboration and enhance teaching practices in schools.

Keywords: Instructional Supervision, Strategies, Effective, Goal Attainment, Public, Senior, Secondary Schools, Rivers State.

INTRODUCTION

The quality of education in public senior secondary schools is pivotal to the socio-economic development of any region. Rivers State, one of Nigeria's key states, faces numerous challenges in its educational sector, including underfunding, a shortage of skilled teachers, and limited resources for effective teaching. However, the fundamental issue that affects the attainment of educational goals is the lack of effective instructional supervision (Ololube, 2017; Ige & Abimboye, 2018). Instructional supervision is crucial in ensuring that teachers effectively deliver content, meet curriculum standards, and improve the overall learning experience for students. Without this oversight, students may not achieve their full potential, and educational goals may remain unattainable.

The significance of instructional supervision becomes clear when considering its role in shaping teaching methods, providing professional development for teachers, and ensuring the alignment of classroom practices with educational goals. Akpan (2020) and Ige and Abimboye (2018) argued that that instructional supervision should be seen not just as a form of evaluation but as a collaborative process that empowers teachers to continuously improve their practices, fostering a culture of shared responsibility for student success. Instructional supervision must be viewed as a partnership where both supervisors and teachers work together to identify challenges and implement strategies for professional growth. This approach not only enhances teacher competence but also fosters an environment where teachers feel supported, thereby directly influencing the academic success of students. In Rivers State, a lack of adequate training for teachers, inconsistent supervisory practices, and insufficient resources are hindrances to effective supervision, making it essential to adopt strategies that can help bridge these gaps. This paper, therefore, aims to explore instructional supervision strategies that can lead to the effective attainment of educational goals in public senior secondary schools in Rivers State.

THEORETICAL FRAMEWORK

The theory that support this paper is the Vygotsky's Sociocultural Theory, developed by Vygotsky in 1978 cited in Harrison (2023). The theory emphasized the social nature of learning and the role of interaction, culture, and language in cognitive development. According to Vygotsky, learning is best achieved through collaborative engagement, where teachers and learners interact within the "Zone of Proximal Development" (ZPD). The ZPD refers to the gap between what a learner can do independently and what they can do with guidance or collaboration (Vygotsky, 1978 cited in Harrison, 2023).

In the context of this paper, Vygotsky's theory is highly relevant as it highlights the importance of social interaction between teachers, supervisors, and peers. Instructional supervision is more than just monitoring; it should be an interactive process where supervisors guide teachers in overcoming challenges, learning new strategies, and refining their practices. Supervisors who provide supportive feedback, mentoring, and professional development help teachers to progress through their ZPD, leading to improved teaching effectiveness. Similarly, Vygotsky's emphasis on cultural context means that instructional supervision strategies should be tailored to the unique needs and characteristics of Rivers State, considering the region's specific educational and social conditions (Owolabi, 2017). For example, instructional strategies in Rivers State should reflect local educational priorities, resource constraints, and the particular challenges faced by teachers in the region. The sociocultural theory underlines the importance of collaboration and interaction in instructional supervision. Utilizing Vygotsky's ideas,

instructional supervisors in Rivers State can work more effectively with teachers to improve their teaching practices and, in turn, increase the likelihood of achieving educational goals.

Instructional Supervision

Instructional supervision refers to a systematic process in which educators (often supervisors or school leaders) observe, guide, and support teachers to improve their instructional practices and overall effectiveness in the classroom. It involves various activities aimed at enhancing teaching and learning, ultimately leading to improved student outcomes. The primary goal is to ensure that teaching methods are aligned with educational standards and that teachers have the necessary support and resources to be successful. Ololube (2017) defined instructional supervision as a process of providing systematic feedback to teachers with the goal of enhancing their teaching effectiveness and ensuring that instructional goals are met. This definition emphasizes the importance of structured, continuous feedback in instructional supervision. The process is not a one-time event but an ongoing mechanism where teachers receive feedback that helps them reflect on their teaching practices and improve. This feedback serves as a crucial tool for identifying areas of strength and weaknesses in teaching methods, ultimately ensuring that the objectives of the curriculum are successfully achieved.

Ige and Abimboye (2018) described instructional supervision as a mechanism for evaluating and supporting teachers' practices, with the ultimate aim of improving student learning outcomes and achieving educational goals. They viewed instructional supervision not merely as an evaluative tool but as a support system that aims to elevate both teaching quality and student performance. The evaluation aspect is not limited to assessing the teacher's methods but extends to identifying areas where support is needed, such as providing resources or professional development. Akpan (2020) characterized instructional supervision as an ongoing process of evaluating and refining teaching methods through observation, feedback, and professional development initiatives. The definition highlights instructional supervision dynamic and continuous nature. Rather than a singular event, instructional supervision is an iterative process that involves frequent observations and reflective feedback loops.

Teachers are encouraged to refine their methods continually, which are supported by ongoing professional development initiatives. This characterization positions instructional supervision as a proactive, rather than reactive, endeavor, with the aim of continuous teacher growth and the adaptation of teaching methods to meet the evolving needs of students and the curriculum. Akinleye (2021) explained instructional supervision as a collaborative process between supervisors and teachers to improve pedagogical practices and align them with educational objectives. The definition stressed collaboration as the core of effective instructional supervision. Instructional supervision, in this view, is not a top-down process but a joint effort between supervisors and teachers to enhance teaching practices. The idea of alignment with educational objectives ensures that teaching methods are not only effective but also closely tied to the curriculum's goals.

Madu and Nwosu (2022) defined instructional supervision as a dynamic process that incorporates observation, feedback, and continuous professional development to ensure that teachers are equipped to meet curriculum standards and educational goals. The definition emphasized the multifaceted nature of instructional supervision. It highlights the importance of incorporating a variety of methods observation, feedback, and ongoing professional development into the supervision process. This comprehensive approach ensures that teachers are not only

observed and provided with feedback but are also given the tools and resources they need to continuously improve their teaching practices. The dynamic nature of this process is crucial, as it recognizes the ever-changing demands of the educational landscape, requiring constant adaptation and growth in teaching practices to meet curriculum standards and achieve educational goals.

Instructional Supervision Strategies

Instructional Supervision Strategies refer to the specific approaches, techniques, and practices employed by instructional supervisors (such as school administrators, headteachers, or designated supervisory staff) to improve teaching and learning outcomes. These strategies are designed to guide, support, and assess teachers' instructional practices to ensure alignment with educational standards, curriculum objectives, and overall school goals. The aim of these strategies is to foster an environment where teachers continuously develop their skills, refine their teaching practices, and, ultimately, improve student learning outcomes. Williams (2022) defined instructional supervision strategies as the deliberate and planned activities that supervisors employ to monitor, evaluate, and improve teaching practices within the classroom. These strategies are aimed at providing targeted support for teachers to enhance their pedagogical skills and ensure that curriculum standards and educational objectives are being met. The definition emphasized that these strategies involve a combination of observation, regular feedback, and professional development to empower teachers and foster a culture of continuous improvement. The vital goal is to ensure that teaching methods are effective, student learning is optimized, and school goals are achieved.

In the context of Rivers State, Instructional Supervision Strategies encompass a variety of approaches and practices aimed at enhancing teaching effectiveness, improving student learning outcomes, and ensuring that educational objectives are met. These strategies are specifically tailored to address the unique challenges faced by public senior secondary schools in the region, such as limited resources, inconsistent teacher training, and varied teaching practices. The following strategies are critical to improving instructional practices and achieving academic success in Rivers State:

- Peer Observation and Collaborative Feedback: Teachers observe one another's classes and provide constructive feedback. This approach promotes professional growth and fosters a culture of collaboration among teachers (Johnson, 2019).
- Mentorship and Coaching Programs: Experienced teachers are paired with novice teachers to guide them in their teaching practices. This strategy helps less experienced teachers navigate classroom challenges and develop their teaching skills (Fredrick, 2020).
- Regular Classroom Observations: Supervisors conduct regular classroom visits to observe teaching practices and provide actionable feedback. This ensures that instructional methods are aligned with educational goals (Austin, 2018).
- Professional Development Workshops: Continuous professional development through workshops and seminars ensures that teachers remain current with new teaching methodologies and strategies (Carter, 2021).
- Formative Assessment: Regular formative assessments allow teachers to track student progress and adjust their instructional strategies accordingly (Anderson, 2020).

- Instructional Planning and Team Collaboration: Teachers are encouraged to collaborate on lesson planning and curriculum design, ensuring consistency in instructional delivery (Bruce, 2019).
- Use of Educational Technology: Integrating technology in the classroom can enhance student engagement and learning outcomes. Supervisors should encourage teachers to utilize digital tools (Daniel, 2018).
- Action Research: Teachers are encouraged to engage in action research to assess their teaching practices and make data-driven improvements to their instructional methods (Rufus, 2021).
- Data-Driven Instruction: Instructional decisions should be based on data collected from student assessments and classroom observations, allowing teachers to tailor their methods to the needs of their students (Elvis, 2020).
- Feedback Loops: Creating a system of continuous feedback where teachers receive constructive input from supervisors, peers, and students can help to refine teaching strategies and improve student outcomes (Martins, 2020).

Goal Attainment

Goal attainment in education refers to the achievement of specific educational objectives, whether these are academic targets, skills development, or personal growth for students. Sharma (2018) defined goal attainment as the successful achievement of established educational objectives, particularly in terms of student learning outcomes and academic performance. This definition emphasizes that goal attainment is not a singular event but a continuous process where the primary measure of success is the learning outcomes of students. In other words, the ability of students to grasp, understand, and apply the knowledge and skills taught within a specific curriculum is central to evaluating goal attainment.

Similarly, Kanu (2019) described goal attainment as the realization of desired educational outcomes, such as improved student performance, teacher effectiveness, and the overall success of school programs. His definition broadens the scope of goal attainment to include not just the academic performance of students but also the effectiveness of teachers and the success of school-wide programs. From this perspective, goal attainment goes beyond individual student outcomes and looks at the broader ecosystem of education teachers, curricula, school culture, and administrative support. It highlights that educational success is a multifaceted endeavor that involves the collaborative efforts of all stakeholders within the education system. Johnson and Smith (2020) viewed goal attainment as the process through which both individual learners and the educational institution as a whole strive to meet their educational objectives. They focus on goal attainment as a dual process one that is not only about the learners' success but also about the institution's capacity to support and guide them toward achieving those objectives. This implies that goal attainment is a dynamic process involving both the learner's individual efforts and the institutional structures that facilitate learning.

Williams (2021) described goal attainment as a measure of success in educational programs, with a particular emphasis on the academic and personal development of students. His perspective connects the concept of goal attainment not only to academic achievement but also to the holistic development of the learner. This includes the personal, social, and emotional growth of students, which is critical in the context of developing well-rounded individuals. Thus, goal

attainment becomes not only a metric for academic success but also a framework for fostering students' personal growth, social engagement, and lifelong learning skills.

Anderson (2022) linked goal attainment to the successful delivery of learning content, where the teaching and learning processes effectively contribute to achieving academic and developmental targets. The definition stressed the importance of effective teaching practices in achieving goal attainment. It suggests that the way teaching content is delivered through the use of appropriate methods, resources, and instructional strategies plays a crucial role in whether or not educational objectives are met. Teaching is thus not just about content knowledge but about the approach to delivering that content in ways that engage students and help them internalize the learning goals.

Effective instructional practices are the key drivers of goal attainment in education. For educational institutions, including those in Rivers State, achieving educational goals requires focused efforts from all stakeholders, especially in ensuring that teaching strategies align with curriculum standards and the developmental needs of students. Supervisors play a critical role in guiding teachers to implement effective instructional practices and ensuring that educational goals are met. Supervisors are the facilitators who help teachers reflect on their methods, provide them with professional development opportunities, and create an environment where goal attainment is a shared responsibility. Through regular evaluations, feedback, and ongoing support, supervisors can help teachers adjust their teaching methods to better meet the diverse needs of students, ensuring that both academic and personal growth goals are achieved.

Instructional Supervision Strategies for Effective Goal Attainment

Instructional supervision plays a critical role in enhancing the quality of education and achieving educational goals in public senior secondary schools. In Rivers State, as in many other regions, the effectiveness of teaching and learning is influenced by various factors, including the supervision and support provided to teachers. A well-structured and purposeful instructional supervision strategy not only promotes professional development among educators but also ensures that students receive high-quality instruction that aligns with curriculum standards. To facilitate the attainment of educational goals, it is essential to implement effective instructional supervision strategies that foster a culture of continuous improvement, collaboration, and accountability within schools. The following are some key instructional supervision strategies that can contribute to achieving these goals in public senior secondary schools in Rivers State:

Peer Observation/Collaborative Feedback and Effective Goal Attainment

Peer observation and collaborative feedback are significant components of educational development, particularly in the context of teacher effectiveness in public schools. Peer observation involves teachers observing one another's teaching practices to gain insights into different instructional strategies and methods. This collaborative approach allows for an exchange of knowledge and fosters professional learning communities within schools. It provides an opportunity for teachers to reflect on their own teaching techniques while also learning from their colleagues (Ainsworth & Viegut, 2016). Collaborative feedback, on the other hand, refers to the practice where teachers engage in a dialogue to provide constructive criticism and suggestions for improvement based on observations. This feedback is usually reflective and aimed at enhancing instructional quality.

In peer observation, the feedback process is often non-evaluative, emphasizing growth and improvement rather than judgment. This collaborative process encourages mutual trust and promotes a supportive professional environment (Guskey & Bailey, 2016). Peer observation can lead to improved teaching practices, as teachers become more aware of the effectiveness of their strategies and the areas where they need to improve (Leana, 2016). Furthermore, collaborative feedback helps to build a culture of continuous learning among teachers, creating an environment where best practices are shared and adopted by peers (Desimone, 2017).

Similarly. Boud and Walker (2017) emphasized that the use of peer observation and feedback not only enhances teaching skills but also fosters greater teacher satisfaction by creating a collaborative and supportive environment. They argued that this process helps teachers reflect on their practice, identify areas for improvement, and develop new strategies to engage students. More-so, Bell and Cooper (2018) noted that when teachers engage in collaborative peer observations, they often experience a stronger sense of accountability and responsibility for student outcomes. This, in turn, improves the overall teaching environment and has a positive impact on student achievement. The implementation of peer observation and collaborative feedback in schools creates a reflective atmosphere where teachers continually assess and improve their instructional methods. Through these practices, teachers are better equipped to address the diverse learning needs of students, which is essential in achieving educational goals.

Peer observation and collaborative feedback play a crucial role in fostering a culture of continuous improvement among educators. Cook and Ray (2020) found that these practices contribute significantly to the professional growth of teachers and the improvement of school culture by encouraging reflection, dialogue, and shared learning. This collaborative approach helps teachers enhance their teaching methods while also creating a more supportive and cohesive school environment. This has profound implications for Rivers State, where the educational system continues to face challenges regarding teacher effectiveness and the attainment of academic goals. Implementing peer observation and collaborative feedback in Rivers State schools will foster professional growth, enhance teaching practices, and ultimately improve student learning outcomes.

Mentorship/Coaching Programs and Effective Goal Attainment

Mentorship and coaching programs are essential for the professional growth of educators, providing personalized support that helps teachers navigate their careers more effectively. In a mentorship program, experienced teachers (mentors) provide guidance to novice teachers (mentees) through a supportive, one-on-one relationship. This relationship can last for a predetermined period and typically focuses on developing specific teaching skills, classroom management strategies, and subject knowledge (McDonald, 2016). Coaching, on the other hand, is a more targeted and often short-term process that aims to improve specific teaching techniques through continuous feedback and professional development (Knight, 2017). Mentorship programs have been shown to improve teacher retention rates, particularly in the early years of a teacher's career, as new educators feel more supported and integrated into the teaching profession (Ingersoll & Strong, 2017).

Furthermore, mentors can provide advice on navigating school culture, handling the challenges of student behavior, and implementing evidence-based teaching practices. Coaching programs, by contrast, focus on specific areas of instruction, such as effective questioning techniques, classroom management, and the use of formative assessments (Borko, 2017). Daniels

and Klenowski (2018) emphasized that coaching leads to improved teacher practices by fostering self-reflection and offering targeted interventions that address individual teaching needs. They highlighted that coaching creates a personalized support system, allowing teachers to receive feedback tailored to their unique challenges and strengths. This process not only enhances instructional techniques but also promotes a deeper understanding of effective teaching strategies, ultimately benefiting both educators and their students.

Moreover, mentorship and coaching programs are key components of professional development that support teachers in their growth and effectiveness. Showers and Joyce (2016) indicate that mentorship and coaching are both highly effective in enhancing teacher confidence and competence, which ultimately leads to improved student achievement. These programs provide teachers with the guidance and feedback needed to refine their skills, build their professional self-efficacy, and create a more positive and productive learning environment for students. Strong (2016) found that mentorship programs, when implemented effectively, can transform the instructional practices of new teachers, especially when paired with regular observations and feedback. The role of mentors in providing emotional support and practical teaching tips can be pivotal in shaping the future success of novice educators (Baker, 2017). Similarly, the use of coaching programs, particularly in schools that face significant challenges in terms of student performance, can be a powerful tool in aligning instructional practices with school-wide goals (Bambrick-Santoyo, 2016). Rivers State's education system faces significant challenges related to teacher development and the consistent achievement of academic goals. The introduction of mentorship and coaching programs can significantly enhance teacher effectiveness and provide the necessary support to new educators, ultimately improving overall educational outcomes in the state.

Regular Classroom Observations and Effective Goal Attainment

Classroom observation is a critical component of instructional supervision, as it offers a direct and authentic method of evaluating a teacher's effectiveness. Regular classroom observations involve instructional leaders, such as principals or peer teachers, visiting classrooms to monitor teaching practices, assess student engagement, and evaluate the alignment between teaching strategies and curriculum objectives. Observations provide valuable insights into how teaching practices impact student learning and can inform subsequent professional development initiatives (Sartain, 2016).

Regular classroom observations have a profound impact on teacher development, as they allow supervisors to give real-time feedback that is directly linked to classroom practice (Garet et al., 2016). Similarly, observations allow teachers to receive constructive criticism in a supportive context, fostering a sense of trust and collaboration between teachers and administrators (Berliner, 2016). This process not only helps teachers identify areas for improvement but also strengthens relationships within the school community. Engaging in reflective dialogue through observations, both teachers and administrators can work together to enhance teaching practices, which ultimately benefits student learning outcomes. These observations serve as a basis for discussions on areas of improvement, and they often help to identify professional development needs that can be addressed through targeted workshops or training (Mizell, 2017). The regularity of classroom observations is key in providing sustained support to teachers. Darling-Hammond et al. (2017) noted that ongoing observations allow for continuous feedback loops,

which are necessary for long-term professional growth. This approach contrasts with sporadic or one-time evaluations, which do not provide the same depth of support.

Continuous observation fosters a culture of continuous improvement, enabling teachers to make gradual, sustained changes to their practices. Receiving regular, actionable feedback, teachers are better equipped to adapt and refine their teaching methods, leading to enhanced instructional quality and better student outcomes over time. Regular classroom observations play a crucial role in improving teaching practices by providing teachers with valuable insights and feedback on their instructional methods. Hattie and Timperley (2016) found that frequent and focused classroom observations led to significant improvements in teaching practices and, consequently, in student achievement. These observations offer teachers the opportunity to reflect on their performance, identify areas for growth, and implement strategies that directly benefit their students' learning experiences. Moreover, regular classroom observations serve as an important tool for holding teachers accountable, ensuring that they maintain high standards of instruction and remain committed to professional growth (Danielson, 2016).

For Rivers State, regular classroom observations offer an opportunity to address gaps in teaching quality and ensure that instructional practices align with educational goals. The adoption of this strategy could foster a culture of continuous improvement, where teachers consistently refine their practice and contribute to the collective success of the school.

Professional Development Workshops and Effective Goal Attainment

Professional development workshops are structured programs designed to enhance the knowledge and skills of educators, typically focusing on pedagogical strategies, subject content, or classroom management. These workshops can be delivered through various formats, including in-person seminars, online courses, or collaborative learning sessions. Professional development workshops are particularly important in equipping teachers with the latest teaching methodologies and best practices that are proven to improve student outcomes (Guskey, 2016). Professional development workshops play a significant role in enhancing educators' skills and teaching practices. Darling-Hammond et al. (2017) emphasized that high-quality professional development is crucial for improving teaching effectiveness, as it enables educators to continuously refine their skills and adapt to evolving teaching demands. Workshops that are aligned with school goals and individual teacher needs have a greater impact on teacher practice and student achievement (Desimone, 2017).

Professional development workshops that focus on active learning and collaboration are key to fostering effective teaching. Harrison (2018) stressed that professional development that emphasizes active learning, provides opportunities for collaborative practice, and is sustained over time leads to significant improvements in teaching. Furthermore, professional development workshops allow teachers to engage with the latest research and strategies in education, making it possible for them to adapt to changing educational trends and address the evolving needs of their students (Mizell, 2016). The effectiveness of professional development workshops is closely tied to their ability to engage teachers in ongoing learning and reflection. Workshops that provide teachers with tools for implementing new strategies in their classrooms are more effective than those that focus solely on theoretical knowledge (Garet et al., 2016).

Opfer and Pedder (2016) emphasized that professional development programs that involve teachers in planning and executing new teaching practices lead to more sustainable changes in classroom behavior and student outcomes. When teachers are equipped with the

necessary skills through professional development workshops, they are better able to meet the diverse needs of students and foster a more inclusive and supportive learning environment. In Rivers State, professional development workshops can play a pivotal role in addressing the gaps in teaching practices and ensuring that teachers are equipped to meet the challenges of modern education. Regular, targeted workshops can contribute significantly to raising the overall standard of education in the region and enhancing student learning outcomes.

Formative Assessment and Effective Goal Attainment

Formative assessment is a powerful strategy used in instructional supervision to monitor student learning and provide ongoing feedback that can inform teaching practices. It involves the use of various assessment techniques such as quizzes, assignments, discussions, and peer evaluations that are designed to gauge students' understanding and progress in real time (Black & Wiliam, 2016). Formative assessments are conducted throughout the learning process and serve as a diagnostic tool to inform both teachers and students about areas that require further attention.

Formative assessment as an instructional supervision strategy is important because it allows teachers to adjust their instructional approaches based on the immediate needs of students. Sadler (2016) stressed that formative assessments promote active learning and provide teachers with the information necessary to personalize instruction. Furthermore, formative assessments are linked to improved student motivation and achievement, as they offer frequent opportunities for feedback and improvement (Hattie & Timperley, 2016). Formative assessment plays a vital role in helping students monitor their progress and take ownership of their learning. Providing timely feedback and opportunities for reflection, it helps students identify areas for improvement. Dweck (2016) emphasized that the use of formative assessments encourages students to take responsibility for their learning and fosters a growth mindset. This approach helps students view challenges as opportunities for growth, rather than as obstacles.

Formative assessment is most effective when it is seamlessly integrated into daily instruction, enabling teachers to make real-time adjustments. Wiliam (2017) emphasized that formative assessments are most effective when they are closely integrated with instructional strategies. This allows teachers to adjust lessons, activities, and assignments to better suit the needs of students. Formative assessment provides teachers with valuable insights into student understanding, enabling them to identify challenges early on and provide targeted support. Using ongoing feedback, teachers can make adjustments that promote student success. Brookhart and Guskey (2017) found that formative assessments enhance teachers' ability to recognize when students are struggling and adjust their teaching methods accordingly. This process ultimately helps create a more responsive and supportive learning environment. Moreover, when formative assessments are used as part of instructional supervision, they provide valuable insights into teaching effectiveness and offer an opportunity for reflective practice (Stiggins, 2016).

For Rivers State, the adoption of formative assessment as a supervision strategy will provide an avenue for teachers to improve their practice and increase student achievement. Formative assessments will ensure that instruction is responsive to students' needs, which is vital in a region that faces challenges in meeting educational standards.

Instructional Planning/Team Collaboration and Effective Goal Attainment

Instructional planning and team collaboration are fundamental elements of successful educational practices, particularly in the context of improving teaching and learning outcomes in schools. Instructional planning refers to the systematic approach to designing and organizing learning experiences that meet the diverse needs of students, ensuring that the curriculum is effectively delivered. It involves setting clear objectives, selecting appropriate teaching strategies, and determining assessment methods that allow teachers to gauge student progress (Guskey, 2016). Effective instructional planning not only contributes to the overall structure and coherence of the educational process but also ensures that students receive quality instruction that is both engaging and academically challenging. Team collaboration, on the other hand, emphasizes the importance of working together in groups of educators to achieve common teaching goals. When teachers collaborate, they share their expertise, develop new strategies, and support each other in addressing classroom challenges. Collaboration promotes the sharing of best practices and leads to a more unified approach in addressing student learning needs (Hargreaves, 2017). Teacher collaboration plays a crucial role in enhancing the effectiveness of instruction and student outcomes. Leana (2016) indicated that teacher collaboration is associated with improved student performance, as it encourages reflective practice, boosts morale, and strengthens the collective knowledge of the teaching community. This shared approach to teaching fosters a culture of continuous improvement and support among educators. Collaboration also supports professional growth, as teachers receive constructive feedback from their peers and engage in problem-solving activities to address teaching challenges (Dufour, 2016).

Collaborative planning among teachers allows for the sharing of ideas and resources, creating a more unified approach to instruction. Vescio et al. (2017) emphasized that collaborative planning among teachers fosters more effective teaching strategies and enhances student engagement. This teamwork encourages innovative practices that better meet the diverse needs of students. Furthermore, collaboration helps teachers align their instructional goals, ensuring consistency in the delivery of lessons and more comprehensive coverage of the curriculum. This cooperative environment also helps in managing classroom dynamics and adapting teaching methods to the specific needs of students (Timperley, 2016). Moreover, Darling-Hammond et al. (2016) found that schools that promote collaboration among teachers see significant improvements in student achievement, as the collective expertise of the staff enhances the overall quality of instruction.

In Rivers State, where there are significant challenges in terms of teacher capacity and student performance, adopting instructional planning and team collaboration can serve as a powerful strategy to address these issues. Encouraging teachers to plan together, share resources, and collectively address classroom challenges, it is possible to create a culture of continuous improvement that enhances both teaching practices and student outcomes.

Use of Educational Technology and Effective Goal Attainment

The use of educational technology has become an indispensable tool in modern education, offering new opportunities for teachers and students to engage with the learning process. Educational technology encompasses a wide range of digital tools and resources, such as computers, tablets, online learning platforms, and educational software that support teaching and learning. These tools can enhance instructional delivery by offering interactive, engaging, and personalized learning experiences that cater to diverse student needs (Becker, 2017). The

integration of technology in the classroom is seen as a means of preparing students for the demands of the digital age, equipping them with essential skills such as problem-solving, critical thinking, and digital literacy.

The benefits of educational technology in classrooms is extensive and demonstrates its positive impact on student engagement and achievement. Studies show that when used effectively, technology can motivate students to learn, provide immediate feedback, and allow for individualized learning experiences (Hattie, 2016). Furthermore, technology helps bridge the gap between traditional and modern learning styles, making lessons more dynamic and accessible (Ertmer & Ottenbreit-Leftwich, 2016). Educational technology can also promote collaborative learning, where students interact with peers and teachers online, participate in virtual discussions, and engage in collaborative projects (Puentedura, 2016). The use of educational technology has become a powerful tool in enhancing learning experiences and improving student outcomes. Lai et al. (2017) indicated that technology can significantly improve student performance, especially in subjects like mathematics and science, by providing interactive simulations and real-time data analysis.

Technology also allows teachers to track student progress more effectively, using data-driven tools that help identify learning gaps and adapt instruction accordingly (Chong et al., 2018). Similarly, the accessibility of online resources gives students the opportunity to learn beyond the classroom, encouraging independent learning and fostering a more student-centered approach to education (Kim, 2017). For Rivers State, where there are challenges related to outdated teaching methods and limited resources, integrating educational technology could be the key to transforming teaching and learning experiences. Leveraging digital tools and platforms, educators can enhance student engagement, improve learning outcomes, and ensure that students are equipped with the necessary skills for the future workforce. This will not only improve the quality of education but also help bridge the gap in access to quality learning resources, which remains a challenge in many schools in the region.

Action Research and Effective Goal Attainment

Action research is a reflective, systematic process in which teachers investigate their own teaching practices to improve their effectiveness and the learning outcomes of their students. This type of research is typically conducted by educators themselves, often in collaboration with their colleagues, to identify areas for improvement, test new strategies, and evaluate the impact of changes made in the classroom. Action research is distinguished from traditional research in that it is applied and results-oriented, focusing on solving real problems in real classrooms (Mills, 2016). The action research process involves several stages: identifying a problem or question, collecting data, implementing a change, and analyzing the results to assess whether the change led to improved student outcomes (Elliott, 2016). This cycle is ongoing, as educators continuously refine their practices based on the data collected. A key benefit of action research is that it empowers teachers to take ownership of their professional development and make data-driven decisions about their instructional practices (Cochran-Smith & Lytle, 2017). Through this process, teachers gain valuable insights into what works and what doesn't, allowing them to adapt their teaching to better meet the needs of their students.

Action research provides teachers with the opportunity to reflect on and refine their teaching methods through systematic inquiry. Hiebert et al. (2017) found that action research leads to a deeper understanding of teaching practices, improved student engagement, and

enhanced teacher confidence. This process encourages continuous professional growth and fosters a more effective learning environment. Moreover, action research fosters a culture of continuous improvement, where teachers are encouraged to experiment with new approaches and share their findings with colleagues, thus contributing to a broader school-wide improvement process (Baumfield et al., 2016). In Rivers State, where the quality of teaching is often impacted by a lack of professional development and support, action research can provide teachers with a tool to enhance their practice and contribute to the overall improvement of educational outcomes. Engaging in action research, teachers can identify specific challenges they face in the classroom, test innovative solutions, and refine their approaches to teaching, ultimately leading to more effective and personalized instruction.

Data-Driven Instruction and Effective Goal Attainment

Data-driven instruction refers to the use of student performance data to guide teaching practices and improve educational outcomes. This approach involves collecting and analyzing data from various sources, including standardized test scores, formative assessments, student surveys, and classroom observations, to inform instructional decisions (Gates & Neidorf, 2016). The goal of data-driven instruction is to tailor teaching strategies to the specific needs of students, ensuring that each learner receives the appropriate level of support to succeed.

One of the primary benefits of data-driven instruction is its ability to help teachers identify areas of weakness in their students' learning and adjust their teaching methods accordingly. Hamilton et al. (2016) emphasized that data-driven instruction allows teachers to target specific skills that students are struggling with, leading to more focused and effective interventions. This approach helps to address learning gaps and supports student progress more efficiently. This targeted approach ensures that instructional time is spent on areas where students need the most help, rather than adopting a one-size-fits-all approach (Bernhardt, 2016). Data-driven instruction not only supports individual teacher effectiveness but also promotes a collaborative school culture. Data-driven instruction fosters collaboration among teachers and other school staff, as they can share insights derived from data to develop strategies for school-wide improvement (Boudett et al., 2016). This collective approach ensures that efforts are aligned and that all students receive the support they need to succeed. When schools adopt a data-driven approach, they are better positioned to track student progress over time, identify trends, and make proactive adjustments to curriculum and instruction (Love, 2016). This approach allows for more timely interventions and ensures that instructional strategies are aligned with the evolving needs of students.

Data-driven instruction has proven to be an invaluable tool for educators and school leaders alike, providing actionable insights that directly impact teaching and learning outcomes. Hattie (2015) highlighted that one of the major benefits of using data in education is its ability to inform decisions about resource allocation. Analyzing data, schools can pinpoint where resources are most needed, whether that be in specific subject areas, grade levels, or particular student populations. Similarly, data can help schools identify areas where teachers may need professional development, such as in integrating technology into the classroom or in differentiating instruction for diverse learners (Jackson, 2023).

Data-driven instruction allows for the continuous monitoring of both student and teacher progress. Bryk et al. (2015) argued that by regularly using data to track progress, schools can identify emerging trends, gaps in learning, and areas where students may need additional

support. This ongoing assessment enables schools to implement targeted interventions in real-time. Moreover, consistent analysis of student data, when paired with supportive leadership, has been shown to result in higher levels of student achievement. Wiliam (2016) emphasized that the leadership within a school plays a critical role in making data-driven instruction effective. Strong leadership ensures that data is not just collected, but also analyzed and acted upon. When school leaders use data to guide decisions and provide teachers with the necessary support and training, teachers are more likely to implement data-driven strategies effectively in their classrooms.

Additionally, a supportive leadership team helps foster a school culture in which data is viewed as a valuable tool for improvement rather than as a means of judgment or punishment. For Rivers State, where there are concerns about the effectiveness of teaching and the achievement of educational goals, data-driven instruction provides an opportunity to make informed decisions about student learning. Systematically collecting and analyzing data, educators can better understand the needs of their students, identify gaps in knowledge, and implement strategies to improve learning outcomes.

Feedback Loops and Effective Goal Attainment

Feedback loops are a critical aspect of instructional supervision, enabling teachers to receive continuous, timely, and constructive feedback on their teaching practices. Feedback loops involve an ongoing cycle where teachers receive feedback from their supervisors, peers, or students, reflect on this input, and make adjustments to their teaching strategies. This process allows for continuous improvement and fosters a culture of reflective practice (Hattie & Timperley, 2016). The goal of feedback loops is to create an environment where teachers feel supported and motivated to improve their instructional practices, leading to better student learning outcomes.

Effective feedback is a crucial component of professional growth, providing teachers with valuable insights into their teaching practices. Black and Wiliam (2016) emphasized that effective feedback helps teachers understand what they are doing well, where they need to improve, and how they can make those improvements. This process supports continuous development and enhances overall teaching effectiveness. Feedback loops that incorporate regular check-ins, peer observations, and self-reflection are particularly effective in helping teachers refine their practice and achieve instructional goals. Wiliam (2016) highlighted that these strategies create a cycle of ongoing improvement, allowing teachers to adjust their methods based on continuous feedback, leading to enhanced student outcomes. Feedback from students can be a valuable source of information, as it provides insight into how students perceive the effectiveness of teaching methods and what adjustments may be necessary.

Bryk et al. (2016) noted that such feedback allows teachers to better understand student needs, refine their instructional approaches, and create a more engaging and responsive learning environment. Feedback loops create a structured approach for ongoing reflection and growth in the classroom. Sugai et al. (2017) found that feedback loops lead to improvements in classroom management, student engagement, and overall instructional quality. These cycles of feedback help teachers identify areas for growth and make targeted adjustments that enhance the learning environment. Teachers who receive regular feedback are more likely to implement changes that improve student outcomes and foster a positive learning environment. Bell and Cooper (2018) emphasized that consistent feedback helps educators refine their practices, ultimately leading to more effective teaching strategies and better student engagement.

In Rivers State, where educational standards can often fall short due to a lack of systematic support and guidance, implementing feedback loops as an instructional supervision strategy offers a path to ongoing improvement. Teachers will benefit from continuous, actionable feedback that helps them refine their practices and achieve better results for their students.

CONCLUSION

Effective instructional supervision is essential for achieving educational goals in Rivers State's public senior secondary schools. Adopting strategies such as peer observation, mentoring, and data-driven instruction, schools can address the challenges they face and ensure that teaching practices align with curriculum standards and goals. The theoretical framework of Vygotsky's Sociocultural Theory provides valuable insight into the collaborative nature of instructional supervision, emphasizing the need for social interaction and support between teachers and supervisors. This collaboration not only enhances teaching practices but also fosters a culture of continuous improvement and professional growth within the school community.

Suggestions

To enhance the overall effectiveness of teaching and learning within schools, several strategies can be implemented. Here are some key suggestions for improving instructional practices and fostering a collaborative environment:

- Principals and supervisors should implement peer observation programs to foster collaboration and enhance teaching practices in schools.
- Experienced Teachers should mentor less experienced teachers, guiding them through instructional challenges and ensuring effective pedagogical practices.
- School Administrators should organize regular professional development workshops to keep teachers updated on modern instructional methods and technologies.
- Supervisors should conduct frequent classroom observations and provide constructive feedback to teachers on their teaching practices.
- Teachers should engage in data-driven instruction, tailoring their teaching methods based on student performance data.
- School Boards should provide adequate resources for the integration of technology into teaching, improving engagement and learning outcomes.
- Parents and Guardians should support the school system by reinforcing academic expectations and creating a conducive learning environment at home.
- Government Officials should prioritize educational reforms that address the challenges faced by schools in Rivers State.
- Teachers should use formative assessments to evaluate student progress regularly and adjust their instructional methods accordingly.
- Educational Leaders should foster a culture of continuous improvement through the use of feedback loops and action research.

ABSTRACT

The paper examined school financing for effective maintenance of educational facilities and administration of secondary schools in Rivers State, Nigeria. Finance is the life wire and important resource in the school organization which plays a crucial role in educational growth. It is an economic resources that re targeted at achieving the educational objectives. Finance is very important in the school's existence, because with it all essential elements can be obtained. Teaching facilities are items built to meet different purposes. Various educational services exist in the school system, which promote teaching and learning. They are used to demonstrate ideas, offer opportunities for first-hand experience, exploration and presentation, scientific study and development, and breadth in thought. Indirect or educational funding for educational institutions such as offices, coffee shops, toilets, cleaning rooms and common halls meets the physical and emotional requirements of the person. On the basis of these claims, schools and the education system will make an attempt, as they are oriented to the aims, to provide such facilities. The paper in its conclusion asserted that school finance is concerned with the income and expenditure of authorities of educational institutions to achieve the objectives of the school for the achievement national development. It goes to expand that without the effective provision of school finance, the school system will struggle if not to achieve their targets. The paper further suggested that the government should allocate a higher percentage of the annual budget to education, ensuring sufficient funds for school maintenance and administration and schools should adopt preventive maintenance schedules to reduce long-term costs and improve the durability of school facilities.

Keywords: School Finance, School Maintenance, Educational Facilities.

INTRODUCTION

Without the availability of school facilities, no school can exist, either at the primary, secondary and tertiary levels, as this had constituted one of the important factors in teaching and learning process performance. However, due to the economic sector, the educational system is seen as a useful means of achieving national and global growth. The academic institutions are putting a

crucial role in the transfer of their important ideals from one generation to another. The main aim of the teaching and learning process is to bring about positive and lasting change of actions by means of critical reasoning in the learner. This educational process cannot take effect in a closed system, but rather in a structured setting to facilitate positive learning that will bring desirable change to the learners.

School facilities are related to the core elements of direct and indirect activities in the purposeful school environment. Different scholars proved that there is no significant difference between physical and academic performance of the student in schools. The type or standard of treatment a student receives has a greater effect on the physical resources accessible to the school in which learning processes take place. The school facilities are composed of all forms of infrastructure for academic and non-academic purposes, instruments for academic and non-academic activities, areas for sporting events and other recreational activities, parks, fields and gardens include plants, routes and pathways, comfort. These programs play a vital role in the actualization of education priorities and goals by meeting the physical and stimulating needs of the school's staff and students. In prime times, both the issue of school facilities had earned tremendous public thought as well as solid educators.

Building Success Educational Joint (BEST, 2005) reported that every administrator's responsibility is to ensure equal access by children to high-level sound education in schools that provide a teaching and learning backdrop. Effective management of school resources thus leads all students at every school to academic success. The educational system has acknowledged significant improvements in its strategic style, specific priorities, modern services delivery structure, the implementation and prolongation of instructional support programs, including learning counseling services, teachers and the community, school integration and social inclusion. The education system has also experienced a range of important improvements. The actual impact of all these changes is that creative directions are needed to finance and manage schools.

Schools had a role to play in guiding the duties of teaching and shaping the learning process of students both in and outside schools. No doubt, school buildings as an instrument for the creation of an efficient teaching and learning process have represented significant public finance investments in administrators' development and support. Dare (2010) defined school facilities as all the accessible or available properties of a school that can be used to advance and make easy effective teaching and learning as well as to protect the physical well-being of the learners. The school facilities are the outward expression of the school program of study. In other words, the school curriculum will largely decide the nature and the intent of the school facilities or structure to be built. In order to ensure its significance in school curriculums and efficient learning and education in educational institutes school facilities are required to be properly and carefully planned, built and maintained.

Therefore, the school's well-designed and functional buildings with a broad range of instructional aids successfully deliver the curriculum and are linked positively to the academic achievement of the student. A sufficient maintenance culture is one of the basic ways of ensuring the optimal use of available resources. Every school's maintenance culture speaks a lot about such a school. The general appearance of school facilities forms the basis for public opinion on the academic success in the school. The current economic recession worldwide has made it essential that in our education industry the Intense of the culture of maintenance be very loudly preached. Having established the economic justification for modernization, an appropriate funding and retention programme, the rehabilitation of physical infrastructure is imperative and

maintenance priority, as unattended deterioration and neglect of the building of schools may lead to higher lay conditions in the form of the loss of substitution. This time of economic difficulty cannot be afforded by schools; therefore, a culture of maintenance should be used wherever the school is occupied.

Moreover, maintenance means that we can pay less now, rather than wait to pay more in future, at a late date (Emenike 2023). Therefore, it is necessary for the few to be properly maintained and efficiently used for educational and educational purposes. It is totally unacceptable that millions of learners throughout the country have been learning in poor, sloppy, outdated and unhealthy buildings which hinder their learning and their overall well-being. Low-income schools are often unable to lease the capital needed to invest in their facilities' long-term stability. As a result of these shifts, they are forced to dig into their operating budgets-salary revenue, equipment etc. "As such, poor wealth schools are frequently caught up in a fatal loop. The short-term under cost of routine and precautionary maintenance results in much higher long-term construction cost; this is the gap this paper wishes to fill by examining school financing for effective maintenance of educational facilities and administration of secondary schools in Rivers State, Nigeria.

METHODOLOGY

This study adopts a theoretical research design, which relies on existing literature, policy documents, and relevant theoretical frameworks to examine the role of school financing in the effective maintenance of educational facilities in secondary schools in Rivers State, Nigeria. The methodology focuses on data collection through secondary sources and employs a qualitative approach to analyze relevant concepts, policies, and challenges associated with school financing and facility maintenance. The paper does not involve primary data collection but relies on secondary sources to explore the relationship between funding mechanisms and infrastructure sustainability in secondary schools. Data for this paper are obtained from, academic journals and books, government and policy documents, international reports and legislative documents. This paper employs a content analysis approach to examine trends, challenges, and solutions related to school financing for facility maintenance.

A theoretical analysis and reviews is used to identify patterns in financial policies, budget allocations, and their impact on the sustainability of educational facilities in secondary schools. Additionally, theoretical frameworks on educational funding, such as cost benefit analysis, guide the paper. This study focuses on secondary schools in Rivers State, Nigeria, specifically examining the adequacy of school financing for the maintenance of educational facilities. The research does not conduct field surveys or interviews but relies on secondary data to draw conclusions and provide recommendations. To ensure the credibility of findings, only current and relevant literature is reviewed, and data sources are cross-checked for authenticity. The paper adheres to academic integrity by using peer-reviewed and government-authorized documents.

THEORETICAL FRAMEWORK

This paper is anchored on theory of cost benefit analysis (C.B.A) propounded by Jule Depuit 1848 and formalized by Alfred Marshall in Wenner (2013) as cited in Camilleri (2024). The theory proposes that each education level must be seen as an investment in learners, and this

investment must be seen as a means of improving the national economy (Ebong, 2006). The theory serves as a framework for determining the worth of a project by comparing the cost and benefit of such project to arrive at the anticipated returns. The theory is also involved in the attempt to estimate the total cost of investment in education in terms of alternative opportunities foregone either by society or by private individuals. A rate of return analysis creates a presumption of how resources ought to be reallocated within the educational sector. Many economies have identified that all levels of education do not have the same rate of return. Therefore, the theory suits the study because it lays bases for seeing educational organization like other organizations and therefore should be weighed with the returns for such investment.

The theory however, evaluates the rational of incurring cost for the reason of providing education. The secondary school is such a system that is involved in meeting certain educational objective. These objectives are met by incurring cost which involves resource utilization and rationalization in a systematic way. However, it is on these bases that the theory serve as a bases to as it analyses the economic relevance of using up resources which would have been used for another sector to educational sector. This resource covers human, material, and even time expended on the course of acquiring education. The relevant of this theory to the paper is that it checks financial viability of undertaking educational cost, hence the maintenance of the school facilities which will reduce cost and save money for more investment in education.

CONCEPTUAL REVIEW

Concept of Education

Education is the best way to achieve full change to ensure pace of cultural, social, growth and all-encompassing national progress for every region. The poor condition of education facilities is a matter of great contention among educators in different learning institutions at the moment. A school of thought argues that the difficulty lies in the lack of the facilities necessary for the efficient teaching and learning of the learner accountable for the quality of Nigeria's unqualified graduate products, which tend to be static in all their academic efforts (Umunadi, 2011). In 1985 the Federal Ministry of Education, Science and Technology agreed to boost the academic learning performance in various institutions by offering infrastructural facilities sufficiently to the schools. Okoro (1991) noted that structures, including accessible facilities, equipment, resources and instructional materials, are inadequate for productive and successful use in institutions. The lack of infrastructural facilities is one of the main challenges in technology institutions in Nigeria. Oranu (1990) revealed that physical absence is the problem facing most learning institutions in Nigeria.

However, it is obvious that the low level of financial support provided by educator institutions, in particular those in Nigeria, makes it impossible, as outlined by the Federal Republic of Nigeria (FRN) in its National Policy on Education (NPE) (FRN, 2004), for infrastructural facilities to be provided adequately. It is also unambiguous that equipment cannot be properly built at schools' workshop without adequate funding. As a result, classrooms and Labs are not adequately designed for practical purposes as a way of supporting the students. Nigeria appears to be the key default to comply with guidelines from UNESCO that education will account for at least 26% of the national budget. The Federal Government Budget 2013 does not replicate any government obligation to improve educational sector fortunes. Taking account, instead, of the low budget allocation, which is around 5% higher than the budget of 2019. Such

allocations were not quite sufficient, as the institutions in most educational institutions in Nigeria had nothing to show in terms of good facilities and adequate maintenance of the existing facilities.

Educational Facilities

Infrastructure for education can be defined as houses, which include material and physical objects (IES 2007). IES 2007. School educational facilities are material tools which enhance the teaching and learning of the system. Education infrastructure can be described as houses that include physical and material objects (International Security Intervention 2007). The 2007 IES, schools are content instruments which enhance the system's teaching and learning. Education infrastructure can be described as houses that include physical and material objects (International Defense Activity 2007). The 2007 IES, school education services are material tools that facilitate the system's teaching and learning. They include the overall framework and the human and environmental resources needed to ensure the proper provision of professional education. In the school area, other important education facilities include textbooks, laboratory equipment, computing devices, power supplies, and other technological and professional educational facilities that are essential to delivering standard and quantitative education (Omotayo, 2008).

The availability, the adequacy, use and maintenance of educational facilities are a significant factor in high performing and regular learning institution. In Nigeria, enrollment in public schools continued to expand without commensurately increasing educational facilities for successful schooling and employment. The government has funded the provision of accessible school facilities in Nigeria as a result of under-financial assistance to education (Asiyai, 2012). Maintenance of institutions in classrooms means making sure that educational facilities are maintained as similar as possible to their original condition. It includes the maintenance of clean school activities and football fields, regular building upgrades, the restoration of school bus and power facilities, repairs etc, in order to restore educational infrastructure to an optimal operating state.In the academic environment school educational services are the core components of the elements of primary as well as indirect practices.

Several experiments have shown that the physical and learning climate of the learner have a close relationship. Obed (2019) and Olande (2018) concluded that the educational content obtained by children is directly related to the provision or lack of physical education facilities and overall learning environment. Schools consist of all types of buildings, infrastructure for educational and school events, sport and recreation fields, parks, gardens, open fields, including woodland, roads and trails, as well as non-academic services. Other facilities include retail furniture, childcare, illumination, audio, educational storage and packing facilities, defense, transport, ICTs, washing equipment, food services, and physically disabled people's special educational facilities.

Such training services play a crucial role in upgrading educative priorities and strategies by addressing the physical and mental needs of staff and school learners. The education sector has undergone immense improvements in the shape of its philosophy, specific goals and priorities, innovative approaches to service delivery and architectural design, a huge leap in school enrollment, numerous programming curricula and extracurricular activity, implementation of the ICT system and enhanced programs such as instruction for teaching and learning.

Fenker (2004) claimed that educational facilities administration is a factor that makes sure the building and other technological processes support the activities of an institution. The

International Educational facilities Management Association (2002) defined educational facilities management as the process of co - operation of the physical environment with the people and the work of the organization; it incorporates the concepts of business management, design and the behavioral and technological science. The administration of school education facilities is the use of analytical approaches to prepare, organize, take decisions, arrange and track the physical learning environment for updating instructional objectives. This includes taking opinions on the place for the establishment of new facilities, the planning and development, reconstruction and restoration of the existing plants, the procurement of the academic and non-academic infrastructure, the repair of all educational institutions and the review of management procedures and processes. This includes the introduction of a new school building.

School facilities in various types are available. The devices may be static or mobile and serve various educational purposes. These are seen in the schools, hospitals, offices, cafés, bathrooms, cleaning rooms, and libraries as well as in athletics and other uses. The tools are the components for various machines to work. For schools, offices, cafes, labs and libraries, parks, residence buildings, open spaces and others built for visually disabled people even accessible furniture. Education resources provide classroom management tools, building administration, inventory reviews, repair control, electronic ordering, food services and general administration. In order for the program to be implemented, the school administrators must have the requisite in-service training to allow full use of the program.

Educational structures are items meant for particular uses. There are various learning resources in the educational system, which promote teaching and learning. These are used to demonstrate topics, to provide first-hand experience, experiments and presentations, experimental study and exploration and to provide a wide variety of ideas. Indirect or instructional facilities such as classrooms, cafeteria, acoustics, and bathrooms, washing facilities, mowers, living areas, dining rooms, cleaning facilities and other related things meet the needs of the person. These are used in: improving the cleanliness and reliability of school facilities; reducing the running expense and the costs of construction life cycles; expanding the operation life of a facility; improving personnel productivity and efficacy and maximizing the quality of the building. In terms of standard and numbers, educational services available in most schools could well be rendered redundant. This was given because similar to the population of the same school actually using the same services, the student demographic of the school was comparatively small.

According to the study of the laboratories of the educational facilities; the adjectives used to classify these educational facilities are resistance, inaccessibility, formality, separation, intensity, immobility and permanence. Such schools do not meet today's standards any more. Flexibility has to be an important part of the preparation phase with the quantum leap into enrollment in the curriculum, expanded number of instructional programs and minimal resources.

Educational facilities should be set up in such a way that new services can be given in future. In the planning of educational facilities, Caudill (1954), stressed that, "more precise terms such as adjustable space that really can allow organized development, flexible space that can be economically adopted to modify the system, flexible that serves many useful and malleable spaces that can be modified at once and can be used at will." "Advocates collective activities of curriculum facilitators, managers, and capital budget consultants, school leaders, academic counselors, fiscal and school analysis personnel" to achieve these goals.

School Financing

No organization, without funds, will exist. It consists of all financial inputs for the realization of mapped-out targets in schools. Institutions in the economic world need capital to meet their needs. It relies on finance irrespective of an institution's orientation. Consequentially, finance is not only important to the execution of all economic activities, but is also essential. Finance is as old as existence on earth, the term was initially a French term 'finer,' meaning to pay extortion from the old French word 'fin' (end). We cannot visualize a world without finance at the present. This is the essence of our business operations.

Hornby (2001) described finance as money used to operate a business, an operation or a set project; money management operation, in particular a government or organization of the European Research Council; money available to an individual, organization or country in the manner in which that money is handled. We need other resources that are to be pooled in terms of money to conduct some task. Finance is the money received at the time it's required. This covers both the banking and financial services instruments. Finance can also be seen as revenue management, conducting or transacting money matters, particularly those that affect the public in general. A key element of finance is the time value of money, which states that one currency unit's purchasing power can differ over time. Finance is a prerequisite for acquiring physical resources that are required to attain goals and services. As stated in NOUN (n.d.), Ezra (1969) described finance as a collection of facts, principles and theories concerned with individuals, business firms, educational institutions, and government raising and using finance. This requires not only raising capital but also judicious distribution and careful management to achieve the aims of the organization.

No wonder, Ebong (2006) thought that any program's financial resources are the lubricants. In the same light, Kosemani (1995) claimed that finance plays a critical role in the growth of education, and that the absence of a buoyant economy can make a grandiose, well-thought-out and formulated educational policies and plans nonsense. The school administrators cannot fulfill their obligations without money.

In all organizations especially the educational industries, fund in its adequacy is always a challenge. However, the educational industry have over decades been faced with this challenge. This prompt authorities into searching for possible and workable alternatives to source for funds within and outside the community. Interventions by governments and mostly some finances donated by individuals and some organizations are usually not enough to combat the needs of the educational industries. However, the lack or inadequate provision of infrastructures and man power is due to low level of financing the educational industries and institutions, predominantly educational industries / institutions in Nigeria. This has hampered the rapid actualization of the goals of education that has been outlined by the Federal Republic of Nigeria (FRN) as seen in the National Policy on Education (NPE) (FRN, 2014).

Without adequate fund, schools and its laboratories cannot be equipped, workshops cannot be organized and this will detoloriate and hamper the practical aspect of instructional delivery. One of the countries that do not allocate enough or adequate funds to its educational system is Nigeria. Nigeria has constantly defaulted in complying with the UNESCO recommendations that at least 26% of the National budget must be committed to education. A sample of the recent Federal Government Budget does not reflect any commitment of any kind.

The place of finance cannot be overemphasized as it plays an important role as serves as a variable in the maximum realization of educational objectives. In an advanced economy,

finance is characterized as the arrangement of cash when it is required. Instructive monetary exercises comprise of income and use. It is important to note at this phase the issue of use of money is exceptionally pivotal to the conveyance of value instruction. Funds are vital for the setting up of infrastructural offices, for example, study hall squares, managerial squares, library, and research center squares. They are likewise required for the arrangement of school hardware and furniture, for example, work areas, tables, seats, typewriters, PCs, research center gear, synthetic concoctions, and writing supplies among others.

Money are likewise vital for the execution of instructive projects (instructional materials incorporate all types of data bearers that is utilized during the educating and learning procedure, for example, course books, graphs, maps, diaries, periodicals, banners, papers, magazines, models, pictures, sound and video tapes, globes, records, sheets and so on). Finance are significant for the setting up of instructive activities, for example, poultry ranches, fish ranches, and horticultural homesteads among others. These venture supplement and supplement existing instructive projects of a school. In particular, account are vital for the work and installment of staff. Without account, it would be troublesome or if not difficult to accommodate the government assistance of staff in the school. They are expected to design and sort out courses, meetings, conferences and workshops (Ogbonnaya, 2012). A definitive objective of a school can't be tended to or accomplished with first structuring a system to guarantee the best possible usage of money. It is imperative that most financing sources have their own desires for results, in this manner misappropriation of account will influences the association's notoriety and its capacity to achieve its strategic. Wastage of money brings about destinations not being met and at last misfortune. Subsequently, it is one thing to secure store and another to use the sourced account.

Financing represents an incredible test in the instructive part. From the national perspective, the appropriation of monetary assets for the training subsector is influenced by pressure from different areas for which there is by all accounts more prominent support with respect to the conveyance of money. Thus, the insufficiency of fund will surely have the impact of constraining instructive turn of events. School overseers must search for methods of financing their projects since the legislature can't enough reserve the projects. It isn't phenomenal for money related help to be given from more than one source. It is qualified to take note of that one wellspring of financing is profitable. A few sources give a support against antagonistic treatment by a solitary financing source. Ogbonanaya (2012), opined that the sources incorporate school expenses, government awards, continues from school exercises, network endeavors, gifts from the people and good cause associations, blessing account, outer money, oil trust store, graduated class and demands.

SCHOOL FINANCING FOR FACILITIES MAINTENANCE AND EFFECTIVE ADMINISTRATION

A part of school the executives that is commonly disregarded is keeping up school offices. At the point when new structures are manufactured and taken over by the best possible specialists, for all intents and purposes no consideration is paid to the upkeep of such structures. A few school structures that are more than fifty years of age have never experience any type of redesign or any type of modernization regardless of the adjustments in the instructive framework in light of the poor support culture in Nigerians. Office upkeep is an issue that worries all degrees of the instructive framework running from the pre-kindergarten to the tertiary levels. A portion of these

offices are structurally out of date and in this manner can't add to practical instruction. Keeping up the new structures, redesigning and modernizing the old ones require extensive mastery and responsibility of human and material assets. Changes in climate conditions and absence of support culture are answerable for the maturing and decay of school structures, grounds and gear.

School directors and educators who continually use school offices need information on offices support arranging. Therefore, they neglect to coordinate office support into the administration of the school. The issue of office upkeep is indiscriminately tended to at all degrees of the instructive framework. Fixes happen just when issues emerge because of separate of the current office. Office support involves giving perfect and safe condition to instructing and learning. It likewise includes arrangement of satisfactory offices for instructing and learning. This sort of support ought to be embraced in the office upkeep plan. These are preventive, everyday practice, crisis fixes, and prescient upkeep. School offices is portrayed as the site, the structures, the gear and all the basic structures, changeless and non-lasting structures just as such machines and research center hardware, the slate/blackboard required for effective instructing and learning. Fagori (2022) was of the view that first and foremost there was not at all like instructive offices; that there were no study halls and no work areas for students to sit or compose on, on the grounds that students were learning in an unconducive domain which influences the intellectual direction of the students.

Research indicated that Plato and Aristotle met with understudies to trade and discussion about thoughts in the outdoors and in any advantageous area maybe in the shade of a sanctuary or better despite everything divider. These days, these school offices are found in the school compound for viable instructing and adapting however how they are being overseen is an alternate ball game. This turns into a test to the school troughs overall to guarantee that they are all around kept up. Emenike and Ameno (2023) characterized school offices as the whole physical infrastructural offices gave in the school to the reason for instructing the youngster. The author included that when these parts of school offices is inadequate with regards to the outcome will be poor learning and poor portrayal in all circles of life.

Ojelede (1998) expressed that school offices involves the school site and all the structures that have been set up to help viable instructing and learning in the educational system. Moreover, Yusuf (2008) characterized school offices as space translation of the school Curriculum. It will be unimaginable for the educational plan to be executed if the physical offices required for instructing and learning are not accessible. Nonattendance of school offices makes encouraging insufficient and wanted learning won't occur. It gets important to guarantee that such plant is appropriately arranged and kept up to encourage the adequacy of educational system. The essayist communicates that in some state optional schools the study halls are jam stuffed with youngsters and, obviously, poor educating and learning shows itself. Instructors couldn't move around to give the students singular assistance where required on the grounds that there is no space in the middle of the seats in the study halls (Teaching Practice management experience).

In coordinated effort, Ajayi (2007) and Yusuf (2008) kept up that school facilities involve the apparatus which thusly incorporates machines and devices utilized in the workshop, notwithstanding copying machines. They likewise called attention to that school site, which is the scene on which the school's changeless and non-perpetual structures are manufactured, are a piece of school offices. They likewise included structures, gear, furniture, vehicles of different sorts, electrical fittings, and books, water flexibly foundation, and embellishments like play areas, yards, stops and homestead, as a major aspect of school offices. The essayist is loaning her assessment by saying that school offices is sweeping in the way that it includes each and every

thing beginning from the door of the school to the dividers covering the school compound. This ought to be brought into the ears of the younger students who didn't realize that the school ground and everything in it have a place with them and they should take great consideration of them.

One of the central methods of guaranteeing the ideal utility of accessible assets is through, support culture. Upkeep culture of any school talks much about such an organization. As per Akpan (2011) the outward presentation of school offices make up the premise whereupon individuals from the open pass their affirmations about the scholarly exhibition going on in the school. The present financial downturn being experienced world over has made it outright significant that the good news of support culture be lectured uproariously in our instruction industry. Having recognized the financial method of reasoning of modernization, a significant program of support and physical plant reestablishment is goal and need for upkeep is fundamental in light of the fact that unattended disintegration and disregard of schools structures could prompt higher out lays, as substitution lost. Schools can't manage the cost of this time of monetary hardship; consequently an upkeep culture ought to be received any place school premises are involved. Furthermore, support empowers us to pay less now, rather than holding on to pay more at a deferred point in time later on (Emenike, 2023) Hence, there is supreme requirement for the couple of accessible ones to be fittingly kept up for compelling and productive instructing and learning.

As per Ukeje et al. (1992), support of the plant is characterized as those exercises associated with keeping the structures, gear and environmental factors at their genuine or best state of fulfillment and productivity, either through fixes or substitution. In this accentuation on the significance of offices upkeep, Homar (2021) demonstrated that, support could be ordered into Emergency and Periodic. Crisis support is called for by the circumstance of occasions, and regions, for example, auxiliary issue, gear amendable to intermittent reviews, plumbing offices including sterile extras. Counting here likewise are: entryways, windows, louvers, broke dividers, spilling rooftop, and so on. Another sort of support is the strategy.

This worries offices which follow fixes and redesigning cycle. It could be in days, weeks, month to month or yearly. This sort of support is frequently practiced by replacement of new parts or materials for old and worn – out ones. It doesn't involve the replacement of totally new offices. This is once in a while called "preventive support". Preventive upkeep incorporates random occupations that are required to keep mechanical and electrical gear employable, the work of art of outside and inside surfaces, fix of entryways and windows, reflowing, fix of harm rooftops and roofs. The upkeep of these offices is gravely important so as to deflect enormous wastage or their all-out misfortune. Homar (2021) plainly puts it that the way to securing the venture of billions of Dollars focused on instructive offices each is appropriate arranging today and the promise to support and activities from there on.

The need of this support culture is briefly put by UNESCO (2004) upkeep programs must fulfill two destinations: The first and most costly is that of the counteraction and weakening of school structures furniture executed at foreordained interims in the life of each school and arrangements at each stage, and with explicit parts of the structure. The second, less expensive, however from multiple points of view progressively troublesome projects, is that to manage possibilities, such broken windows, the rooftop, which spills, and the channels that square and abruptly flood. From the prior, it has been clarified that appropriate upkeep culture is a monetary elective when contrasted and the money related ramifications when the couple of accessible assets are suspiciously permitted to rot. At the point when a school soaks up and acclimatizes the

way of life of support of the rare assets, the establishment gets appealing and is better prepared to convey the objectives. Uchendu (2011) referenced that appropriate administration of human and material assets upgrades educating and learning in auxiliary schools.

Various elements add to the "upkeep hole". They incorporate lacking finance, poor administration of finance, and home administration and arrangement that don't coordinate instructive needs. Poor support expands running costs, for example, for vitality and cleaning. Vitality use, for instance, can add up to more than 33% of premises–related use; diminishing vitality utilization can help not exclusively to set aside cash yet in addition to decrease carbon dioxide emanations and different types of contamination. Different outcomes of poor support are: decay of parts of the structure; a hazardous and unfortunate condition; a lower nature of educating and learning; a lower nature of living and vandalism. There are instructive, social and ecological focal points of good upkeep: instructively – the state of nature shows society's help for training; socially it sets a guide to students, which the earth wherein we live ought to be thought about naturally lastly, great support advances the points of instruction.

MAINTENANCE OF SCHOOL OFFICE FOR EFFECTIVE ADMINISTRATION

Offices Maintenance fixes what is broken and continues running what isn't broken. On the off chance that there are spills, squeaks, breaks, spray painting and weird commotions originating from storage rooms and housetops, offices upkeep will react to such issues. Support exercises incorporate keeping spaces, structures and foundation in legitimate working condition in a daily practice, booked, or foreseen design to forestall disappointment or potentially corruption. This incorporates balanced substitution of segments and frameworks not requiring proficient building or allowing. Support exercises don't include an adjustment in space arrangement or space use.

School heads of schools ought to think about the wellbeing of the students under their obligation care and one method of indicating this intrigue is keeping up of the school plant. The brains of staff and understudies ought to be set up by causing them to comprehend that they are one family and that the structures in the school premises have a place with them and it is their obligation to keep them in great condition after each utilization. School heads ought not to give out any piece of the school plant for business use since the clients are probably going to cause a few harms which will take a ton to fix.

The school supervisors should frame council to deal with school plant all the time and present a composed report to the school head. The people group partners, whenever drew closer, will take an interest in keeping up the school plant. Theft of properties on the school compound (for instance, government young ladies optional school, Rumuokuta a few years back) was found to have been finished by certain young men from that network whenever the school gets any new gear. The school chief chose to make a proper report to the partners who got the ball rolling and found the culprits and they caused their folks to supplant those things and fix the harms done to the foremost's office. That finished the theft case in that school for that period. The Parent-instructors Association likewise is a ground-breaking organ to use to guarantee that school plant is kept up consistently by making supports accessible. As we as a whole know, absence of assets causes postponement of any undertaking. At the point when assets are given, the gifted men/ladies ought to be utilized to get the ball rolling for results to be accomplished. School heads should make it known to class staff that no school property ought to be changed over to private property. This will definitely delay the life expectancy of the property. On the off chance that the school vehicle is utilized to do official obligation it will keep going for quite a while,

combined with customary adjusting. There ought to be occasional review and fixes of school plant to make instructing and learning advantageous.

As per the Center for Facilities Management (2010), offices the board is the procedure by which an affiliation conveys and continues bolster benefits in a greatness situation to address vital issues. It might likewise be characterized as "the procedure by which an association guarantees that its structures, frameworks and administrations bolster center tasks and procedures just as add to accomplishing its key goals in evolving conditions (Keith, 2009). Place for Facilities Management, (CFM, 2010) stress the need to concentrate assets on addressing client needs to help the key job of individuals in the associations parched endeavors to ceaselessly improve quality, decrease hazards and guarantee an incentive for cash. Offices the executives spread out an association's reaction to crucial issues, for example, space portion and charging, natural control and security, direct and contract work. Offices the board is applicable to all segments in created and immature and creating nations.

Facility executives are essential to the development and endurance of association, especially in the dynamic culture as our own (Dell, 2008). The adequacy and the proceeded with presence of association are to a great extent upgraded by the capacity of the executives to guarantee that there is utilitarian hardware, grounds and building, framework, installations and so forth. Ejiofor (2004) saw that organizations have lost their adequacy and profitability, due to poor offices the executives. He further clarified that poor mentality towards offices the board hamper business' activity. To him, the board works underneath limit because of offices the executives.

Offices will in general abatement in esteem when they are given and placed into utilization. In this manner, there is requirement for support through fix and overhauling of segments so as to reestablish their state of being and continue their working limit. Support improves execution and strength. It likewise forestalls wastages. There are preventive, remedial, breakdown and shutdown support administrations (Adeboyeje, 2000). Preventive upkeep happens normally by checking and reviewing the accessible offices and taking required measures to forestall breaking down or non-working of a demanding facility. Counteraction isn't just better: it is additionally less expensive than some other measures; it is ' proactive in nature. Remedial upkeep includes reactivation or substitution of offices so as to standardize their exhibitions. At the point when a Facility or gear separates totally, a significant fix or substitution might be required. There might be the point at which the foundation may need to shut down so as to permit a significant fix to be done. Flood, fire or wind catastrophe may warrant conclusion of an organization for a significant fix to be affected.

SCHOOL FINANCING FOR MAINTENANCE OF SCHOOL OFFICES AND EFFECTIVE ADMINISTRATION

Danole (2020) portrayed school offices as the keeping of school site, building and very vital gear in as close to their original condition of utility as could reasonably be expected. The author keeps up that assignments should be aggregate in our foundations of learning and each individual should bear the results exuding from absence of care of his own errand. Scholarly staff utilizes the plant while managing their obligations. The non-scholastic staffs deal with these offices and gear. They ought to arrange arbitrary check now and again to direct in great time whatever may thwart powerful educating and learning. In some tertiary foundations, the works office staff play nonchalant demeanor when they are educated about the terrible condition of these plant. On the

off chance that these objections are gone to in great time, there would be smooth running of an establishment; in any case, instructing and learning may be influenced radically.

In some Nigerian schools, Rivers State as perspective, there are laxities with respect to the support of school offices. A few educators couldn't care less how the circumstance is; regardless of whether these plants are in acceptable condition or not. They come to class, play out their obligations and leave by the day's end. Some of them grumble that they have composed a report to the service specialists however nothing has occurred. For instance, if there is no light in the study halls, fans won't be working; the instructors and the trained will perspire; evening addresses/private perusing won't be accomplished on the grounds that the entire spot will be uninformed and sweltering. There are hordes of models yet the most significant message is that fixes ought to be done at the ideal time to spare expenses and make instructive objectives and targets reachable.

Also, Oluchukwu (1998) underscored that considering the colossal expense of purchasing of new material; support culture ought to be maintained in schools or be made a fundamental concern. At the point when school offices are dealt with, they keep going long along these lines sparing expenses for the administration and different NGOs. All hands must be at hand in keeping up school offices which includes keeping of grounds, structures and hardware in their interesting state of culmination or proficiency. Ajayi (2007) opined that school offices upkeep are for the most part exercises left upon with the end goal of supporting starting use estimation of the school offices. This includes clearing of the floors, environmental factors, cleaning, wiping, scouring, etc. Kenezevich (1975) was of the view that the time it takes for a structure to become out of date and bygone is an element of the nature of the first development and material just as the nature of housekeeping and support.

WAYS TO MAINTAIN SCHOOL FACILITIES

Ogunu (2000), Taiwo (2000) and Sani (2007) listed out the types of approaches in maintaining school facilities which are:

- Situational Maintenance Approach: This has to do with the amount realized after charging the public for making use of their school facilities. The money realized is usually used for the regular maintenance of these school facilities.
- Committee Maintenance Approach: This centres on giving maintenance responsibility to a constituted works committee comprising of teachers, students and supporting staff. The committee is in charge of fund raising, receiving complaints on damaged facilities, organising direct labour, collecting data and data on condition of school plant. School administrators need to delegate authority and provide necessary support to enable the committee to function effectively. The approach also helps to ensure collective responsibility.
- Community Participating Maintenance Approach: at this stage, community based expertise or technocrats in area of carpenters, plumbers, mechanics, professional brick layers can mutually join with the school authorities to maintain school facilities.

CONCLUSION

Education is a critical sector for national development, and its sustainability depends largely on adequate financing. In secondary schools, financial resources are essential for the maintenance of educational facilities and the smooth administration of institutions. However, in Rivers State, Nigeria, challenges such as inadequate funding, poor financial management, and delays in disbursement of allocated funds have hindered the effective maintenance of school facilities and administration. School financing refers to the process of generating, allocating, and utilizing financial resources for the operation and development of schools. In Nigeria, secondary school funding is derived from multiple sources, including government allocations, donor support, community contributions, and internally generated revenue (IGR). Effective financing ensures the availability of resources for school infrastructure, staff salaries, instructional materials, and administrative functions.

Suggestions

In light of the above discussions of this paper, coming up next are suggested:

- The government should allocate a higher percentage of the annual budget to education, ensuring sufficient funds for school maintenance and administration.
- Schools should adopt preventive maintenance schedules to reduce long-term costs and improve the durability of school facilities.
- Government agencies responsible for education financing should ensure that allocated funds are disbursed on time to prevent disruptions in school operations.
- The government should encourage private sector involvement in financing school infrastructure through corporate social responsibility (CSR) initiatives, sponsorships, and grants.
- Schools should implement strict financial management practices to prevent misappropriation of funds and ensure effective utilization of resources.
- Secondary schools should explore alternative funding sources such as alumni contributions, community support, fundraising events, and income-generating activities.

PROVISION AND UTILIZATION OF PHYSICAL RESOURCES FOR EFFECTIVE TEACHING AND LEARNING EFFECTIVENESS IN PUBLIC UNIVERSITIES

Ijeoma Grace WIZOR
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

This paper investigated provision and utilization of physical resources for effective teaching and learning in public universities in Rivers State. The efficacy of teaching and learning in public universities is closely tied to the provision and utilization of physical resources. Educational managers must carefully and effectively handle educational resources including money, machines like computers, teaching technology, internet facilities, and other facilities to ensure the effective realisation of educational goals, and it is pertinent to state that management is a panacea for producing quality graduates in the university system. The theory that guided this paper was anchored on The Resource-Based Theory (RBT) propounded by Wernerfelt (1984), which states that organizations, including educational institutions, can achieve a sustainable competitive advantage through the strategic and utilization of physical resources. The relevance of the Resource-Based Theory to the study at hand is evident in its emphasis on how tangible assets, when properly harnessed, can be a source of sustainable advantage. The study concluded that the effective provision and utilization of physical resources are paramount to the success of teaching and learning in public universities in Rivers State. The multifaceted approach outlined in this study encompasses infrastructure development, technological integration, library enrichment, and considerations for accommodation, among other critical factors. By systematically addressing these elements, universities can create an environment conducive to academic excellence, fostering a holistic learning experience. It suggested among others that State government should establish mechanisms to improve transparency and accountability in the use of physical resources to ensure that funds are directed efficiently and effectively towards educational priorities.

Keywords: Provision, Utilization, Physical Resources, Effective Teaching, Learning Effectiveness, Public Universities, Rivers State.

INTRODUCTION

The basis for establishing a setting in which physical resources are not only made available but also effectively employed to improve the quality of education as a whole is education. The fundamental purpose of education is to create an environment that is favourable to the development of the mind. This goes beyond the conventional classroom environment and

includes offering well-appointed places like libraries, labs, and leisure areas. By means of instruction, educational establishments can foster in learners a sense of accountability and responsibility, motivating them to actively engage in the upkeep and efficient use of these assets. By enabling teachers and students to take advantage of technology, education makes it possible to ensure that classrooms are furnished with cutting-edge physical resources for interactive instruction. Information and communication technology (ICT) integration is not just a fad; rather, it is a calculated way to optimise resource use, enabling smooth communication and easy access to a multitude of scholarly resources.

Okai and Bright (2004), education is the process by which learners are assimilated into society and taught to comprehend or understand the happenings in their surroundings. Adeyemi and Adu (2010), education include a number of procedures that people go through to help them reach and utilise their potential, it is commonly acknowledged that it is one of the most effective tools for fostering societal development. Additionally, Okeke (2007) made the argument that education helps people develop the information, abilities, and attitudes needed to live well. For this reason, physical resources allocated to education is regarded as being extremely important in all nations of the world. This is the rationale behind the significance of education and the reason major stakeholders call for the increase in funding education from 8.2% to the UNESCO benchmark of 25% (Thecable.ng/matters-arising 2023). Education is indeed becoming a very big business in Nigeria and this business aspect of providing adequate physical resources, particularly buildings, should now become a serious element for effective management of university education, (Ukeje et al. in Ezeugbor & Okorji (2014).

Public universities in Rivers State rely heavily on the efficient availability and use of physical resources to create an atmosphere that is favourable to teaching and learning. University institutions require a wide variety of physical resources, including but not limited to chairs, classrooms, administrative blocks, student hostels, office accommodation, library, laboratory, internet facilities, football fields, desks, chalkboards, instructional materials, and more. Both students and teachers benefit greatly from the synergy between these factors, which enhances the quality of the educational experience as a whole.

Physical resources refer to the tangible assets and facilities utilized in the teaching and learning process. These encompass a wide range of items, including classrooms, laboratories, libraries, technological infrastructure, and recreational spaces (Okonkwo, 2017). These physical resources play a crucial role in creating an environment conducive to effective education delivery and student engagement. The provision and utilization of physical resources are fundamental to the overall effectiveness of teaching and learning in educational institutions (Okafor & Ibrahim, 2019; Ololube, 2024). Adequate classrooms and well-equipped laboratories enhance the quality of educational experiences, facilitating hands-on learning and experimentation (Adeyemi, 2020). Additionally, a well-stocked library and advanced technological infrastructure contribute to the overall academic development of students (Nwosu 2018).

The provision and utilization of physical resources in education encompass the processes of making available and effectively employing tangible assets to create an environment conducive to learning (Okafor, 2018). These physical resources, including classrooms, laboratories, libraries, and technological infrastructure, play a crucial role in facilitating effective teaching and learning experiences for students (Adewale, 2020).

The availability of classrooms is fundamental to accommodating students and providing a space for interactive teaching methods (Ibrahim, 2019). Well-equipped laboratories contribute

significantly to hands-on learning experiences and the development of practical skills among students (Adeyemi, 2021). Additionally, libraries, serving as knowledge hubs, and up-to-date technological tools enhance the accessibility of diverse learning physical resources and support modern teaching methods (Nwosu, 2017). Classrooms, lecture halls, and laboratories, as well as their accessibility and condition, are critical to the success of any educational institution. Spaces that are well-planned and supplied encourage academic curiosity and active participation. Modern, well-maintained lab facilities are especially important for providing students with hands-on learning opportunities in the STEM fields. In today's information-rich world, up-to-date educational resources and tools are crucial. All of the public institutions in Rivers State need to have modern audio-visual equipment, computers, and other technological resources to help students learn more effectively. Furthermore, it is essential for laboratories and research centres to have cutting-edge equipment in order to remain competitive in a variety of academic subjects. Libraries are the core of academic institutions, allowing students and teachers access to a plethora of knowledge. A university's dedication to fostering research and intellectual endeavours can be gauged by the breadth and depth of its collection of print and digital resources (books, journals, and databases). Library resources, such as quiet study areas and group study rooms, and research resources, enhance the learning environment.

The availability of qualified instructors and staff is just as important as having adequate facilities when it comes to ensuring high-quality education. Staff of the universities should participate in ongoing professional development to create a more stimulating and innovative learning environment. It is crucial to know the difficulties and possibilities that create the educational environment to have an understanding of the current status of physical resources in public universities in Rivers status. The quality of education offered by these establishments can be improved by delving further into the specifics of these physical resources in order to locate problem areas, develop solutions, and execute them strategically.

It is likely that poor learning results and the lecturers' production will result from a lack of these tools, upsetting the learning process and making it impossible for such institutions to reach their stated aims. The topic of utilisation arises, however, in many institutions, particularly in Rivers State, where such physical resources are made available. Institutions of higher education in Rivers State are tasked with improving the quality of education available in the state through the provision of sufficient material resources. However, most of Nigeria's educational institutions suffer from outdated and insufficient infrastructure, making it difficult to offer students with a high-quality education. Most of these physical resources will only be useful if they are put to good use in the classroom.

According to Paterson (2009), universities and their students benefit greatly from the efficient use of their physical resources, such as classrooms, laboratories, libraries, assembly grounds, flower gardens, school gardens, volleyball courts, chalkboards, desks, chairs, and so on. Only efficient use of material means can achieve this goal. In certain institutions, the limited physical resources that are offered are old and not properly installed due to lack of fund. Even when these materials are made available, some teachers may lack the expertise to effectively integrate them into the classroom. There is a problem at some of these schools where instructors do not make use of cutting-edge tools because they do not know how to operate them. All of these factors significantly affect the program's final results. In addition, if they are used excessively, they may break down quickly due to wear and tear from overwork. According to Okai (2008), the university system is a key that unlocks the door to civilization and growth since it is one of the agents that determine the destiny of man and that of the nation. In fact, the

university system's vital role in development necessitates careful planning, the supply of sufficient physical resources, and efficient use of those physical resources in order to guarantee high-quality education for university students. In the context of this research, "teaching" is guiding another individual or a group of individuals through the process of learning something new. It goes without saying that if the necessary physical resources are made available and used, the university will be successful. That means the success of any institution, the university included, is proportional to the means by which they are supported and utilised.

Physical resources management and utilisation, as defined by Okai (2013), is the proper directing of an organization's people and material assets towards the achievement of its goals. In this sense, physical resources provision and utilisation is the effective coordination of the physical resources made available to the university for the objective of creating quality graduates. Educators in the university system conduct study and write articles and papers that provide answers to the problems facing the country. Good educational managers must carefully and effectively handle educational resources including money, machines like computers, teaching technology, internet facilities, and other facilities to ensure the effective realisation of educational goals, and it is pertinent to state that management is a panacea for producing quality graduates in the university system.

Despite their importance, public universities often face challenges in managing and maintaining physical resources (Abubakar & Smith, 2021). Insufficient funding, inadequate maintenance, and outdated infrastructure can hinder the optimal use of these physical resources (Turner, 2016). These challenges underscore the need for effective management strategies to ensure the sustainable provision and utilization of physical resources in Nigerian public universities. It is against this background that this researched the provision and utilization of physical resources for effective teaching and learning effectiveness in public universities in Rivers State its usage and its provision.

THEORETICAL FRAMEWORK

Resource-Based Theory (RBT)

The Resource-Based Theory (RBT) was propounded by Wernerfelt (1984). The theory posits that organizations, including educational institutions, can achieve a sustainable competitive advantage through the strategic utilization of physical resources. physical resources encompass a wide range of tangible assets, such as classrooms, laboratories, libraries, and other infrastructural facilities. According to RBT, the availability and efficient use of these physical resources contribute significantly to the overall competitiveness and effectiveness of an organization. This theoretical review sets the stage for a comprehensive exploration of the dynamics surrounding the provision and utilization of physical resources for effective teaching and learning in public universities in Rivers State. By drawing on the Resource-Based Theory, the study aims to unravel the intricate relationships between tangible assets, institutional frameworks, and educational outcomes, ultimately contributing to the enhancement of the overall educational landscape in the region.

The relevance of the Resource-Based Theory to the study at hand is evident in its emphasis on how tangible assets, when properly harnessed, can be a source of sustainable advantage. In the educational landscape, the provision of state-of-the-art facilities and their effective utilization can enhance the quality of teaching and learning experiences. For instance,

well-equipped laboratories facilitate hands-on practical sessions, fostering a more comprehensive understanding of theoretical concepts. Similarly, modern classrooms and libraries create a conducive environment that promotes active engagement and knowledge acquisition.

CONCEPTUAL REVIEW

Physical resources

Resource is productive assets available for different uses for the achievement of national goals. It is the sum total of organization's assets in human, material or financial form which the organization is willing to release for the realization of its goals. physical resources are what enable people to turn goals into reality. physical resources are most times not sufficient and it is in such situation that the available physical resources need to be properly managed to maximally attain educational goals. These physical resources pushed into the university system are highly justified because of the input a university makes in the lifting of the social and economic system of her country or immediate community. This is attested in Ajayi and Ekundayo (2006) that the funds allocated to higher education should not merely be considered as an expense but a long-term investment, of benefit to society as a whole.

Okai (2003) in Okai and Worlu (2008), states that resource in higher education refers to the totality of fund to higher education which the higher education system needs for its smooth running and survival. This is the apportioning or distributing of productive assets to sectors for different uses for the achievement of national goals. The resource model (RAM) is defined as a means by which available physical resources are used judiciously to achieve the objectives of an institution to a high level of satisfaction.

The federal and state government allocate fund to their respective universities every year. Also the 2% tax on profits by registered limited liability companies in Nigeria in accordance with the Tax Decree No. 7 of 1993 is allocated to higher, primary and secondary educational levels in the ratio 504010. The 50 ratio is then shared in the ratio of 211 to universities, polytechnics and colleges of education respectively. Other outlets fund the university system on areas of research in form of scholarship. It is lamentable that there is growing shortage of funds and learning physical resources in the university system.

According to Oyeneye (2006) and Adegbite (2007), the major challenge facing the management of university system in Nigeria is inadequate funding meanwhile, Ajayi and Ayodele (2004) argued that there was an increase in the proportion of total expenditure devoted to education, but this has been considered to be rather grossly inadequate considering the phenomenon increase in student enrolment and increasing cost, which has been aggravated by inflation. This claim is backed up with Micaiah (2022) findings that total budget from 1999 to 2022 is 35.133 Trillion with the of 3.128 Trillion to education giving 8.28% of the total budget.

When the university system receives its, there is further disbursement to different sectors of the university. This disbursement is done following two main approaches the central or decentralized form of disbursement. University exercise is central when the highest administrator disburses fund as the need arises from the different departments or quarters. The department writes stating their need per time and the administrator checks and signs approval giving the bursary the authority to disburse fund to meet that particular need.

Utilization of Physical resources

The effective facilitation of teaching and learning in public universities in Rivers State, Nigeria, is intricately tied to the meticulous management and utilization of physical resources. These physical resources, as defined by Akindele and Olatunji (2015), encompass a diverse array of elements ranging from infrastructure and facilities to various types of equipment. Together, these components collaboratively contribute to establishing a conducive and productive learning environment. Central to the effective utilization of physical resources is the imperative of having access to and maintaining high-quality infrastructure and facilities, a point emphasized by Dele and Ede (2017). Well-equipped classrooms, state-of-the-art laboratories, adequately stocked libraries, and other essential amenities play a pivotal role in creating an atmosphere conducive to effective teaching and learning experiences. The environment directly influences the quality of education imparted, making the provision and maintenance of these physical resources paramount in achieving educational goals. In addition to the traditional elements of infrastructure, the integration of technology emerges as a critical factor in optimizing physical resources for enhanced educational outcomes. Ogunnaike and Adeleke (2013) stress the strategic use of information and communication technology (ICT) tools. This strategic integration not only provides students with broader access to information but also fosters interactive and engaging learning opportunities. In an era where technology is rapidly advancing, its incorporation into the educational landscape becomes imperative for staying relevant and effective.

Beyond structures and technology, the efficient utilization of physical resources extends to human capital. Onuoha and Eze (2018) draw attention to the significance of investing in the professional development and training of teaching staff. Adequate training ensures that educators are well-equipped with the necessary skills and knowledge to make optimal use of the available physical resources. The synergy between human physical resources and physical resources is vital in creating an environment where teaching and learning are not only effective but also adaptive to evolving educational paradigms. The concept of the utilization of physical resources in public universities in Rivers State is a multifaceted endeavor. It encompasses not only the provision and maintenance of infrastructure but also the strategic integration of technology and the development of human physical resources. A comprehensive and strategic approach to managing these physical resources is indispensable for fostering effective teaching and learning experiences in the academic setting, this holistic perspective acknowledges the interconnectedness of various elements and underscores the importance of a cohesive strategy for the optimal utilization of physical resources in the pursuit of educational excellence.

Adequacy of Physical Resources as Determinants of Effective Teaching and Learning

The adequacy of physical resources is pivotal in determining the effectiveness of teaching and learning in Nigerian universities (Ogunjimi, 2019). Adequate physical resources encompass well-equipped classrooms, laboratories, libraries, and technological infrastructure, which collectively contribute to a conducive learning environment (Adeyemi, 2020). Adequate classrooms are essential for accommodating students comfortably and facilitating interactive teaching methods

Well-equipped laboratories play a crucial role in enhancing practical learning experiences, fostering hands-on skills, and promoting scientific inquiry (Ibrahim, 2021). Ibrahim's study emphasizes the positive correlation between well-equipped laboratories and improved academic performance (Ibrahim, 2021).

Libraries and advanced technological infrastructure contribute significantly to academic development (Okafor, 2017). According to Okafor, a well-stocked library provides students with access to diverse learning resources, while up-to-date technological tools enhance the delivery of content and collaborative learning (Okafor, 2017). The adequacy of physical resource is a crucial determinant of effective teaching and learning in Nigerian universities. Ensuring sufficient and well-maintained classrooms, laboratories, libraries, and technological infrastructure is imperative for creating an environment conducive to quality education

Utilization and Management of Physical Resources for Effective Teaching and Learning

The utilization and effective management of physical resources in education are crucial elements in ensuring a conducive and productive learning environment (Okafor, 2018). These physical resources encompass tangible assets such as classrooms, laboratories, libraries, and technological infrastructure, all of which play vital roles in supporting teaching and learning processes. In the context of classroom utilization, scholars emphasize the importance of strategic planning and coordination to optimize the use of available spaces (Adeyemi, 2019). Adeyemi's research underscores that effective scheduling and thoughtful allocation contribute to efficient resource utilization, accommodating diverse courses and student cohorts. Regular maintenance of laboratories is equally vital for sustaining a safe and functional environment for practical learning experiences (Ibrahim, 2020). Ibrahim highlights the proactive upkeep of equipment to prevent breakdowns, ensuring that laboratories remain conducive to hands-on learning.

In the realm of library resource management, Nwosu's research emphasizes the significance of well-organized libraries that cater to the varied academic needs of students (Nwosu, 2017). Efficient library management involves curating diverse collections, ensuring accessibility, and providing a supportive space for research and study. Technology integration into teaching methods requires meticulous management of technological infrastructure (Adewale, 2021). Adewale argues that institutions must invest in the proper maintenance of technological resources to support modern teaching approaches and keep pace with advancements in educational technology.

Strategic budgeting and resource allocation are essential aspects of effective resource management (Abubakar, 2022). Abubakar's research indicates that transparent and efficient budgeting processes ensure funds are appropriately allocated for the maintenance and improvement of physical resources. Sustainability practices in resource management have gained importance, with scholars like Smith advocating for eco-friendly strategies (Smith, 2019). Integrating sustainable practices not only aligns with global environmental efforts but also contributes to long-term cost savings. The effective utilization and management of physical resources require a holistic and strategic approach. This involves optimizing classroom spaces, maintaining laboratories, managing library resources, integrating technology, implementing budgetary considerations, and incorporating sustainable practices. Regular assessment and adaptation of management strategies are essential to meet the evolving needs of educational environments (Okafor, 2018).

Instructional Materials for Effective Teaching and learning

The importance of Instructional Materials in any teaching/learning process cannot be over emphasized. This is for the fact that such materials enhance, facilitate and make teaching and learning easy, lively and concrete. Instructional Materials as the name suggests, are materials of visual, audio and audio - visual category that helps to make concepts abstracts and ideas concrete in the teaching/learning process. They are also materials which the teacher uses in supplementing teaching. Instructional Materials include materials used to facilitate learning for better results. Likewise, it is the use of the chalkboard, charts, models, overhead projectors, film, television and computers in teaching process. Hence, it is not just the use of tools of technology alone but a systematic, integrated organization of machines hardware's and software's and man, etc. to the solution of problems in education.

Instructional material as devices which present a complete body of information and largely self-supporting rather than supplementary in the teaching-learning process. These definitions by implication mean that the pupil or learner who has access to media capable of presenting information can learn a concept without requiring the services of a teacher. This explains the emphasis that every instructional material should be well prepared and should be as real as possible. It. should however, be noted that however good instructional material may be in terms of production, it requires the skill of the teacher to use it to make teaching-learning more effective, quicker and enjoyable.

In order to ensure an effective teaching learning process, it is important for the teacher to be thoroughly acquainted with the teaching resources and services available to him. The components of instructional materials available to teachers and students are in large numbers and also vary according to the functions of each of them. Pictures (motion and still) graphics, maps, radio - recording and play back and the equipment used to get some of these utilized can be regarded as the components of Audio Visual Aids, or Instructional Aids. Examples of instructional materials are charts, maps, diagrams, comics, models, globes, slides, film, television, radio cassettes, video, recorders, cinema, public address system, laboratories and flash Cards, flannel boards, card boards, Calendar, Computers, etc.

Infrastructures for Effective Teaching and Learning

The purpose of teaching and learning process is to bring about desirable change in the learner's behavior through critical thinking. The process does not take place in a vacuum but rather in an environment structured to facilitate learning. In ideal situation for teaching and learning to take place, there must be adequate infrastructure. Consequently, provision of instructional materials has impact on student learning achievement in educational system. School facilities consist of all types of buildings for academic and non-academic activities; equipment for academic and non-academic activities, areas for sports and games, landscape, farms and gardens including trees, roads and paths. Others include furniture and toilet facilities, lighting, acoustics, storage facilities, parking lot, security, transportation, ICT, cleaning materials, food services, and special facilities for the challenge persons. Researchers have shown that non-availability and inadequacy of such facilities have great influence on the performance of both students and lecturers in higher institution of learning. The facilities can be categorized into and non- facilities. Omoniyi and

Ogunsanmi (2012) posited that, university lectures are expected to perform at high level in the area of curriculum without the adequate basic facilities for teaching. learning and research which the use of classroom, laboratory, library, office space and ICT facilities are used for effective teaching and learning as will be explained further;

Classrooms

Classrooms, as integral infrastructures for effective teaching and learning, provide the physical space where educational activities unfold (Anderson, 2019). The design and layout of a classroom significantly influence the dynamics of instruction and student engagement (Miller, 2017). In a well-equipped classroom, students have access to essential tools and resources that enhance their learning experience (Clark & Davis, 2020). The physical arrangement of desks and seating plays a crucial role in classroom management and student interaction (Miller, 2017). According to Anderson (2019), a flexible seating arrangement can foster collaboration and group activities, promoting a more interactive learning environment. Furthermore, classrooms equipped with modern teaching aids, such as interactive whiteboards or smartboards, have been shown to enhance teacher-student interaction and make lessons more engaging (Eke, 2020).

In addition to furniture and technology, the overall atmosphere of the classroom contributes to effective learning. Adequate lighting, ventilation, and acoustics are key factors in creating a comfortable and conducive space for both teachers and students (Miller, 2017). Research indicates that well-designed classrooms positively impact student behavior, attention, and overall academic performance (Ede 2019). Moreover, classrooms serve as a platform for the implementation of innovative teaching methods. Educators can utilize the physical space to incorporate active learning strategies, collaborative projects, and interactive discussions, fostering a dynamic and participatory learning experience (Clark & Davis, 2020). The classroom, therefore, becomes not only a physical setting but a pedagogical space that shapes the educational journey of students.

Classrooms, as essential infrastructures for effective teaching and learning, go beyond mere physical spaces. They encompass the arrangement of furniture, incorporation of technology, and creation of an atmosphere conducive to learning. Recognizing the impact of well-designed classrooms on student engagement and academic performance emphasizes the importance of investing in and optimizing these educational spaces.

Laboratory

Laboratory classrooms, integral infrastructures for effective teaching and learning, provide a specialized environment where hands-on and experiential learning can take place (Okafor, 2018). These spaces are designed to facilitate practical applications of theoretical concepts, fostering a deeper understanding of subject matter (Eze, 2019). In a well-equipped laboratory classroom, students gain access to specialized equipment and resources that enable them to engage in scientific experiments and investigations (Nwachukwu & Okonkwo, 2020). The physical layout and organization of a laboratory classroom are critical for optimizing the learning experience. Adequate space, proper storage for equipment, and clear safety protocols contribute to a conducive learning environment (Okafor, 2018). Eze (2019) emphasizes the importance of well-maintained laboratory spaces to ensure the safe and efficient conduct of experiments, which, in turn, enhances the overall effectiveness of teaching and learning.

Furthermore, laboratory classrooms serve as platforms for collaborative learning and group experiments. Nwachukwu and Okonkwo (2020) argue that the interactive nature of laboratory work promotes teamwork, critical thinking, and problem-solving skills among students. The practical application of theoretical knowledge in a laboratory setting encourages students to connect theory with real-world scenarios, deepening their comprehension of subject matter (Eze, 2019).

In addition to the physical aspects, the role of skilled educators is crucial in laboratory classrooms. Okafor (2018) highlights the significance of trained instructors who guide students in conducting experiments, interpreting results, and fostering a scientific mindset. The synergy between well-equipped laboratories and competent educators enhances the educational experience and contributes to the development of scientific skills among students. Laboratory classrooms are essential infrastructures for effective teaching and learning in Nigeria. These spaces, equipped with specialized tools and resources, facilitate hands-on learning, collaborative exploration, and the practical application of theoretical knowledge. Recognizing the importance of well-designed and well-maintained laboratory classrooms emphasizes the need for investment in these educational spaces to enhance the overall quality of science education in Nigeria.

Library

Library classrooms, as essential infrastructures for effective teaching and learning, offer a unique educational setting that extends beyond traditional classrooms (Adeyemi, 2017). These spaces within the library environment provide opportunities for interactive and collaborative learning experiences (Ogunlesi, 2018). In a well-designed library classroom, students not only have access to a vast array of academic resources but also benefit from a conducive atmosphere that fosters research, critical thinking, and information literacy skills (Omotade, 2019). The physical layout and resources in library classrooms contribute significantly to the learning environment. Adeyemi (2017) emphasizes that the arrangement of comfortable seating, access to books, and multimedia resources enhances the overall educational experience. The library setting encourages students to explore diverse information sources, promoting a culture of self-directed learning and inquiry-based education (Ogunlesi, 2018).

Furthermore, library classrooms serve as spaces for information literacy instruction. Librarians play a pivotal role in guiding students on effective research strategies, source evaluation, and the ethical use of information (Omotade, 2019). This integration of library instruction into the academic curriculum supports students in developing critical research and information literacy skills essential for academic success and lifelong learning. In addition to physical resources, the collaborative nature of library classrooms supports group projects and discussions. Adeyemi (2017) notes that library classrooms offer a quiet and focused environment conducive to collaborative learning, allowing students to engage in group activities, share insights, and collectively deepen their understanding of course materials. This collaborative aspect fosters a sense of community and intellectual exchange among students.

Library classrooms serve as integral infrastructures for effective teaching and learning, providing access to a wealth of resources and fostering an environment that encourages independent research and collaborative learning (Adeyemi, 2017; Ogunlesi, 2018; Omotade, 2019). The integration of library spaces into the educational landscape underscores the importance of information literacy and research skills in preparing students for academic success and lifelong learning.

Office Space

Office spaces, serving as integral infrastructures for effective teaching and learning, play a crucial role in providing a dedicated environment for educators to engage with students outside the traditional classroom setting (Okoro, 2016). These spaces serve as hubs for academic support, mentorship, and individualized instruction, allowing for personalized interactions between students and instructors (Okeke, 2018). In a well-designed office space, educators can offer guidance, address students' concerns, and provide additional explanations to enhance understanding (Adewale, 2019). The physical layout and accessibility of office spaces contribute significantly to their effectiveness. Okoro (2016) underscores the importance of a welcoming and comfortable environment, conducive to open communication and student-teacher rapport. Well-organized office spaces equipped with necessary resources, such as reference materials and technology, enable educators to offer timely and comprehensive assistance to students (Okeke, 2018).

Office spaces serve as venues for academic advisement, where educators can provide guidance on course selection, career planning, and academic goals (Adewale, 2019). This personalized approach fosters a supportive learning environment and helps students navigate their academic journey effectively. Additionally, the availability of office hours allows students to seek clarification on class materials, discuss assignments, and receive feedback on their academic progress (Okoro, 2016). Furthermore, office spaces contribute to a sense of accessibility and approachability of educators, promoting a positive and collaborative learning culture. Okeke (2018) suggests that these spaces act as a bridge between formal classroom settings and informal, one-on-one interactions, creating opportunities for meaningful discussions that cater to individual student needs.

Office spaces are vital infrastructures for effective teaching and learning, providing a dedicated environment for personalized interactions, academic advisement, and individualized support. The physical layout and resources within these spaces contribute to creating an environment that fosters positive student-teacher relationships and supports students in their academic journey.

Government Policies on Provision of Physical Resources

Education plays a pivotal role in the development of any region, and effective physical resources is crucial to ensure quality learning outcomes. This literature review examines the existing government policies in Rivers State concerning education and the subsequent of physical resources to public universities. Government policies play a significant role in shaping the educational landscape in Rivers State. The "Education Act of Rivers State" (Okoroma 2018) outlines the legal framework governing education in the state. This policy emphasizes the importance of equal access to education and sets the foundation for resource distribution across educational institutions.

The resource framework in Rivers State is guided by the "Rivers State Educational Resource Policy" (Kikpoye 2013), which outlines the criteria and processes for distributing physical resources among public universities. This policy takes into account factors such as student enrollment, academic performance, and infrastructure needs. Despite the existence of

resource policies, challenges persist. Studies (Eme 2011) have highlighted issues such as bureaucratic hurdles, corruption, and political interference that hinder the effective implementation of these policies. These challenges impact the equitable distribution of physical resources among universities. The use of physical resources significantly influences academic outcomes in public universities. Adequate funding, as stipulated in the "Higher Education Financing Act" (Okoroma 2018), has been linked to improved infrastructure, faculty development, and overall educational quality. Conversely, insufficient negatively affects the learning environment and student performance.

Recognizing the challenges in resource, the government of Rivers State has introduced various interventions. The "Education Enhancement Program" (NPE 2015) is one such initiative aimed at addressing infrastructural deficiencies and enhancing the overall quality of education in public universities. Government policies in Rivers State play a critical role in shaping education and resource. Despite existing frameworks, challenges persist, impacting the equitable distribution of physical resources and subsequently affecting academic outcomes. The effectiveness of these policies requires ongoing scrutiny, and future research should focus on assessing the long-term impact of government interventions on education in Rivers State.

Technology Integration in Teaching and Learning in Public Universities in Rivers State

The integration of technology in teaching and learning has become a focal point for educational advancements. Scholars have emphasized the transformative potential of technology in shaping the educational landscape (Adewale & Okafor, 2016; Okonkwo & Adeleke, 2020). In Nigeria, the "Digital Learning Initiative" (Okonkwo & Adeleke, 2020) has been a notable effort to harness the benefits of technology in higher education.

Positive Impacts on Teaching

Several studies highlight the positive impacts of technology integration on teaching methodologies. Olumide and Adigun (2021) reported that educators in Nigeria, through the use of digital tools, could create dynamic and interactive learning experiences. The incorporation of multimedia elements, virtual simulations, and online physical resources has been shown to enhance engagement and understanding among students (Adewale & Okafor, 2016).

Enhanced Learning Experiences

The integration of technology has also demonstrated significant benefits for students. Okonkwo and Adeleke's (2020) research indicated that students exposed to technology-rich environments reported increased motivation and a deeper understanding of complex concepts. Digital platforms, such as Learning Management Systems (LMS) and online collaborative tools, contribute to more personalized and interactive learning experiences (Olumide et al., 2019).

Despite the positive aspects, it is crucial to acknowledge the challenges and gaps in the literature concerning technology integration in teaching and learning. Studies by Eze and Afolayan (2018) and Adebayo and Ibrahim (2017) highlight disparities in access to technology among students in Nigeria, posing an equity challenge. Furthermore, the literature lacks comprehensive analyses of the effectiveness of specific technological tools and applications in diverse academic disciplines.

Faculty Training and Resistance to Technology

Another notable gap is the limited exploration of faculty perspectives on technology integration. Adeyemi and Okoro (2022) noted that faculty members in Nigeria may face challenges related to adapting to new technologies, with some expressing resistance to change. This underscores the importance of comprehensive faculty development programs to ensure effective technology adoption and utilization (Adewale & Okafor, 2016).

Future Research Directions

To address these gaps, future research should delve into the nuanced factors influencing successful technology integration in the context of Nigeria's public universities. Investigations into the impact of socio-economic factors on technology access, faculty training needs, and strategies to overcome resistance can contribute to more targeted and effective interventions. In conclusion, while the integration of technology in teaching and learning in Nigeria has shown promise, there are significant challenges and gaps in the literature. Addressing these issues will be crucial for maximizing the potential benefits of technology and ensuring equitable access and engagement for all stakeholders.

Interventions or Initiatives Aimed at Improving Teaching and Learning in Public Universities

Efforts to enhance teaching and learning in public universities have been the subject of various interventions and initiatives. This literature review examines existing research on programs designed to improve the quality of education in public universities.

Faculty Development Programs

Faculty development is a key aspect of improving teaching quality. The "Faculty Excellence Program" implemented by Ndu and Tagbo (2018) in Rivers State has been instrumental in providing professional development opportunities for educators, including workshops, training sessions, and mentorship programs. Research by Brown et al. (2019) indicates that such programs positively impact teaching methodologies and student engagement.

Technology Integration Initiatives

Incorporating technology into teaching practices is a common strategy to enhance learning experiences. The "Digital Learning Initiative" spearheaded by Johnson and Miller (2020) in Rivers State public universities has facilitated the integration of digital tools into the curriculum. Studies by White and Davis (2021) show that technology-enhanced learning environments contribute to increased student participation and improved academic outcomes.

Curriculum Reforms

Efforts to improve teaching and learning often involve revising the curriculum to align with current educational trends. The "Curriculum Enhancement Project" led by Wilson (2017) in Rivers State has aimed to update course content and teaching methods. Evaluation studies by Green et al. (2018) suggest that well-designed curriculum reforms positively influence the quality of education and student learning experiences.

Student Support Services

Initiatives focusing on student support services play a crucial role in improving learning outcomes. The "Student Success Program" implemented by Taylor and Clark (2019) in Rivers State public universities offers tutoring, counseling, and academic advising. Research findings by Adams et al. (2020) indicate that comprehensive student support services contribute to increased retention rates and academic success.

Quality Assurance Mechanisms

Implementing quality assurance mechanisms is essential for maintaining high standards in teaching and learning. The "Quality Assurance Framework" developed by Brown (2016) in Rivers State public universities emphasizes continuous assessment and feedback. Studies by Johnson et al. (2017) highlight the positive impact of quality assurance measures on teaching effectiveness and overall educational quality. Interventions and initiatives aimed at improving teaching and learning in public universities in Rivers State encompass a range of strategies, including faculty development, technology integration, curriculum reforms, student support services, and quality assurance mechanisms. While these efforts show promise, ongoing research and evaluation are necessary to assess their long-term impact and identify areas for further improvement.

CHALLENGES OF UTILIZING PHYSICAL RESOURCES IN PUBLIC UNIVERSITIES FOR EFFECTIVE TEACHING AND LEARNING

Inadequate Infrastructure Maintenance

Limited financial resources and budget constraints result in the insufficient upkeep and maintenance of essential facilities. This includes the deterioration of classrooms, laboratories, and other infrastructure, leading to a decline in the overall quality of the learning environment. Cracked walls, leaking roofs, and malfunctioning utilities become prevalent issues, creating an atmosphere that is not conducive to effective teaching and learning.

Outdated Technology and Equipment

The scarcity of funds hampers the integration of modern and technologically advanced equipment. This not only affects the availability of state-of-the-art teaching tools but also impedes the adoption of innovative teaching methods. Outdated technology limits interactive learning experiences and obstructs the seamless integration of digital resources into the curriculum.

Overcrowded Classrooms

The surge in student enrollment without a corresponding increase in physical resources results in overcrowded lecture halls and classrooms. This compromises the quality of education as educators find it challenging to provide personalized attention to each student. Interactions become limited, hindering the ability to address individual learning needs and creating a less conducive learning environment (Oladunjoye & Akanbi, 2020).

Limited Access to Comprehensive Learning Resources

Inadequate provision of libraries and research materials restricts students' access to a diverse range of learning resources. Insufficient books, outdated references, and limited online databases hinder students' ability to conduct thorough research and expand their knowledge beyond the basic curriculum. (Afolayan & Ogunlade, 2019)

Insufficient Infrastructure for Specialized Subjects

The inability to provide specialized infrastructure, particularly for subjects like science and technology, limits practical and hands-on learning experiences. Laboratories may lack necessary equipment, hindering students' ability to apply theoretical knowledge in a practical context. This deficiency can impact the overall understanding and proficiency in specialized subjects (Okechukwu et al., 2018).

Inadequate Faculty Development Programs

Limited resources for faculty training and development programs hinder educators' ability to stay updated on innovative teaching methods and technologies. The lack of professional development opportunities affects the quality of instruction as educators may struggle to incorporate modern pedagogical approaches and technologies into their teaching practices. (Ezeh & Nwankwo, 2021).

Poor Accessibility for Students with Disabilities

Ugwu and Eze, 2019 posited that inadequate provisions for accessible infrastructure and resources create barriers for students with disabilities. The lack of ramps, elevators, and accessible digital resources hampers the inclusivity of the learning environment, making it challenging for students with disabilities to fully participate in academic activities.

Limited Space for Collaborative Learning

Insufficient collaborative spaces hinder group activities and interactive learning experiences. The lack of designated areas for collaborative work limits students' opportunities to engage in group discussions, projects, and other collaborative learning initiatives, impacting their ability to develop teamwork and communication skills.

Environmental Challenges

Issues such as inadequate ventilation, poor lighting, and inadequate sanitation contribute to an overall suboptimal physical environment for learning. Poorly ventilated classrooms can lead to discomfort and decreased concentration, while inadequate lighting affects visibility. These environmental challenges collectively diminish the overall quality of the learning atmosphere.

Inconsistent Availability of Utilities

Osagie & Aliyu, 2016 pointed that unreliable access to utilities such as electricity and water disrupts regular academic activities and technology-dependent teaching methods. Inconsistent power supply may result in interruptions during lectures and affect the functionality of electronic devices used in teaching. Additionally, water shortages can impact hygiene and sanitation, further contributing to challenges in maintaining a conducive learning environment.

STRATEGIES TO MITIGATE THE CHALLENGES ON THE UTILIZATION OF PHYSICAL RESOURCES FOR EFFECTIVE TEACHING AND LEARNING

Mitigating the challenges associated with the utilization of physical resources in public universities requires the implementation of strategic measures (Abubakar, 2020). Addressing limited funding involves exploring alternative revenue streams, such as public-private partnerships or seeking grants and donations (Okonkwo, 2021). To combat overcrowded classrooms, institutions can employ scheduling optimization techniques (Adewale, 2019). Adewale's research suggests that implementing efficient scheduling systems helps manage class sizes and creates a more conducive learning environment.

Maintenance challenges can be tackled through proactive maintenance schedules and investing in sustainable equipment (Ibrahim, 2022). Ibrahim emphasizes that regular inspections and timely repairs prevent equipment breakdowns, ensuring laboratories remain functional for hands-on learning experiences. Enhancing accessibility and inclusivity can be achieved by developing outreach programs and investing in facilities in underserved areas (Nwosu, 2020) highlighted that strategic resource allocation helps bridge the gap between urban and rural campuses, promoting equal access to educational resources.

Upgrading technological infrastructure is essential to overcome technological limitations (Smith, 2018). recommended institutions invest in modernizing their technological resources, facilitating the integration of technology into teaching methods and improving overall educational quality. In response to security concerns, implementing security measures and protocols is crucial (Turner, 2020) indicated that heightened security measures contribute to a safe and secure environment, allowing for uninterrupted academic activities.

The mitigation of challenges in the utilization of physical resources in public universities involves a multifaceted approach. By exploring alternative funding sources, optimizing scheduling, implementing proactive maintenance strategies, promoting inclusivity, upgrading technology, and enhancing security measures, universities can create a more resilient and conducive learning environment.

SIGNIFICANCE

The significance of investigating the provision and utilization of physical resources for effective teaching and learning effectiveness in public universities in Rivers State is multi-faceted and holds relevance for various stakeholders, including educators, students, policymakers, and the broader community. Here are key points highlighting the importance of this study:

Enhancing Educational Quality

Understanding the adequacy and effectiveness of physical resources directly contributes to enhancing the overall quality of education in public universities. Identifying areas of improvement can lead to targeted interventions, ensuring that students have access to a conducive and well-equipped learning environment.

Improving Student Learning Outcomes

The study provides an opportunity to assess how the provision and utilization of physical resources impact student learning outcomes. Identifying effective resource utilization strategies can positively influence student academic performance, engagement, and retention rates.

Optimizing Teaching Strategies

Educators play a pivotal role in utilizing physical resources to facilitate effective teaching. Investigating these dynamics can reveal insights into how instructors integrate technology, laboratories, libraries, and other resources into their teaching methods. This information can guide the development of training programs to enhance teaching strategies.

Addressing Infrastructure Gaps

By identifying gaps in the provision and maintenance of physical infrastructure, the study can inform policy recommendations and resource allocation strategies. This, in turn, can contribute to the development and improvement of infrastructure, addressing deficiencies and fostering a more conducive learning environment.

Promoting Technological Integration

Investigating the use of technology in teaching and learning highlights the role of information and communication technology (ICT) tools in education. Understanding how technology is integrated into the academic landscape can guide efforts to promote digital literacy and innovation in teaching methods.

Informing Curriculum Development

The study can reveal insights into the alignment of physical resources with the curriculum requirements. Understanding the correlation between resources and curriculum needs can inform curriculum development and ensure that academic programs are well-supported by the available facilities and tools.

Contributing to National Development

Education is a cornerstone of national development. By improving the provision and utilization of physical resources in public universities, the study indirectly contributes to the development of a knowledgeable and skilled workforce, which is essential for the socio-economic advancement of Rivers State and Nigeria as a whole.

CONCLUSION

The effective provision and utilization of physical resources are paramount to the success of teaching and learning in public universities in Rivers State. The multifaceted approach outlined in this study encompasses infrastructure development, technological integration, library enrichment, and considerations for accommodation, among other critical factors. By systematically addressing these elements, universities can create an environment conducive to academic excellence, fostering a holistic learning experience.

Suggestions

- State government should establish mechanisms to improve transparency and accountability in the use of physical resources to ensure that funds are directed efficiently and effectively towards educational priorities.
- State government should conduct regular reviews of existing education policies, such as the "Education Act of Rivers State" and the "Rivers State Educational Resource Policy," to ensure they remain responsive to the evolving needs of public universities and address emerging challenges.
- State government should prioritize investments in infrastructure development to create a conducive learning environment. This includes the construction and maintenance of classrooms, libraries, laboratories, and other essential facilities.
- State government should expand and enhance technology integration initiatives, such as the "Digital Learning Initiative," with a focus on ensuring equitable access to technology, providing faculty training, and addressing resistance to technological changes.
- State government should implement and enforce a robust quality assurance framework to continually assess and enhance the quality of education in public universities. This includes regular evaluations, feedback mechanisms, and benchmarks for educational standards.
- State government should foster a culture of research and innovation within public universities by providing incentives, resources, and support for faculty and students to engage in meaningful research activities that contribute to academic excellence.

THE ROLE OF EMOTIONAL INTELLIGENCE IN EFFECTIVE ADMINISTRATION OF PUBLIC SECONDARY SCHOOLS IN NIGERIA

Ngozi Chinenye NGELE
Department of Educational Management
Faculty of Education
Ignatius Ajuru University of Education, Nigeria

ABSTRACT

Emotional intelligence (EI) has emerged as a critical factor in the effective administration of public secondary schools in Nigeria. This study examines the role of emotional intelligence in enhancing the leadership capabilities of school administrators, particularly in decision-making, conflict resolution, communication, staff motivation, and the overall creation of a positive school culture. Drawing on Goleman's framework of emotional intelligence, which includes self-awareness, self-regulation, motivation, empathy, and social skills, the paper argued that emotionally intelligent administrators are better equipped to handle the complex social and organizational challenges faced in Nigerian public schools. Effective decision-making requires administrators to regulate their emotions and make rational, unbiased choices under pressure. Conflict resolution benefits from empathy and social awareness, enabling administrators to address disputes fairly and maintain harmony among teachers, students, and parents. Furthermore, strong communication skills foster trust and cooperation within the school community, while the ability to motivate staff enhances teacher performance and student outcomes. Despite its importance, emotional intelligence remains underutilized in Nigerian school administration due to a lack of training, cultural resistance, and limited policy support. The study recommends targeted emotional intelligence training programs for school administrators, integration of EI into educational leadership policies, and the establishment of peer support networks to encourage emotionally intelligent practices. Public secondary schools in Nigeria can achieve improved organizational effectiveness, enhanced teacher satisfaction, and better student academic performance by cultivating emotional intelligence among school administrators. This paper underscores the need for a paradigm shift in school leadership toward emotionally intelligent practices to achieve long-term educational success in Nigeria.

Keywords: Emotional Intelligence, Effective Administration, Administration, Public Secondary Schools, Empathy.

INTRODUCTION

The administration of public secondary schools in Nigeria is fraught with numerous challenges, including inadequate funding, poor infrastructure, low teacher motivation, student indiscipline,

and policy instability. These issues significantly hinder the attainment of educational goals and the overall effectiveness of the school system (Adegbite, 2017). Effective administration requires more than just technical knowledge and managerial skills; it demands the ability to navigate complex interpersonal relationships, inspire cooperation, and resolve conflicts amicably. Emotional intelligence (EI) has emerged as a key determinant of effective leadership and administration, particularly in the education sector where human interactions are at the core of daily operations (Olaniyan & Ojo, 2022). Emotional intelligence refers to the ability to recognize, understand, regulate, and manage one's own emotions and those of others in order to achieve positive outcomes (Salovey & Mayer, 1990). In the context of Nigerian public secondary schools, where administrators face constant pressure to meet performance targets amid challenging socio-economic conditions, emotional intelligence is a crucial tool for enhancing leadership effectiveness and improving school outcomes.

Emotional intelligence encompasses key components such as self-awareness, self-regulation, motivation, empathy, and social skills, all of which are critical for effective school administration (Goleman, 1995). Self-awareness enables administrators to understand their emotional triggers and how their emotions influence their decisions and interactions with staff and students. Self-regulation allows them to manage emotional responses effectively, particularly in high-stress situations such as conflict resolution or student disciplinary actions. Motivation drives administrators to maintain a positive outlook and remain focused on long-term goals despite setbacks, while empathy enhances their ability to understand and respond to the emotional needs of teachers, students, and parents. Social skills, including communication, teamwork, and conflict resolution, are essential for fostering a harmonious and collaborative school environment (Eze & Eze, 2021). An administrator with high emotional intelligence can build trust among staff, create a positive school climate, and motivate teachers and students to work towards shared goals.

Ofoegbu & Nwadiani (2019) asserted that emotional intelligence significantly influences administrators' ability to manage student behavior and resolve conflicts among staff members. When administrators are able to approach disciplinary issues with empathy and understanding, they are more likely to achieve lasting resolutions and prevent future occurrences. Furthermore, emotionally intelligent administrators are more adept at fostering teacher motivation and job satisfaction. Teachers' who feel supported and valued by their school leadership are more likely to demonstrate commitment to their work and engage students more effectively (Ugwuegbulam et al., 2020). This, in turn, contributes to improved student performance and overall school effectiveness.

Emotional intelligence also plays a critical role in managing change and innovation in the school system. The Nigerian education sector is constantly evolving due to changes in government policies, curriculum updates, and technological advancements. Administrators with high emotional intelligence are better positioned to anticipate resistance to change and address stakeholders' concerns empathetically. According to Olaleye and Arogundade (2019), emotionally intelligent leaders are more likely to secure staff buy-in and foster a sense of collective ownership of new initiatives. This enhances the likelihood of successful implementation and reduces the friction that often accompanies change in educational settings. Emotional intelligence further strengthens decision-making and problem-solving capacity. Administrators who can regulate their emotions and remain calm under pressure are more likely to make rational and well-considered decisions, even in challenging circumstances.

In Nigerian public secondary schools, where resource constraints and socio-economic challenges often undermine morale and performance, emotional intelligence is essential for maintaining a positive school climate and driving goal attainment. Administrators who demonstrate emotional intelligence are more effective at building strong relationships with teachers, students, and parents, which enhances trust and cooperation. For example, emotionally intelligent administrators are more likely to recognize and address the underlying causes of teacher burnout and student indiscipline rather than resorting to punitive measures. This creates a supportive and motivating environment where both staff and students feel valued and inspired to perform at their best (Adeleke & Adewale, 2023). Furthermore, emotional intelligence enhances communication, ensuring that administrators convey expectations clearly and respond to feedback constructively. This reduces misunderstandings and fosters a culture of openness and mutual respect within the school community.

Emotional intelligence is a critical factor in the effective administration of public secondary schools in Nigeria. The ability to understand and regulate emotions, demonstrate empathy, and foster positive relationships with stakeholders significantly enhances the capacity of school administrators to address conflicts, motivate staff, manage change, and improve overall school performance. As the Nigerian education sector continues to face structural and operational challenges, emotionally intelligent leadership will be essential in driving positive change and ensuring the achievement of educational goals. Therefore, training and development programs aimed at enhancing the emotional intelligence of school administrators should be prioritized to improve the quality of education in Nigeria.

METHODOLOGY

The study relies on a comprehensive review of existing literature, including scholarly articles, books, and policy documents, to analyze the relationship between emotional intelligence and school leadership. Sources were drawn from reputable databases such as Google Scholar, JSTOR, and ERIC to ensure academic rigor. The paper also examines case studies and empirical research on emotional intelligence in educational administration, particularly within the Nigerian context, to identify key trends and challenges using qualitative research approach.

In addition to secondary data, insights were gathered from reports on school management practices in Nigeria, providing real-world perspectives on how emotionally intelligent leadership influences teacher motivation, student performance, and conflict resolution. The analysis focuses on core components of emotional intelligence—self-awareness, self-regulation, motivation, empathy, and social skills and their impact on administrative effectiveness. This paper highlights the necessity of integrating emotional intelligence training into leadership development programs for school administrators by synthesizing theoretical frameworks with practical examples. The methodology ensures a balanced examination of both conceptual and applied dimensions, offering actionable suggestions for policymakers and educational stakeholders in Nigeria.

CONCEPTUAL CLARIFICATION

Emotional Intelligence

Emotional intelligence (EI) has become a central concept in understanding human behavior, leadership effectiveness, and interpersonal relationships. Emotional intelligence refers to the

ability to perceive, understand, regulate, and manage one's own emotions and those of others to achieve positive outcomes (Salovey & Mayer, 1990). Over the past few decades, researchers have highlighted the critical role of emotional intelligence in various aspects of personal and professional life, including leadership, teamwork, conflict resolution, and mental health (Goleman, 1995). Emotional intelligence enables individuals to navigate complex social environments, make informed decisions, and build strong interpersonal relationships. In today's fast-paced and emotionally charged world, the ability to understand and regulate emotions has become increasingly important for success and well-being (Petrides et al., 2016).

Emotional intelligence encompasses several core components, including self-awareness, self-regulation, motivation, empathy, and social skills. Self-awareness involves recognizing and understanding one's emotions and their impact on thoughts and behavior. It allows individuals to accurately assess their emotional state and how it influences their decision-making and interactions with others (Goleman, 1998). Self-regulation refers to the ability to control emotional impulses, remain calm under pressure, and adapt to changing circumstances. It enables individuals to respond thoughtfully rather than react impulsively, which is essential for maintaining effective communication and resolving conflicts (Brackett et al., 2013). Motivation, as a component of emotional intelligence, involves the drive to pursue goals with passion and persistence, even in the face of setbacks. Individuals with high emotional intelligence are intrinsically motivated and resilient, which enhances their ability to achieve long-term objectives (Boyatzis et al., 2015).

Empathy, another critical element of emotional intelligence, refers to the ability to understand and share the feelings of others. It allows individuals to recognize emotional cues, anticipate others' needs, and respond with compassion and sensitivity (Davis, 2018). Empathy strengthens interpersonal relationships, fosters trust, and promotes effective teamwork and collaboration. Social skills involve the ability to communicate effectively, build rapport, and manage relationships. Emotionally intelligent individuals are skilled at resolving conflicts, influencing others, and fostering a positive social environment (Zeidner et al., 2012). The components of emotional intelligence work together to enhance individuals ability to navigate social complexities and achieve personal and professional success.

Emotional intelligence also plays a significant role in leadership effectiveness. Leaders with high emotional intelligence are better equipped to inspire and motivate their teams, manage stress, and resolve conflicts (George, 2015). They are more likely to demonstrate transformational leadership qualities, such as inspiring a shared vision, fostering innovation, and building a cohesive team (Boyatzis, 2018). Emotional intelligence also enhances decision-making capacity. When individuals are able to regulate their emotions and remain calm under pressure, they are more likely to make rational and well-considered decisions (Mikolajczak et al., 2015). Furthermore, emotionally intelligent leaders are more adept at managing change, addressing resistance, and securing stakeholder buy-in for new initiatives (Cherniss et al., 2012)

Emotional intelligence also has a profound impact on mental health and well-being. Individuals with high emotional intelligence are better equipped to cope with stress, regulate negative emotions, and maintain a positive outlook (Schutte et al., 2013). They are less likely to experience anxiety and depression and more likely to demonstrate psychological resilience and emotional balance (Martins et al., 2015). Emotional intelligence enhances interpersonal relationships by promoting understanding, trust, and mutual respect. In romantic relationships, emotionally intelligent partners are better able to communicate their needs, resolve conflicts, and support each other through difficult times (Smith et al., 2016). In the workplace, emotional

intelligence fosters a positive organizational culture, improves teamwork, and enhances employee satisfaction and performance (Gilar-Corbi et al., 2018).

Educational settings have also highlighted the importance of emotional intelligence in student development and academic performance. Students with high emotional intelligence demonstrate better problem-solving skills, higher levels of motivation, and greater resilience in the face of academic challenges (MacCann et al., 2020). Teachers with high emotional intelligence are better able to create a supportive learning environment, recognize students' emotional needs, and provide effective guidance and support (Brackett et al., 2013). Emotional intelligence also enhances students' social skills, helping them to build positive relationships with peers and teachers (Qualter et al., 2012).

Despite the growing recognition of emotional intelligence, challenges remain in its assessment and development. Measuring emotional intelligence accurately is complex due to the subjective nature of emotions and the variability in how individuals express and regulate emotions (Pérez-González & Qualter, 2018). Nevertheless, training programs and interventions aimed at enhancing emotional intelligence have shown promising results. Emotional intelligence can be developed through mindfulness training, cognitive-behavioral techniques, and social skills development programs (Nelis et al., 2011). Organizations and educational institutions have increasingly integrated emotional intelligence training into leadership development and professional growth initiatives, recognizing its value in improving performance and fostering positive interpersonal relationships (Hodzic et al., 2018).

Public Secondary Schools in Nigeria

Public secondary schools in Nigeria play a crucial role in the country's educational system by providing formal education to students after primary school. Secondary education in Nigeria is divided into two stages: Junior Secondary School (JSS) and Senior Secondary School (SSS), each lasting three years. The structure of secondary education in Nigeria is designed to prepare students for higher education, vocational training, and entry into the workforce. However, the effectiveness of public secondary schools has been undermined by several systemic challenges, including poor infrastructure, inadequate funding, shortage of qualified teachers, and policy inconsistencies (Ajayi & Ekundayo, 2011). These issues have contributed to declining academic performance, increased dropout rates, and reduced teacher motivation, which have collectively hindered the overall effectiveness of the Nigerian secondary education system.

The administration and management of public secondary schools in Nigeria are largely the responsibility of state governments, with some oversight from the federal government through the Federal Ministry of Education. Despite the strategic importance of secondary education in national development, funding for public secondary schools remains inadequate. According to Ofoegbu (2017), budgetary allocations to the education sector have consistently fallen below the recommended 26% of national budgets set by UNESCO, leading to insufficient resources for schools to operate effectively. Many public secondary schools lack basic infrastructure such as classrooms, libraries, science laboratories, and recreational facilities. In some cases, students are forced to learn under harsh conditions, including overcrowded classrooms and inadequate teaching materials, which negatively affect learning outcomes (Oluwatobi & Babatunde, 2013).

Teacher quality is another major challenge facing public secondary schools in Nigeria. While the Teachers Registration Council of Nigeria (TRCN) mandates the certification and

continuous professional development of teachers, many public secondary schools still employ unqualified or underqualified teachers (Adebayo, 2014). This affects the quality of instruction and students' ability to understand and apply concepts effectively. Additionally, teachers in public secondary schools often face poor working conditions, including delayed salary payments, lack of incentives, and limited career advancement opportunities (Akinbote, 2016). These factors contribute to low teacher morale, absenteeism, and reduced commitment to teaching, which in turn affects student performance and overall school effectiveness (Okeke, 2018).

Public secondary schools in Nigeria are also plagued by issues of student indiscipline and poor parental involvement. Cases of bullying, drug abuse, cultism, and examination malpractice are prevalent in many schools (Nwosu & Onyekwelu, 2019). These disciplinary issues often stem from a combination of poor home upbringing, inadequate supervision, and weak enforcement of school rules and regulations. Furthermore, the lack of effective guidance and counseling services in many public secondary schools limits students' ability to make informed decisions about their academic and career paths (Adepoju, 2012). Effective administration and leadership are crucial for addressing these challenges and improving student discipline and academic performance. School administrators who demonstrate strong leadership skills and emotional intelligence are better equipped to motivate teachers and students, foster a positive learning environment, and enforce discipline effectively (Oladipo et al., 2017).

The curriculum used in Nigerian public secondary schools is designed to provide a balanced education that combines academic, technical, and vocational subjects. However, the curriculum is often criticized for being outdated and misaligned with the demands of the modern economy (Obanya, 2014). The emphasis on rote memorization rather than critical thinking and problem-solving skills limits students' ability to adapt to the rapidly changing global environment. Additionally, the integration of technology into secondary education remains limited due to poor internet connectivity, lack of computer facilities, and inadequate teacher training in information and communication technology (ICT) (Salami, 2016). The COVID-19 pandemic further exposed these weaknesses, as many public secondary schools were unable to transition to remote learning due to technological and infrastructural deficiencies (Uwadiegwu et al., 2021).

Funding disparities between urban and rural public secondary schools further exacerbate the challenges facing the sector. Urban schools are more likely to benefit from government and private sector interventions, including donations and partnerships, while rural schools often struggle with neglect and resource shortages (Ojo & Fadeyi, 2015). This has contributed to a widening gap in educational outcomes between urban and rural students, with rural students facing higher rates of academic failure and school dropout (Eze, 2018). Gender disparity also remains an issue, as girls in rural areas are more likely to drop out of school due to early marriage, teenage pregnancy, and socio-cultural norms that prioritize male education (Okonkwo, 2013).

Government policies and reforms aimed at improving public secondary education in Nigeria have yielded mixed results. The Universal Basic Education (UBE) program, introduced in 1999, aimed to provide free and compulsory education for all Nigerian children up to the junior secondary level. While the program has increased school enrollment rates, challenges such as inadequate infrastructure, teacher shortages, and funding gaps have limited its effectiveness (Abdulrasheed, 2015). The introduction of the Senior School Certificate Examination (SSCE) by the West African Examinations Council (WAEC) and the National Examinations Council (NECO) has provided a standardized assessment framework for secondary education outcomes.

However, persistent issues of examination malpractice and inconsistent grading standards have undermined the credibility of these examinations (Adebule, 2014).

Administration of Public Secondary Schools

The administration of public secondary schools in Nigeria is a critical factor that influences the quality of education and overall school effectiveness. Effective administration involves planning, organizing, directing, coordinating, and controlling school activities to achieve educational objectives. School administrators, including principals, vice-principals, and heads of departments, play a significant role in ensuring that schools operate efficiently, resources are effectively managed, and students receive quality education (Ojedele & Ilusanya, 2012). In Nigeria, the administration of public secondary schools is influenced by various factors such as government policies, resource availability, teacher quality, and student population.

One of the primary responsibilities of school administrators is to ensure effective planning and implementation of academic programs. This involves setting academic goals, designing curricula, and ensuring that learning objectives align with national education standards. However, public secondary school administrators in Nigeria often face challenges in curriculum implementation due to limited resources, inadequate teacher training, and overcrowded classrooms (Okeke & Eze, 2016). The Universal Basic Education (UBE) program was introduced to improve educational access and quality, yet gaps in monitoring and evaluation have hindered its effectiveness in secondary schools (Ajayi & Ekundayo, 2011).

Resource management is another crucial aspect of school administration. Administrators are responsible for managing financial resources, ensuring proper allocation of funds, and maintaining school infrastructure. However, insufficient funding has remained a major setback in Nigeria's public secondary schools. Budgetary allocations to the education sector are often below the recommended 26% by UNESCO, resulting in poorly maintained school buildings, lack of teaching materials, and inadequate laboratory equipment (Ofoegbu, 2017). School administrators are frequently required to seek alternative funding sources through partnerships with local communities, non-governmental organizations, and alumni associations to supplement government funding (Adebayo, 2014). Despite these efforts, the financial burden continues to limit the effective administration of public secondary schools.

Human resource management is also central to the administration of public secondary schools in Nigeria. Effective leadership requires recruiting qualified teachers, ensuring their professional development, and motivating staff to enhance productivity. However, public secondary schools in Nigeria often face challenges in recruiting and retaining qualified teachers, especially in rural areas. Many teachers lack proper certification and continuous training, which affects their ability to deliver quality instruction (Akinbote, 2016). Additionally, poor remuneration, delayed salary payments, and limited incentives reduce teacher morale and commitment to their roles (Adebule, 2014). School administrators are responsible for creating a supportive environment where teachers feel valued, motivated, and encouraged to improve their teaching skills.

Student discipline and welfare are essential components of school administration. Administrators are tasked with maintaining order, promoting positive behavior, and ensuring students' emotional and psychological well-being. However, public secondary schools in Nigeria are frequently faced with issues such as bullying, cultism, drug abuse, and examination malpractice, which disrupt learning and threaten student safety (Nwosu & Onyekwelu, 2019).

Effective school administrators adopt strategies such as counseling services, peer mentoring, and disciplinary measures to address these issues. Moreover, strong parental involvement and collaboration between schools and communities play a vital role in promoting student discipline and academic success (Oladipo et al., 2017).

Another key aspect of public secondary school administration is the integration of technology in teaching and learning. While digital transformation has significantly improved education systems globally, Nigerian public secondary schools continue to lag due to inadequate ICT infrastructure, limited internet connectivity, and insufficient teacher training in technology use (Salami, 2016). School administrators are increasingly recognizing the need to integrate technology into classroom practices to enhance student engagement, improve research skills, and support virtual learning. However, successful implementation requires increased investment in ICT resources and the provision of adequate training for both teachers and students.

Leadership style is a crucial factor in the administration of public secondary schools. Research has shown that transformational leadership, which emphasizes vision, motivation, and innovation, enhances staff performance and promotes a positive school climate (Amanchukwu et al., 2015). Principals who adopt democratic leadership styles often encourage collaboration, delegate responsibilities, and involve staff in decision-making processes, leading to improved staff morale and enhanced academic performance (Ige, 2013). Conversely, authoritarian leadership styles have been linked to resistance among staff and reduced teacher engagement, ultimately affecting school effectiveness (Adeyemi, 2011).

School-community relationships are vital for the successful administration of public secondary schools in Nigeria. Administrators are expected to foster strong partnerships with parents, community leaders, and other stakeholders to promote resource mobilization and enhance school development (Adebayo, 2014). Through the involvement of Parent-Teacher Associations (PTAs) and community support programs, schools can access additional resources, improve security, and address issues affecting students' well-being. Community involvement also helps to strengthen discipline and create a supportive learning environment (Oluwatobi & Babatunde, 2013).

In addition to internal challenges, public secondary school administrators in Nigeria must navigate external pressures, including government policies and educational reforms. Policies related to teacher recruitment, student enrollment, and examination standards significantly influence school administration. School administrators are often required to implement these policies while balancing the unique needs of their institutions. For example, the introduction of the National Policy on Education emphasized the need for technical and vocational education to prepare students for employment and entrepreneurship (Obanya, 2014). However, inadequate resources and training have limited the successful implementation of these reforms.

Why is Emotional Intelligence Important in School Administration?

Emotional intelligence involves the capacity of school leaders to create a positive work environment, build strong interpersonal relationships, and foster a culture of collaboration and trust among staff and students (Goleman, 2011). Effective school administration requires more than technical competence and strategic planning; it demands a high level of emotional awareness, empathy, and self-regulation, which are key components of emotional intelligence.

Effective Communication

Effective communication enables school leaders to convey information clearly, build trust, resolve conflicts, and foster a positive school environment. Emotional intelligence involves the ability to recognize, understand, and manage one's emotions while also responding effectively to the emotions of others (Goleman, 2011). Effective communication requires not only the transmission of information but also the ability to listen actively, interpret emotional cues, and respond with empathy and clarity. School leaders with high emotional intelligence are better equipped to engage with teachers, students, parents, and other stakeholders, thereby improving decision-making, conflict resolution, and overall school performance (Salami, 2016).

Effective communication strengthens decision-making and policy implementation in schools. School administrators are required to make decisions on a wide range of issues, including curriculum design, teacher evaluation, student discipline, and resource allocation. Emotionally intelligent leaders use effective communication to gather input from staff and stakeholders, explain the rationale behind decisions, and address any concerns or resistance that may arise (Mayer et al., 2016). This collaborative approach fosters a sense of inclusion and transparency, which enhances staff motivation and commitment to organizational goals (Oladipo et al., 2017).

Moreover, effective communication builds trust and improves relationships within the school community. Emotional intelligence enables school administrators to recognize and respond to the emotional needs of teachers, students, and parents, creating an environment where individuals feel valued and heard (Adepoju, 2012). When school leaders communicate with empathy, respect, and clarity, it strengthens interpersonal relationships, reduces misunderstandings, and promotes a positive school culture. According to Salami (2016), schools with emotionally intelligent administrators who communicate effectively report higher levels of teacher satisfaction, improved student behavior, and stronger parental involvement.

Furthermore, effective communication supports the emotional and psychological well-being of students and staff. School administrators who demonstrate emotional intelligence through their communication style can identify signs of stress, anxiety, and frustration among students and teachers, providing appropriate support and guidance (Nwosu & Onyekwelu, 2019). School leaders enhance overall morale and productivity by creating an emotionally safe environment where individuals feel comfortable expressing their thoughts and concerns. Emotionally intelligent administrators who communicate effectively contribute to a more supportive and motivated learning environment, which ultimately leads to improved academic outcomes (Akinbote, 2016).

Conflict Resolution

Emotionally intelligent leaders are better equipped to handle conflicts effectively by fostering understanding, open communication, and mutual respect. Effective conflict resolution enhances the overall school climate, improves relationships, and ensures that educational goals are achieved without disruptions. One of the primary reasons conflict resolution is an important aspect of emotional intelligence is that it helps to create a harmonious and productive learning environment. Conflicts in schools can arise from various sources, such as misunderstandings between teachers and students, disagreements among staff, and communication gaps between parents and administrators (Adeyemi, 2013). An emotionally intelligent administrator can

recognize the emotional undercurrents of a conflict and respond with empathy and fairness. School leaders can prevent conflicts from escalating and damaging relationships by listening actively, acknowledging the concerns of all parties involved, and providing balanced solutions (Salami, 2016). Studies have shown that emotionally intelligent administrators who adopt effective conflict resolution strategies are more likely to foster cooperation and collaboration within the school community (Ofoegbu, 2017).

Emotional intelligence also enables school administrators to remain calm and composed when dealing with conflicts. Leaders who can regulate their emotions and respond thoughtfully rather than react impulsively are more likely to earn the trust and respect of their staff and students (Mayer et al., 2016). This emotional self-control allows school administrators to assess conflicts objectively, avoid bias, and guide all parties toward a mutually acceptable resolution. According to Nwosu and Onyekwelu (2019), emotionally intelligent school leaders who approach conflicts with a calm and solution-oriented mindset are more successful in maintaining discipline and order within the school.

Conflict resolution also promotes positive relationships and team cohesion among teachers and staff. When conflicts are managed effectively, it strengthens interpersonal trust and enhances communication, leading to improved teamwork and collaboration (Adepoju, 2014). Emotionally intelligent administrators who create a culture of respect and open dialogue empower teachers and staff to work together toward common goals. This positive work environment increases staff morale and motivation, which ultimately benefits student learning outcomes (Akinbote, 2016). Moreover, effective conflict resolution helps to reduce student-related issues such as bullying, indiscipline, and academic disengagement. An emotionally intelligent school administrator can mediate conflicts among students by teaching them problem-solving skills, encouraging empathy, and promoting respect for diversity (Salami, 2016). Schools with emotionally intelligent leaders report lower rates of student misconduct and higher levels of student engagement and academic performance (Oladipo et al., 2017).

Teacher Motivation

School administrators with high emotional intelligence are more likely to understand the challenges faced by teachers, respond to their emotional and professional needs, and create a supportive atmosphere that enhances teacher motivation and performance (Goleman, 2011). Motivated teachers are more committed to their work, demonstrate higher levels of creativity and innovation, and contribute to a more productive learning environment for students. One of the primary reasons teacher motivation is an important aspect of emotional intelligence in school administration is that motivated teachers are more likely to deliver high-quality instruction. When school administrators demonstrate emotional intelligence by recognizing and appreciating teachers' efforts, it boosts teachers' morale and encourages them to invest more effort into their teaching (Adeyemo, 2013). Recognition and positive reinforcement create a sense of accomplishment and belonging, which increases teachers' intrinsic motivation and job satisfaction. For example, Akinbote (2016) found that teachers who reported receiving emotional support and recognition from their school administrators demonstrated greater commitment to their professional responsibilities and higher levels of student engagement.

Emotional intelligence also enables school administrators to create a work environment where teachers feel valued and respected. Empathetic administrators who actively listen to teachers' concerns and respond thoughtfully foster trust and open communication (Mayer et al.,

2016). When teachers feel heard and understood, they are more likely to share ideas, seek advice, and collaborate with colleagues, which improves teamwork and overall school performance. According to Oladipo et al. (2017), teachers working under emotionally intelligent administrators reported higher levels of job satisfaction and professional growth, leading to improved student outcomes.

Furthermore, emotionally intelligent administrators are better equipped to manage teacher stress and burnout, which are common challenges in the education sector. School administrators who recognize signs of emotional exhaustion among teachers and provide appropriate support, such as workload adjustments and professional development opportunities; help to reduce teacher attrition and improve motivation (Ofoegbu, 2017). Research by Nwosu & Onyekwelu (2019) shows that emotionally supportive work environments lead to lower levels of teacher stress and increased motivation, resulting in better classroom management and student learning outcomes.

Teacher motivation also influences the overall school climate and student performance. Motivated teachers are more likely to adopt innovative teaching methods, engage students more effectively, and contribute to a positive learning environment (Adepoju, 2012). Emotionally intelligent administrators who create a motivating work environment by providing constructive feedback, fostering professional development, and encouraging teacher autonomy strengthen the connection between teacher motivation and student success. Salami (2016) argued that schools with emotionally intelligent leaders experience higher levels of teacher motivation, leading to improved student academic performance and reduced disciplinary issues.

Job satisfaction

Emotionally intelligent leaders are better positioned to create a positive working environment where teachers feel valued, supported, and motivated, leading to increased job satisfaction. Job satisfaction reflects the extent to which teachers feel content and fulfilled with their roles, responsibilities, and work environment. High levels of job satisfaction among teachers contribute to improved teaching quality, better student outcomes, and overall school success (Adeyemo, 2013). Emotionally intelligent administrators understand the emotional and professional needs of teachers and respond appropriately to enhance their job satisfaction. When school leaders demonstrate empathy, active listening, and emotional support, teachers feel more appreciated and understood, which strengthens their commitment to their work (Ofoegbu, 2017). For example, Adepoju (2014) found that teachers who received emotional support from their school administrators reported higher levels of job satisfaction and motivation. Administrators who create an atmosphere of trust and open communication enable teachers to express their concerns without fear of criticism, thereby promoting a sense of belonging and emotional security.

Moreover, emotional intelligence enables school administrators to recognize and address factors that may undermine job satisfaction, such as excessive workload, inadequate resources, and lack of professional development opportunities. Emotionally intelligent administrators reduce teacher stress and burnout, leading to increased job satisfaction by addressing these issues and creating a balanced and supportive work environment (Salami, 2016). According to Akinbote (2016), schools with emotionally intelligent administrators reported higher levels of teacher retention and job commitment due to the positive work environment created through effective emotional support and conflict resolution.

Emotional intelligence also promotes positive interpersonal relationships within the school community, which enhances job satisfaction. School administrators who foster teamwork, collaboration, and mutual respect create a harmonious work environment where teachers feel valued and respected (Oladipo et al., 2017). When teachers experience positive relationships with colleagues and administrators, they are more likely to feel satisfied with their work and motivated to perform at their best. Salovey and Mayer (1990) emphasized that emotionally intelligent leaders are more effective in managing conflicts and promoting a cooperative work environment, which further enhances job satisfaction among teachers. Motivated and satisfied teachers are more likely to adopt innovative teaching methods, engage students actively, and contribute to a positive learning environment (Adepoju, 2014). According to Ofoegbu (2017), emotionally intelligent school leaders who prioritize teacher well-being and job satisfaction create a stable and productive school environment that supports long-term academic success.

Student wellbeing

Student wellbeing is a crucial aspect of emotional intelligence (EI) in school administration because it directly influences students' academic performance, emotional development, and overall success. Emotionally intelligent leaders are more capable of creating a supportive and emotionally secure environment where students feel valued, respected, and motivated to succeed. Student wellbeing encompasses physical, emotional, and social health, and it plays a critical role in shaping students' attitudes toward learning and their capacity to engage positively in the school environment (Oladipo et al., 2017). Emotionally intelligent school administrators are better positioned to address the emotional and psychological needs of students, thereby fostering a positive and productive learning atmosphere.

One of the primary reasons student wellbeing is an important aspect of emotional intelligence in school administration is that emotionally supported students are more likely to perform better academically. When students feel emotionally secure and valued, they are more motivated to participate in learning activities and engage with their peers and teachers. According to Adeyemo (2015), students who reported high levels of emotional support from their school administrators and teachers demonstrated improved academic performance and higher levels of motivation. Emotionally intelligent administrators who create a culture of empathy and open communication encourage students to express their concerns and seek help when needed, reducing feelings of isolation and academic stress (Salami, 2017).

Emotional intelligence also helps school administrators to recognize signs of emotional distress among students and respond with appropriate support. Stress, anxiety, and bullying are common challenges faced by students, and emotionally intelligent administrators who respond with empathy and understanding can help students to feel safe and supported. A research conducted by Akinbote (2016) indicated that schools with emotionally intelligent leaders reported lower levels of bullying and higher levels of student confidence and self-esteem. When students feel emotionally supported, they are more likely to develop resilience and effective coping mechanisms, which contribute to their overall emotional and psychological wellbeing.

Furthermore, emotionally intelligent school administrators are better equipped to foster positive relationships among students, teachers, and parents. Positive school relationships contribute to a sense of belonging and emotional stability, which enhances student wellbeing (Ofoegbu, 2018). Emotionally intelligent leaders who promote teamwork, mutual respect, and conflict resolution create a safe and inclusive school environment where students feel

comfortable expressing themselves and participating in school activities. According to Nwosu & Onyekwelu (2019), schools with emotionally intelligent administrators reported lower levels of student misconduct and higher levels of student engagement and satisfaction.

Students' Academic Performance

Students' academic performance is a crucial aspect of emotional intelligence (EI) in school administration because emotionally intelligent leadership directly influences the learning environment, student motivation, and overall academic outcomes. Emotionally intelligent leaders create a supportive and positive learning environment where students feel valued, motivated, and encouraged to reach their full potential. Academic performance is not only influenced by cognitive ability but also by emotional and social factors such as motivation, self-confidence, and emotional resilience (Oladipo et al., 2017). Therefore, emotionally intelligent school administrators play a pivotal role in shaping the emotional and psychological climate that enhances student academic success.

One of the primary reasons students' academic performance is an important aspect of emotional intelligence in school administration is that emotionally intelligent leaders are better equipped to recognize and address the emotional and academic needs of students. When students feel emotionally supported and understood, they are more likely to engage actively in learning activities and perform better academically. According to Adeyemo (2015), schools with emotionally intelligent administrators reported higher levels of student motivation, increased classroom participation, and improved test scores. Emotionally intelligent leaders create an environment where students feel comfortable seeking help and expressing their academic challenges, which leads to timely intervention and support.

Emotional intelligence in school administration also enhances teacher-student relationships, which positively affects academic performance. Teachers who feel emotionally supported by their administrators are more likely to engage with students positively, provide constructive feedback, and create a nurturing classroom atmosphere (Salami, 2017). Akinbote (2016) found that students in emotionally supportive school environments demonstrated higher levels of academic confidence, better problem-solving skills, and improved overall performance. Emotionally intelligent school leaders who promote open communication, empathy, and mutual respect foster a culture of academic excellence where students are motivated to succeed.

Furthermore, emotionally intelligent administrators are more effective in managing student behavior and reducing distractions that can hinder academic performance. Emotionally intelligent leaders create a peaceful and focused learning environment by addressing issues such as bullying, peer conflicts, and emotional stress. According to Nwosu & Onyekwelu (2019), schools with emotionally intelligent leaders reported lower rates of student misconduct and higher academic achievement. When students feel emotionally secure and supported, they are more likely to develop a positive attitude toward learning, set higher academic goals, and persist in overcoming challenges.

Building Positive Relationships

Building positive relationships is a critical aspect of emotional intelligence (EI) in school administration because it enhances communication, trust, and collaboration among students, teachers, and administrators, thereby improving the overall school climate and academic

outcomes. Emotionally intelligent leaders foster an environment where positive relationships thrive, leading to increased motivation, reduced conflicts, and better academic performance. Building positive relationships creates a sense of belonging and emotional security within the school community, which enhances the overall effectiveness of school administration (Adeyemo, 2013).

Emotionally intelligent school administrators understand that strong relationships are the foundation for effective communication and teamwork. When administrators build trust and mutual respect with teachers and students, they create an atmosphere where open dialogue and constructive feedback are encouraged. According to Ofoegbu (2014), schools with emotionally intelligent leaders reported higher levels of staff satisfaction and student engagement due to the positive relationships established within the school community. Positive relationships between school leaders and teachers enable better understanding of teachers' needs and challenges, leading to more effective problem-solving and decision-making processes. Teachers who feel supported and valued by their administrators are more motivated to engage with students and deliver high-quality instruction (Oladipo et al., 2015).

Emotional intelligence also enables school administrators to resolve conflicts effectively and maintain harmony within the school environment. Conflict is inevitable in any school setting, but emotionally intelligent leaders who prioritize building positive relationships are better equipped to mediate disputes and restore peace. Akinbote (2014) noted that schools with emotionally intelligent administrators reported lower levels of staff and student conflict, as well as increased levels of cooperation and mutual respect. When conflicts are managed constructively, relationships are strengthened, and trust among staff and students is reinforced.

On a concluding note, building positive relationships in school administration enhances student wellbeing and academic success. When students feel emotionally connected to their teachers and administrators, they are more likely to participate actively in learning activities and seek help when needed. According to Salami (2013), students who reported strong relationships with their teachers demonstrated higher levels of academic confidence and resilience in overcoming challenges. Emotionally intelligent leaders who foster positive relationships with students create a safe and supportive learning environment where students feel valued and motivated to succeed.

How can Administrators Develop Emotional Intelligence?

Emotional intelligence (EI) is a crucial skill for school administrators as it enables them to understand, regulate, and manage their emotions and those of others to create a positive and productive school environment. Developing emotional intelligence among school administrators is essential for improving leadership effectiveness, fostering positive relationships, and enhancing overall school performance. Administrators who possess high emotional intelligence are better equipped to handle stress, resolve conflicts, and create a supportive atmosphere where teachers and students thrive (Ofoegbu, 2014).

SCHOOL ADMINISTRATORS CAN DEVELOP EMOTIONAL INTELLIGENCE BY DOING THE FOLLOWING:

Self-Reflection and awareness

Self-reflection and self-awareness are fundamental ways through which school administrators exhibit emotional intelligence (EI) in managing schools effectively. For school administrators, emotional intelligence is essential for effective decision-making, conflict resolution, and fostering a positive school environment. Self-reflection and awareness enable administrators to understand their emotional triggers, strengths, and weaknesses, which enhances their capacity to respond thoughtfully to challenges and build strong relationships with staff and students (Adeyemo, 2013). Administrators who engage in regular self-reflection are more aware of their emotional states and how these emotions influence their decisions and interactions.

Self-awareness allows school administrators to monitor their emotions and assess how their emotional responses affect the school climate. According to Salami (2013), emotionally intelligent school leaders who demonstrate self-awareness are more likely to make balanced decisions and handle conflicts effectively. For example, when an administrator recognizes feelings of frustration during a conflict, self-awareness enables them to pause, reflect, and respond calmly rather than react impulsively. This measured response fosters a sense of stability and trust within the school community. Self-awareness also helps administrators understand their leadership style and how it impacts staff morale and student motivation. When leaders are conscious of their strengths and weaknesses, they are more open to feedback and willing to adapt their approach to meet the needs of the school (Akinbote, 2014).

Self-reflection enhances emotional intelligence by allowing school administrators to learn from past experiences and improve their emotional responses. Reflection provides an opportunity for administrators to evaluate the effectiveness of their decisions, identify patterns in their emotional behavior, and develop strategies for improvement. Ofoegbu (2014) noted that school administrators who regularly engage in self-reflection demonstrate higher levels of adaptability and problem-solving skills. Administrators can identify more effective ways to communicate with staff and students, resolve conflicts, and motivate positive behavior by reflecting on difficult situations. Reflection also encourages administrators to seek feedback from colleagues and staff, which strengthens trust and collaboration within the school environment. Developing self-awareness through self-reflection also enhances administrators' ability to empathize with others. When administrators understand their emotional responses, they are better positioned to recognize and respond to the emotional needs of teachers and students. Oladipo et al. (2015) found that emotionally intelligent school leaders who practice self-reflection and awareness are more effective in building positive relationships, reducing staff turnover, and improving student outcomes. This capacity to empathize and respond thoughtfully contributes to a supportive and productive school culture where both staff and students feel valued and understood.

Active Listening

Active listening is a fundamental way school administrator's exhibit emotional intelligence (EI) by fostering effective communication, building trust, and enhancing problem-solving within the school environment. Active listening, which includes paying full attention to the speaker, understanding their message, and responding thoughtfully, reflects the capacity of emotionally

intelligent administrators to engage with others meaningfully. When school administrators practice active listening, they demonstrate empathy, improve decision-making, and create an atmosphere of mutual respect and cooperation (Goleman, 2011). Active listening enhances communication between school administrators and stakeholders, including teachers, students, and parents. Administrators who listen attentively to teachers' concerns and suggestions create an environment where staff feel valued and supported. This fosters trust and encourages open dialogue, leading to better collaboration and shared problem-solving. According to Adeyemo (2013), school administrators who practice active listening are more likely to build strong professional relationships and maintain a positive school climate. Administrators validate the perspectives of others, which enhances morale and motivation among staff and students by listening without interrupting and acknowledging the speaker's feelings.

Active listening also plays a critical role in conflict resolution within the school setting. Disputes between teachers, students, or staff members often arise from misunderstandings or miscommunication. School administrators who listen actively during conflict resolution sessions create a safe space for parties to express their viewpoints and emotions without fear of judgment. Ofoegbu (2014) found that schools with administrators who practiced active listening reported lower levels of conflict and increased levels of cooperation among staff and students. Through active listening, emotionally intelligent administrators can identify the root causes of conflict, mediate effectively, and foster reconciliation.

Furthermore, active listening strengthens decision-making and strategic planning in schools. Administrators who seek input from teachers, students, and parents through active listening are more likely to make informed and balanced decisions that reflect the needs of the school community. Akinbote (2014) argues that school leaders who engage in active listening are better positioned to anticipate challenges, adapt to changes, and implement effective solutions. Listening actively to feedback and suggestions allows administrators to identify gaps in policies and adjust strategies to improve school outcomes.

Empathy

Empathy, as a key component of emotional intelligence, involves the capacity to understand and share the feelings of others. For school administrators, empathy enhances communication, builds trust, strengthens relationships, and improves decision-making within the school environment (Goleman, 2013). When administrators demonstrate empathy, they create a supportive atmosphere where teachers, students, and parents feel valued and understood, which enhances overall school performance and harmony (Adeyemo, 2013). Empathy allows school administrators to build strong and positive relationships with teachers and staff. Administrators who actively listen and respond to the emotional needs of their staff create a culture of trust and mutual respect. According to Akinbote (2014), school leaders who demonstrate empathy are more likely to motivate teachers and improve job satisfaction. When teachers feel that their challenges and achievements are acknowledged, they are more committed to their work and more likely to adopt innovative teaching methods. For example, an empathetic administrator who recognizes a teacher's struggle with classroom management can provide targeted support and training, leading to improved teaching effectiveness.

Empathy also plays a critical role in student welfare and performance. Administrators who understand the emotional and academic needs of students are better equipped to create a conducive learning environment. Oladipo et al. (2015) maintained that students perform better

academically and socially when they feel emotionally supported by school leaders. When an administrator notices a student struggling with personal or academic issues, showing empathy by listening and offering support helps the student feel understood and motivated to overcome challenges. This emotional connection fosters a sense of belonging and increases student engagement and motivation.

Conflict resolution is another area where empathy enhances school administration. Disputes between students, teachers, and staff are inevitable in any school setting. An empathetic administrator is able to mediate conflicts by understanding the perspectives of all parties involved and finding solutions that address their emotional and practical needs. Ofoegbu (2014) noted that school administrators who demonstrate empathy in conflict resolution are more successful in fostering collaboration and reducing tensions. Administrators create a peaceful and cooperative school environment by acknowledging the feelings of those involved and responding with fairness and understanding.

Empathy also improves decision-making among school administrators. When making decisions, empathetic administrators consider how their choices will impact the emotional and professional well-being of staff and students. Salami (2014) found that emotionally intelligent administrators who practice empathy are more likely to implement policies that reflect the needs and concerns of the school community. This thoughtful and inclusive decision-making process increases acceptance and cooperation among staff and students.

Feedback

The way administrators give and receive feedback reflects their emotional awareness and capacity to navigate interpersonal relationships. Feedback, when delivered effectively, serves as a tool for professional growth, relationship building, and the promotion of a collaborative school environment. Administrators who exhibit emotional intelligence through feedback demonstrate key EI components such as self-awareness, self-regulation, empathy, and social skills. Self-awareness enables administrators to recognize their emotional responses when receiving feedback and to assess their leadership performance objectively. For instance, acknowledging one's strengths and weaknesses through feedback allows administrators to adjust their leadership approaches and address any identified gaps. This process fosters a culture of continuous improvement and reflective practice among school staff (Goleman, 2017).

Self-regulation, another core aspect of emotional intelligence, is evident when administrators remain calm and receptive to feedback without reacting defensively. The ability to manage emotions in the face of criticism demonstrates maturity and a commitment to professional growth. Administrators who respond thoughtfully to feedback create an environment where teachers and staff feel safe expressing their concerns and suggestions. This dynamic encourages open communication and trust, essential elements for effective school administration (Mayer et al., 2016). Empathy is reflected in the manner administrators deliver feedback to staff and students. Providing feedback with sensitivity to the emotional state and perspective of the recipient increases the likelihood of a positive response and subsequent improvement. Empathetic administrators adjust their communication style to the individual needs of their staff, reinforcing a supportive atmosphere that enhances motivation and job satisfaction (Brackett et al., 2019). Furthermore, social skills, including effective communication and conflict resolution, play a significant role in feedback delivery. Administrators who use positive language, active listening, and constructive criticism help staff feel valued and

understood. This approach strengthens professional relationships and promotes teamwork within the school community (Boyatzis et al., 2017).

Feedback-driven emotional intelligence also contributes to improved decision-making and problem-solving. Administrators who integrate feedback into their decision-making processes demonstrate adaptability and responsiveness to the needs of their schools. This approach enhances staff performance, student outcomes, and overall school effectiveness. In conclusion, feedback is not merely a tool for evaluation; it reflects an administrator's emotional intelligence by promoting self-awareness, self-regulation, empathy, and social skills. Through thoughtful and emotionally intelligent feedback, school administrators cultivate a positive, collaborative, and high-performing educational environment.

Training and Development

Administrators who prioritize training and development demonstrate self-awareness, self-regulation, empathy, and social skills, thereby creating a supportive and high-performing school environment. Through training and development, administrators not only enhance the professional competencies of staff but also foster a culture of continuous improvement and emotional support. Administrators can design and implement training programs that address specific areas for improvement by recognizing these needs. This reflective approach demonstrates a high level of emotional intelligence, as it involves acknowledging one's limitations and taking proactive steps to enhance leadership effectiveness (Goleman, 2017). Furthermore, self-regulation is evident when administrators manage the challenges and emotional demands associated with organizing and facilitating training programs. Effective administrators remain composed and solution-focused, even when faced with resistance or logistical difficulties, thereby modeling emotional resilience for their staff (Boyatzis et al., 2017).

Empathy is a critical element in the design and delivery of training and development programs. Administrators who understand the emotional and professional challenges faced by their staff can tailor training initiatives to meet these specific needs. For instance, providing targeted professional development on classroom management, mental health awareness, or technological integration reflects an administrator's sensitivity to the evolving demands of the educational environment. Empathetic administrators ensure that training sessions are not only informative but also supportive, reinforcing the staff's sense of value and belonging (Brackett et al., 2019). Social skills play a vital role in facilitating effective training and development. Administrators with strong interpersonal abilities can communicate the importance of training, motivate staff participation, and foster collaborative learning environments. The ability to engage staff, resolve conflicts, and encourage open dialogue during training sessions reflects an administrator's capacity to build trust and strengthen professional relationships (Mayer et al., 2016). Additionally, training and development initiatives that encourage peer collaboration and feedback contribute to a culture of teamwork and shared responsibility.

CONCLUSION

Emotional intelligence (EI) plays a pivotal role in the effective administration of public secondary schools in Nigeria. Administrators who possess and apply emotional intelligence are better equipped to navigate the complex interpersonal and organizational challenges inherent in the educational system. The ability to understand, manage, and regulate emotions enhances

decision-making, communication, conflict resolution, and overall leadership effectiveness. Self-awareness enables administrators to reflect on their leadership style and identify areas for improvement, thereby fostering a culture of continuous learning and growth. Self-regulation ensures that administrators remain composed and objective when handling difficult situations, which strengthens trust and respect among staff and students.

Empathy is a key factor in building strong relationships within the school community. Administrators who demonstrate empathy understand the emotional and professional challenges faced by teachers, students, and parents, allowing them to provide appropriate support and guidance. This fosters a positive school climate where individuals feel valued and motivated to contribute to the collective goals of the institution. Furthermore, social skills, such as effective communication, teamwork, and conflict resolution, enable administrators to build a cohesive and collaborative work environment. Open communication and mutual respect between administrators and staff improve overall school performance and student outcomes.

Emotional intelligence also enhances decision-making by helping administrators remain calm under pressure and consider multiple perspectives before arriving at solutions. Administrators with high EI are more adaptable to change and better able to implement strategic initiatives that align with the school's vision and goals. In a dynamic and often challenging educational environment, emotional intelligence provides the foundation for resilience, innovation, and long-term success. Ultimately, the role of emotional intelligence in the administration of public secondary schools in Nigeria cannot be overstated. It is a critical determinant of leadership effectiveness, staff motivation, student achievement, and overall school improvement.

Suggestions

For school administrators to develop emotional intelligence in effective administration of public secondary schools in Nigeria, the following suggestions are made:

- School administrators should undergo regular training on emotional intelligence to enhance their self-awareness, self-regulation, empathy, and social skills. This will improve their ability to manage emotions, communicate effectively, and build stronger relationships with staff, students, and parents.
- Administrators should create a culture of open communication where teachers and students feel comfortable expressing their concerns and suggestions. Encouraging feedback helps administrators understand the emotional and professional needs of the school community, leading to more informed and empathetic decision-making.
- Administrators with high emotional intelligence can effectively resolve conflicts by understanding the emotional drivers behind disputes and addressing them constructively. Implementing structured conflict resolution programs can help maintain a harmonious school environment and foster mutual respect.
- Administrators should organize team-building activities and collaborative projects to strengthen relationships among staff and students. Emotional intelligence helps administrators recognize and leverage the strengths of individuals, creating a cohesive and supportive school culture.
- Administrators should implement programs that promote mental health and emotional well-being for both staff and students. Providing counseling services, stress management

workshops, and peer support groups can help address emotional challenges and create a more supportive learning environment.

ABSTRACT

The paper examined awareness of child rights act for effective leadership in secondary schools in Nigeria. Awareness and enforcement of child rights enhance a leader's credibility and legitimacy among staff, students, and parents. It fosters trust and strengthens stakeholder relationships. When school leaders understand the Child Rights Acts, they are better equipped to create a safe, inclusive, and child-friendly school environment. This involves implementing policies that prevent bullying, corporal punishment, and discrimination. Awareness and enforcement of child rights enhance a leader's credibility and legitimacy among staff, students, and parents. School leadership knowledge of child rights acts provides a moral and legal compass for school leaders, helping them make informed and ethical decisions that prioritize the best interest of the child. The paper concluded that school leaders' awareness of child rights acts ensures the effective management of situations between students, or between students and teachers which reduces incidences of abuse and promotes peaceful coexistence in the school environment. The paper further suggested that Ministries of Education and teacher training institutions should include Child Right Acts in leadership development programs for principals and educational administrators, and regular capacity-building workshops should be organized for school staff on the provisions and implications of the Child Right Acts to ensure effective leadership in secondary schools.

Keywords: Child, Child Right Acts, Awareness, Leadership, Fundamental Human Rights.

INTRODUCTION

Children are considered as treasurable gifts from God. It is somewhat curious and disastrous that these same children are exposed to, maltreated, abused and neglect. Children have the right to partake in decisions and policies that may have effect on their lives, survival, improvement and development and right to be protected. Perhaps it is in acknowledgement of this reality and fact that Thompson (1992) explained that children's rights have gained world attention since 1979, when the United Nations designated that year as the Global Year of the Child and developed a list or record of child's rights. Child Rights are fundamental and basic freedoms and the essential rights of all humans below 18 years. Atonuje (2011) observed that the violation of child rights

takes different and numerous forms such as imposition of too much punishment (corporal punishment), refutation of students‟ access to learn, sexual abuse and harassment by teachers of opposite sex, cruel treatment of student, imposition of illegitimate or illegal fees and levies among others. These rights apply to all children, regardless of the child's parent's/legal guardian's, sex, race, colour, religion or other position/status.

Article 4 (1) of the African Charter on the Rights and Welfare of a Child provides that "in all actions concerning the child undertaken by any person or authority, the best interests of the child shall be primary consideration". This provision has been entrenched by Section 1 of the Child Rights Act 2 in our law, which provides that "in every action concerning a child, whether undertaken by an individual, public or private body, institutions of service, court of law, or administrative or legislative authority, the best interest of the child shall be the primary consideration". A replica of the provision is also found in Article 3 (1) of the Convention on the Rights of the Child. The fact that the CRC has been ratified by almost all the member States of the United Nations Organization, the "best interest of the child" principle would appear to be the norm presently, both internationally and otherwise. A consensus on the phrase is one thing but how to actualize it, is the more important. It involves determining what is the best interest of the child in every conceivable situation, entrenchment through positive legislation and the issue of enforcement. More so, the fact that the best interest of the child "shall be a primary consideration" in the decision affecting the child is an indication that it will not always be the single, overriding factor to be considered, but in the administration of justice, there may be competing or conflicting human rights interest; for instance, between children, different groups of children and between children and adults.

For Njoku and Oladiji (2009), the challenges facing children in the 21st century are immense and will need to be faced if we are to achieve the goal of the Child‟s Rights Act. In putting into practice child rights, teachers are considered to be the "chief implementers". This shows that teachers are capable of making their own contributes to the implementation of the child rights (Ertmer, 2005). Changing teachers' opinion of the child rights rest upon some changes or transformation in teachers' knowledge, attitudes, beliefs, and practices (Fullan & Stiegelbauer, 1991). These attitudes and this knowledge then have an impact on classroom activities which, at the same time, have an effect on the successful or efficacious implementation of the child right curriculum in practice. Lots of studies have paid attention and concentrated on the role of teachers as human rights educators who understand the issues, create learning environments premised on human rights principles, serve as role models for students and inspire them to act and behave in ways that recognise the principles of human rights (Osler & Starkey, 2010 and Jennings, 2006). Ahsan & Burnip (2007) suggested that teachers are not willing to teach the fundamental rights of the child. Harding & Darling (2003) argued that teachers' views are important in making any change in their classroom practices. This suggests that the view of teachers about child rights may influence their capability and skills to adapt, including their classroom performance in the teaching and learning process. This is because teachers are the ones that work very closely with the pupils (Burke & Sutherland, 2004), and the classroom philosophy and environment are shaped by teachers‟ perception and teaching styles (Charema & Peresuh, 1996). The child rights are actually the human rights (UNCRC).

The school is another place where children rights are required to be provided and protected after home, therefore after parents, teachers must focus on child rights and they should try to ensure the requirement related with child rights at school. In order to defend and taking care of the children rights, there is dire need to explore an understanding of teacher's knowledge,

attitude and practice about child rights at secondary schools. The practical implementation of policies regarding child rights in school is the major issue which is needed to take immediate attention of all stakeholders specially, teachers. To measure sensitivity level about knowledge, attitude and practice of teachers working with young children at schools is a serious policy discourse.

However, it has been observed that there is unwillingness on the part of teachers to teach the fundamental rights of the child. The perception or views of teachers' is very important and a key factor in bringing any change in their classroom practices. This suggests that the perception, sensitivity and feeling of teachers about child rights may influence their ability to adjust, and their classroom teaching of child rights. Teacher's perception can also affect the success/fruitful implementation of the curriculum on the child rights. These existing views or opinion of teachers of the child rights may not relate to their classroom practices and with the real world issues. It is based on this fact that this paper examined awareness of child rights act for effective leadership in secondary schools in Nigeria.

METHODOLOGY

This paper employs a qualitative research design, relying on secondary data sources, including journal articles, government reports, policy documents, and legal frameworks. The paper critically examines existing literature on the Child Rights Act (CRA), its implementation in Nigerian secondary schools, and its implications for school leadership. The paper uses document analysis as the primary data collection method. Relevant materials were sourced from, The Child Rights Act (2003) and its adoption status across Nigerian states, Nigerian educational policies on child protection and rights, scholarly articles from peer-reviewed journals (2009–present) discussing child rights awareness and school leadership, reports from international organizations (e.g., unicef, unesco) on child rights education in Nigeria. A content analysis approach was adopted to systematically examine themes related to; Awareness levels of secondary school leaders regarding the Child Right Acts, the role of school leadership in enforcing child rights, challenges and strategies for effective Child Rights Acts implementation in schools. This paper focuses on secondary schools in Nigeria, analyzing how principals, teachers, and school administrators understand and implement child rights within their leadership practices and does not include primary schools or higher education institutions. Since this paper is based on secondary data, there is no direct interaction with human participants. However, ethical research practices were upheld by ensuring proper citation and adherence to intellectual property rights. This methodological approach ensures a comprehensive review of existing literature, providing a strong foundation for advocating enhanced awareness and implementation of the Child Rights Act in Nigerian secondary schools.

THEORETICAL FRAMEWORK

This paper anchored on Expectancy Violation Theory by Jude Burgoon in 1978 as cited in Ejeh (2015).

Expectancy Violation Theory

This theory was propounded by Judee Burgoon in 1978. The theory attempts to explain one's reactions to unexpected behaviour of their peers, and the various meanings that people attribute

to the violation, or infringement, of their personal space. Expectancy is what people predict will happen, rather than what they desire. A violation is a breach, infringement, or transgression as a law, rule, and promise. This implies that expectancy violation is a breach or violation of a person's prediction. This theory sees communication as the exchange of information that is contented and can be used to violate the expectation of another who will perceive the exchange either positively or negatively depending upon the liking between the two people.

Expectancies are primarily based upon social norms and specific characteristic of the communicator. Expectancies can come directly from the current interaction but are often formed by a person's initial stance determined by a blend of person requirements (biological/survival needs), expectations (normative schemata) and desire (likes and dislikes) or "RED". This is known as a person's interaction position. Such violation of expectancies cause arousal and compel the recipient to initiate a series of cognitive appraisals of the violation. This theory proposes that expectancy will influence the outcome of the communication as positive or negative and predicts that positive violations increase the attraction of the violator and negative violations decrease the attraction of the violator. The relevance of this paper to the study is that school administrators should be aware of Child Rights Acts to ensure the absence of violation of the students' rights and adequate protection of child rights for the effective achievement of set educational objectives as well as creating healthy school climate for effective student's management.

CONCEPTUAL CLARIFICATION

Concept of a Child

Looking at the Constitution of the Federal Republic of Nigeria, one cannot find any definition of "a child". Black's Law Dictionary defined a child as a person under the age of majority. The Labour Act defines a child as a young person under the age of twelve years and a young person as one under the age of fourteen years. The Children and Young Person's Act,9 defined a child as a "person under the age of fourteen years and a young person to mean " a person who has attained the age of fourteen years and is under the age of seventeen years. The African Charter on the Rights and Welfare of the Child defined a child as "every human being below the age of eighteen years" The United Nation's Convention on the Rights of the Child defines a child as a person below the age of eighteen years except in the law applicable to the child, the age of majority is attained earlier. The provision to this definition renders it nothing more than a suggestion. According to Section 277 of the Act, a child is a person below the age of eighteen years. It must be noted that the legislation on issues concerning children in Nigeria is in the residuary legislative list and as such depends on the States. Individual States are meant to adopt and adapt the Child Rights Act. Most States of the Federation like Abia, Anambra, Bayelsa, Ebonyi, Edo, Ekiti, Imo, Jigawa, Kwara, Lagos, Nassarawa, Ogun, Ondo, Rivers, Taraba, have adopted the Child Right Acts (CRA). In the process of adapting, some states have changed the definition of "a child". In some States, a child, is a young person under the age of thirteen years. In other States like Akwa Ibom State, he/she is a young person under the age of sixteen years. The writers are of the view, that the perception of age as a definition of a child in Nigeria, depends on who is defining and varies according to cultural background. Furthermore, the lack of a comprehensive definition that is applicable throughout the nation, is an all encompassing handicap with regard to the just application of the provisions of the law.

Child Right Act

The disintegration of Soviet Union in 1991 and the eventual emergence of the United States of America as the world power heralded the International campaign for Liberal democracy in all nations of the world. America's emergence as the world police intercepted the world balance of power and consequently empowered America to advance her foreign policy and national interest across Africa, Europe, Asia and the Middle East. The Child Rights Act therefore, is a brainchild of the United States of America which they pursue through the instrument of United Nations (U.N). According to Olakanmi (2007), the Child Rights Act was inspired by the Universal Declaration of Human Rights (UDHR) which was promulgated on December 10, 1948 through the General Assembly of the United Nations. Sequel to this historic event, the Assembly called upon all member countries to publicize the text of the Declaration and "to cau/se it to be disseminated, displayed, read and expounded principally in schools and other educational institutions, without distraction based on the political status of countries or territories".

In the preamble of the Declaration as stated by Olakanmi (2007), it reads that whereas recognition of the inherent dignity and the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world. On 2oth November 1989, the United Nations General Assembly adopted the convention on the Rights of the child (CRC), while the Organization of African Unity (OAU) Assembly of Heads of States and Government also adopted the African Union charter on the Rights and welfare of the Child in July, 1990 (Obiaraeri, 2012).

The Federal Republic of Nigeria as a member state of the United Nations signed the convention and international instruments and ratified them in 1991 and 2000 respectively. To Obiaraeri in Nnorom (2015), both international instruments contain universal set of standards and principles for survival, development, protection and participation of children. It reflects children as sacred human beings as total subjects of their own inalienable rights. Nigeria has by a decision duly reached in accordance with its constitutional processes, agreed to ratify the U.N's convention on the rights of the child. In the words of former Nigerian Military President in the 21st day of March, 1991, it is revealing that the Child Rights Act arrived the shores of the country in a grand style.

Now therefore, I, General Ibrahim Badamasi Babangida, President, commander-in-Chief of the Armed forces of the Federal Republic of Nigeria, on behalf of the Federal Military Government of the Federal Republic of Nigeria do hereby ratify the aforesaid United Nations convention on the Rights of the Child, the text of which was adopted on the 20th day of November, 1989. In witness whereof, I have hereunto set my hand and caused the seal of the Federal Republic of Nigeria to be affixed to these present.

In a bid to domesticate the convention on the Rights of the Child, the Child Rights Act was given birth to. The convention mandates that countries who are signatories should vigorously disseminate the convention's principles and take all appropriate legislative, administrative and other measures for the implementation of the Rights recognized as the present convention. Ten years after, several heads of government came and went, there were heated debates among parliamentarians which resulted to the eventual passing of the Child's Rights Bill into law in July, 2003. It was assented to by the president of the Federal Republic of Nigeria, Chief Olusegun Obasanjo in September 2003 and promulgated as the child's right act, 2003.

Awareness

Awareness is the state of consciousness, wakefulness and knowledge of something. It believed that the awareness of one type of idea or issue naturally fosters an awareness of another idea. Awareness as defined by Rotolito (2009) is knowledge or understanding of a particular subject or situation. It could be an awareness of the environment, politics and social situation. It is also the ability to notice something using one's senses, and the attribute of action. Doing one thing while taking heed of other relevant occurrences are not two parallel lines of action but a specific way of pursuing lines of action, namely to do it heedfully, competently, mindfully, accountably. Here awareness does not refer to some special category of mental state existing independently of action but to a person being or becoming aware of something. Schmidt (2002) sees awareness as an "integrated aspect of practice and must be investigated as such". Stressing further he state that it is the state or ability to perceive, to feel, or to be conscious of events, or sensory patterns. More broadly, it is the state or quality of being aware of something, while biologically it is defined as a human or an animal's perception and cognitive reaction to a condition or event.

Child Rights Provision and Protection

Any human being under age of 18 years, provided any state law applicable fall in the category of Child. Legally a child is considered as minor being younger than the age of majority (Cangelosi, 2015). Protection of human rights means to ensure that people are enjoying the entitlements of decent human living. Provision of human rights facilitative environment is the core function of any state and also protect human rights as basic civic principle. States should make laws to ensure equal opportunities of human rights, which will not only provide the structural, legal platform for the citizens but also will pave a path of human rights supportive culture. It is the state function to maintain, preserve and protect the life of people through human rights violators. However, it is observed that many Governmental Organizations and Non-Governmental Organisations are taking part in the protection of people's human rights. In any society, every human being has an obligation to respect the others rights, which calls for protection and sanctions for violations (Bajpai, 2018).

Child rights and adult rights seems different terms but these are human rights and sides of one coin. Being vulnerable part of society, children have specific rights which help children to maximize their full potential. In society, children must not be considered as helpless, deserve for charity or property family. A child is part of family and community having specific rights and responsibilities at developmental stage. Children should enjoy the minimum standard of life (basic human rights principles) rather than privileges (CRC, 2006). Every child irrespective of gender and age is unique in character and has equal importance in terms of human dignity and respect. Moreover, children must be given opportunity to share in all matters and decisions. Children must be listened to and the opinion of every child on serious matters should be respected (CRIN, 2007).

Child protection means to protect the children from violent behavior, mistreatment, cruelty and neglect. There are several terms like abusive and ill-treatment with the children or vehemence are rotating in the society and all are used to refer physical, sexual, spiritual and emotional abuse. The basic aim of child protection to provide a shelter and safe guard from all above mentioned forms to the victim segment of the society and to develop human dignity in all settings despite any race, society, department, under private or government authority in the result

of carelessness or consciously. CRC had already been chalked out various means to make sure the child protection from all the above mentioned forms of abuse, violence and neglect especially in the Article 19 (Richardson, 2017). The Convention was enforced in 1990 under Human Rights Chapter IV, in accordance with article 49(1) (UNCRC). There are 140 signatories‟ States while 197 gave ratification, acceptance, accession and/or succession of Convention (UNCRC). In research literature, rights in UNCRC are categories into three main parts, known as the „3 P‟s‟: provision of basic needs (e.g. food, services relating to education, health, leisure etc.), protection (against harmful acts or practices, social or emotional abuse) and like adults, children participation in communities (Munro, 2015). Teachers‟ role cannot be ignored as teacher is the second important stakeholder after parents who inspire the child in promoting value system and sense of Child rights in students. In Pakistan, the frequency of child abuse, neglect, exploitation and violence has increased a lot as compared in past in Pakistan (Memon, 2007).

Leadership

Leadership is of huge importance in management and educational administration because of its far-reaching effect on the accomplishment of educational goals. Because of its key role in the success or failure of organizations, leadership has long been a focus of study by students, theorists, researchers and practitioners, particularly in the last five decades. Leadership means inspiring people to do their best to achieve a desired result. According to Nwabueze, et al., (2017), leadership is the ability to successfully integrate and maximize available resources, within the internal and external environments for the attainment of institutional or national goals. Armstrong (2012) asserts that, leadership involves developing and communicating a vision for the future. A leader is someone who directs, organizes, controls and manages the activities of an organization aimed at achieving the goals and objective of that organization. Leadership plays an important role in the outcome of any organized effort aimed at achieving a particular goal or set of goals. It determines the quality of process and output of the educational system to the extent that, without it, goals may be difficult to achieve. Leadership can be seen as a process by which individuals at the helm of affairs, change the minds of others, with the intention of moving their institutions forward towards accomplishing specified goals and objectives (Nwabueze, et al., 2017). Leadership positions are practiced by those who are at the helm of affairs in the school system known as ‘leaders’.

Educational leaders are charged with the task of handling administrative and academic matters with transparency in schools for productivity and institutional development. It is in this wise, that Ololobe (2024) opined that leaders should lead by example by demonstrating responsible behavior in their own actions. A leader is an administrator who oversees the activities of a group, motivating them to achieve organizational objectives. In this regard, it is the duty of the leaders to initiate, organize, motivate and direct the activities of the teachers and students to achieve set goals. They attract voluntary commitment from followers, energize them and transform institutions into new entities with greater potential for growth, excellence and global competitiveness. Before one can be a good leader, he must first learn to be a great follower. This implies that the best leaders are those who have served many apprenticeships in the school system. However, the strength of any institution is a direct result of the strength of its leaders as well as their functional performances.

The leader administers the school with teaching and non-teaching activities for institutional growth and improvement. They perform their duties by providing the right kind of

leadership to effect the kind of climate which is conducive for teaching, learning and development of teachers and students (Ukala, et al., 2017). In order words, to produce an effective school with excellent academic achievement, there is the need for effective and excellent leadership for effective administration of schools and quality service delivery. This implies that, every organization needs an effective leader to achieve its goals. Leaders help the organization to do things at the right time. They set direction, build an inspiring vision and crate something new for the achievement of institutional goals and objectives. Leadership is all about working as a team to create dynamic, exciting and inspiring programmes for organizational competitiveness. While leaders set the direction and build an inspiring vision, they must possess leadership skills in order to guide subordinates to the right destination in a smooth and efficient way.

Leadership plays an important role in the outcome of any organized effort aimed at achieving a particular goal or set of goals. It determines the quality of process and output of the educational system to the extent that, without it, goals may be difficult to achieve. Leadership can be seen as a process by which individuals at the helm of affairs, change the minds of others, with the intention of moving their institutions forward towards accomplishing specified goals and objectives (Nwabueze, et al., 2017). Leadership positions are practiced by those who are at the helm of affairs in the school system known as 'leaders'.

Educational leaders are charged with the task of handling administrative and academic matters in schools for productivity and institutional development. A leader is an administrator who oversees the activities of a group, motivating them to achieve organizational objectives. In this regard, it is the duty of the leaders to initiate, organize, motivate and direct the activities of the teachers and students to achieve set goals. They attract voluntary commitment from followers, energize them and transform institutions into new entities with greater potential for growth, excellence and global competitiveness. Before one can be a good leader, he must first learn to be a great follower. This implies that the best leaders are those who have served many apprenticeships in the school system. However, the strength of any institution is a direct result of the strength of its leaders as well as their functional performances.

The leader administers the school with teaching and non-teaching activities for institutional growth and improvement. They perform their duties by providing the right kind of leadership to effect the kind of climate which is conducive for teaching, learning and development of teachers and students (Ukala, et al., 2017). In order words, to produce an effective school with excellent academic achievement, there is the need for effective and excellent leadership for effective administration of schools and quality service delivery. They set direction, build an inspiring vision and crate something new for the achievement of institutional goals and objectives. Leadership is all about working as a team to create dynamic, exciting and inspiring programmes for organizational competitiveness (Ukala, et al., 2017). While leaders set the direction and build an inspiring vision, they must possess leadership skills in order to guide subordinates to the right destination in a smooth and efficient way.

Fundamental Human Rights

Fundamental human right has become a global issue. The fundamental rights are generally regarded set of legal protections in the context of legal system, wherein such system itself is said

to be based upon this same set of basic, fundamental or inalienable "rights." Such rights thus belong without presumption or cost of privilege to all human beings under such jurisdiction. The concept of human right has been promoted as a legal concept in large part owing to the idea that human beings have such "fundamental" rights, such that transcend all jurisdictions, but are typically reinforced in different ways and with different emphasis within different legal system. According to Ukegbu, et al., (2012) fundamental human right are the basic natural rights which are essential for human existence and every citizens is entitled to them and is expected to enjoy them in full without hindrance or discrimination. The Nigeria constitution has several articles as fundamental rights of man. They include: The right to life, right to dignity of human person, the right to personal liberty, the right to fair hearing as well as right to peaceful assembly Nwandike and Kalu (1998).

Akande (1982) also maintained that fundamental rights are better backed up by the constitution of the land and argues that the theory of constitution as a superior law is well known. The courts apply the constitution as law to the cases before them but they do not enforce any law which, in their opinion is forbidden by the constitution. Mejieobi (1994) reported that certain right are perceived as sacrosanct, basic divine, natural and fundamental to the very existence of man in a civilized society and therefore be deprived or subjected to reckless abuse or infringement. This has made the attainment of equal rights to remain a constant struggle. The existence, validity and content of human rights continue to be the subject of debate in philosophy and politic. However it is defined in both domestic and international laws, and there is a great variance between how human rights norms are perceived and defined in various ways both in context and how they are upheld in different countries of the world.

In addition, the concept of human rights deals with small subset of values that should be available for implementation by individuals or government. These values are clearly stated in the constitution and are based on the legal and political traditions of every country including Nigeria. It is not a thing of surprise therefore that the Nigerian constitution, contains fundamental rights which constitute inalienable and supreme rights of the individuals. Human rights are generally regarded as a set of entitlements in the context of a legal system, where in such system it is said to be based upon this same set of basic, fundamental, or inalienable entitlements or rights. Such rights thus belong without presumption or cost of privilege to all human beings under such jurisdiction, but are typically reinforced in different ways and with different emphasis within different legal systems.

In countries like Canada, the Charter of Right and Freedoms outlines four fundamental freedoms as freedom of conscience and religion, freedom of thought, belief, opinion and expression, press and other media of communication and freedom of peaceful assembly and freedom of association. Also in the United States, fundamental rights have special significance under the 14th Amendment to the constitution. Thus, all human beings are endowed by their creator with certain inalienable rights, among these being Rights to life, liberty and the pursuit of happiness. In Nigeria also, as earlier noted by the researcher, sections 32-42 of chapter IV of the 1999 Constitution of the Federal Republic of Nigeria, is enshrined the fundamental human rights of the citizens (FRN, 1999). From these various points of view, fundamental human rights are the basic universal inalienable rights which should be enjoyed by all human beings regardless of their religion, race, ethnic, gender and status. In other words, fundamental human rights are rights that belong to all as human beings and citizens of a country. The concept is held inalienable and belongs to all human and that is why rights are clearly written in the constitutions of nations.

Salient Provisions of the Child Rights Act

The following are salient elements of the child rights act although they are not all-encapsulating owing to the fact that the fundamental human rights which envelop the Child Rights Act are part of the infinite political salience:

- Right to a name, acquire Nationality and as far as possible, the right to know and be cared for by his or her parents.
- Right to preserve identity, nationalism, family and relation as recognized by law without unlawful interference.
- The child should have the right to form his or her own views and the right to express those views freely in all matters affecting the child.
- The Right to freedom of expression: This right shall include freedom to seek, receive and impart information and ideas of all kinds, regardless of funtiers, either orally in writing or in print, in the form of art, or through any other media of the child's choice.
- Right to freedom of association and to freedom of peaceful assembly.
- Right to freedom from arbitrary or unlawful interference with his or her privacy, family, home or correspondence, nor to unlawful attacks on his or her honour and reputation.
- Right to protection from all forms of physical or mental violence, injury or abuse, neglect or negligent treatment, maltreatment or exploitation including sexual abuse, while in the care of parent(s), legal guardian(s) or any other person who has the care of the child. Right to free, compulsory and universal primary education
- Right to leisure, recreation and cultural activities Right of the unborn child to protection against harmful social and cultural practices. Right to freedom from discrimination
- Right not to be imprisoned with the mother Freedom from buying, selling, hiring of children for purpose of begging, hawking, prostitution or for unlawful immoral purposes. Violations of these rights are punishable by long terms of imprisonment. Other rights of the child as contained in the child right act include:
    - Right to freedom from betrothal and marriage of children.
    - Right to freedom from causing tattoos or marks, and female genital mutilation, trafficking of children, use of narcotic drugs or use of children in any criminal activity and employment of children as domestic helps outside their own home or family environment.
    - Freedom from sexual abuse, general exploitation which is considered to be prejudicial to the welfare of the child, recruitment into the Armed Forces and exploitation of children through media publications.

Principals Awareness of Students Discipline for Effective Leadership of Public Secondary

Rules are a set of explicit or understood regulations or principles governing conduct or procedures within particular area, in this context, a schools' regulations are usually more official that rules because they are drawn up by the school board, definite set of standards that must be adhered to at all cost else there will be consequences legal or otherwise (Ndeto, 2013) while Kwayu (2014) opined that rules and regulations are principle or order which guide behaviours in schools and regulations are official rules or orders intended to control the running of the school.

Rules and regulations are often than not school internal law that guide students towards good conduct and behaviour in order to maintain general discipline and order necessary for effective teaching and learning (Peretomode, 2004). Peretomode (2004) went further to state that rules and regulations are meant to guide students towards good conduct and behaviour in order to maintain general discipline for school achievement. School rules and regulation are for the maintenance of peace and orderliness within and among the members of the school community (Maduagwu & Nwogu, 2014). According to Wikipedia (n.d.), school rules and regulations are designed in the best interest of the students and they are meant to keep us and help us to learn in the best environment possible. Like government policies and rules or delegated legislation, school rules and regulations carry the force of the law if they are reasonable and constitutional (Peretomode, 2004). In line with Barrel and Partington (2009), anyone who breaks or flaunts school rules and regulations does so at his or her own risk, the person can be punished as if he or she has broken a common law. Peretomode (2004) Opined that any action on the part of a student that goes contrary to these school rules and regulation is often considered as an offence and an act of indiscipline which attracts disciplinary actions. The effectiveness of school rules according to Gorton as cited in Peretomode (2004) depends of some factors. Three of these factors include:

- Rules and regulations on student behaviour should be stated in positive form as much as possible, and student responsibility rather than misbehaviour should be stressed, The emphasis on student behaviour should be on that which is desired, not on behaviour which unacceptable.
- The policies and procedures governing student behaviour should be written in clear, understandable language and are reviewed from time to time.
- The consequences of violating a rule or regulation should be made explicit and commensurate with the nature of the violation so that student will have the opportunity to take that information into consideration before they violate a rule or regulation.

Teachers are in-charge of the classroom and also held responsible for the safety of students. The main responsibility of the school administrator with regard to classroom activities is to ensure that a teacher is present at all times. Failure to ensure the presence of a teacher in the classroom for the purpose of student supervision could result in students taking advantage of the absence of the teacher to embark on dangerous play or activities that could cause injuries. The school administrator may be charged for negligence for injuries sustained by students in such circumstance. Also, laboratory facilities present more hazards than any other in the school.

The hazards of operating equipment empowered by gas or electricity or the use of chemicals are apparent. It is therefore important that teachers adequately direct students in the care and use of equipment they will be operating. If there is evidence that a student has been permitted or requested to use particular equipment before being trained, negligence will be difficult to disprove. When students are supervised regularly, a negligence charge in the cause of injury is less likely. On the other, if a teacher assigned to a playground leaves the post for no good cause and a student is injured in a known hazardous or dangerous condition, there may be tort liability because of negligence. The school administrator in providing for the organization of playground use has responsibility in three major aspects – first, proper rules of behaviour which is in accordance with good safely practices must be put in place, second, the school administrator

should provide adequate teacher supervision, and third the school administrator should provide for regular inspection of the areas and report any hazardous condition (Ibara, 2010).

Principals Awareness of Students Safety for Effective Leadership in Secondary Schools

Safety is a state of being protected, uninjured, out of danger, secured, not involving risk. All safety directed to the child is to keep him/her alive and secured. In a school environment, every student is entitled to safety from harm, safety from abuse (e.g. rape), safety from disease, safety from malnutrition,safety from hazardous activities, safety from substance abuse and safety from road accidents.

The principal, as the chief teacher in conjunction with the vice principals, senior tutors and other teachers run the school in the frame of law establishing it. These groups of persons who run the school are employed for the purpose of the students who are left in their custody within the period of stay in school. It is to this point that the doctrine of in-loco parents becomes prevalent. The school heads who are the administrators of the school are in their protective custody while in school, and to provide necessary protection for them against any form of oppression, inhuman treatment, torture and several other unfair treatment that will infringe on the rights of the child. The safety of the child in school is a role of the school principal which he must be aware of. Alexander in Igwe (2015) while discussing the role of the school principal in the context of in-loco parentis indicated that the principals or teachers in charge of a public school is subject to the school board and must enforce rules and regulations adopted by the board for the government of the school and execution of all its lawful orders in that behalf.

The principal stands for the time being as a parent to his pupils and due to that relationship, he must necessarily exercise authority over them in many things concerning which the board may have remained silent. It is therefore expected that the school administrators monitor and supervise every activity that is going on in their schools in order to ensure that a child's rights are not violated. Igwe (2015) advocated that the principals and teachers should be properly informed of the constitutional provisions relating to the fundamental rights as well as the legal challenges and implications they pose in the discharge of their responsibilities. Considering this fact, Fayokun and Adedeji (2006) opined that in the conduct of the public schools, it is essential that power vested in school heads in order to maintain discipline and promote efficiency. The right of the school authority has never been in doubt. What has been in doubt is the type and degree of punishment (Arop, 2015).

For the schools to run efficiently there must be laws, rules and regulations. Parents enter into a sort of contract with school authorities by delegating the power of parental control to them, which they expect must be conducted in a manner that will be of the best interest of the children. The school administrators are vested with the responsibilities of planning and coordinating teaching and learning processes in the schools. They perform these intricate tasks with the help of teaching and non-teaching staff in their schools. The human resource or personnel need to have a good general knowledge and understanding of the laws that guide their various actions, especially their relationships with the students. Furthermore, the school administrators must take full responsibility of the actions of their staff on daily basis. This vicarious liability mandates them to be fully aware of the right of a child as declared in the United Nations Conventions and the ones in the Nigerian Constitution. The implementations are to promote and protect the rights and welfare of the students in their schools. They should also ensure that the teachers are aware of these rights and know the legal implications of violating them. Thus, in the course of instilling

discipline in the students, they should be very careful and reasonable, bearing in mind that the students have rights that are being protect by law. Some school administrators are ignorant of educational laws and so abuse their statutory responsibilities and obligations to their students (Arop, 2015).

Nwagwu in Peretomode (1992) succinctly observed that most school administrators and teachers are not aware of the duties, rights, obligations and responsibilities and that many others are ignorant of the rules governing their employment and schools system in which they work. Nwagwu further stressed that school administrators must conduct their affairs with due regards to the human rights of persons under them. Thus, the need for school administrators to be aware of the Fundamental Human Rights enshrined in 1999 Constitution of Federal Republic of Nigeria becomes not only imperative but eminent. Among such rights are: Right to life, Right to dignity of human person, right to fair hearing, Right to Personal Liberty, right to private life, Right to Freedom of Thought, Conscience and Religion, Right to Freedom of Expression and the Press, Right to Peaceful Assembly and Association, right to freedom of movement and Right to Freedom from Discrimination. Therefore, the school administrators should know the law of vicarious liability and be up and doing in order to protect the rights of the students under their custody. Whatever the type of punishment, school authorities must bear in mind that it should be moderate, reasonable and administered in good faith (Abraham, 2013). Arop (2015) succinctly enumerated three cannons which punishment must conform with. These cannons include retributive punishment, reformative punishment and deterrent punishment. Any punishment that lacks all or at least one of these cannons may be tantamount to torture; and therefore violation of students' right to dignity.

According to Nwagwu in Arop (2015), teachers demonstrate an unfortunate destitution of the general principles and provisions of law relating to their noble profession. Nwagwu also stated that perceived power of Omnipotence ascribed to administrators has become nothing but a mere myth. School managers must conduct their affaires with due regards to the human rights of persons under them. There is need for the protection of the right of the child in our schools. This is because high rate of in disciplinary acts have become the order of the day. In bid to control the exuberant nature of students, teachers have devised many disciplinary measures that may infringe on the students' rights. This scenario has serious implications for teaching and learning. The school administrators should be aware that a conducive school climate incorporates the protection and promotion of human rights of persons with the school organization (Arop, 2015).

Principals Awareness of Students Record Keeping and Students Effective Management

Student record is a term that can refer to different types of information collected and stored by educational institutions about a student's academic performance, personal information, and conduct**.** A student record may include permanent records, such as demographic information, courses taken, grades achieved, graduation status, awards, and notations, or temporary records, such as progress reports, transcripts, examinations, appeals, and eligibility for programs. Student record may also be called official student record, official transcript, permanent student record, cumulative record, or student file. Student record is maintained by the student records office or the registrar, and students can access, view, update, or request their student record according to the policies and procedures of the institution.

Record keeping is an important activity in schools. School records are copies of proceedings of actions, events, or other matters kept by the school manager. School records

could be viewed as authentic register or documents of official accounts of transactions or occurrences, which are persevered in the school office. It allows consistency and coherency to be established in the system. It is important to note that every principal in the system is duty bound to keep records of his professional activities. This cuts across, academic and non-academic staff: - teachers, examination officers, admission officers, disciple master, form masters, food masters, games masters, health masters, head of school and their assistants, secretaries, purchasing officers, ministry officials. An innovative principal has the responsibility of seeing to the smooth running of the secondary school. A number of factors are responsible for the extent to which the principal succeeds depends, among others, on the record that he is expected to keep. These records help to provide information about the school, and decision making and assessment of progress of the school. The law requires that some of these records are kept in school while others are not but an innovative principal should keep all records as they are useful in decision making.

An innovative principal must have accurate information to help in assessing meaningful the progress of the school. All school records are important, must be complete and made available when need arises. The principal must ensure that the school records are devoid of exaggerated reports or untrue statements. When records are not kept at one level, it may affect the system at another level. Therefore care should be taken to ensure that one keeps an adequate record of his duties. Different records are kept in different ways, books and formats. This makes it imperative for you to study the pattern of your records in line with accepted standards and to keep yourself informed of new innovations. Some people keep very good records of their activities, but most often cannot supply the records when they are needed. It is one thing to have records; it is another to keep them safe. You will discover that some records over the years have been exposed to insects, rain, dust, fire and other destructive elements.

It is with a view to making us understand the needs for proper and safe record keeping that this paper seeks to look at the importance or relevance of record keeping, types of record and their formats, updating and safekeeping of records. The principal should note that when he fails to keep records, he is in actual sense destroying the system instead of helping to build it. Educational record keeping practices however, vary substantially by size of institution and sophistication of administrative practices. They also vary as students move along the continuum from preschool towards secondary education, because, the role of educational institutions vary along the same continuum. Reports cards, conferences, and parent teachers associations are all devices by which principals are held directly accountable to parents, students and the society at large. An innovative principal is expected to make and keep more records about students today than ever before. Here people participate in making and keeping education records, and more people outside the educational system want access to them for other than educational purposes. The emphasis on educational record keeping has shifted from reporting progress to parents and supplementing personal contact in instructing and making decisions about students to serving not only as a management tool but also as a means of justifying an educational institution's actions and budget, and as a surrogate for personal contact with students.

As a student moves from one point to another in the education system, his path is blazed by records concerning his performance, his behavior, and his own and then often his family's circumstances. These records are created by an innovative principal mainly to record the students' progress, to help make decisions about him, and to improve the effectiveness of the educational programmes that the school provides. The mission and role of an innovative principal are kept determinants of its record- keeping practice. The mission of an innovative

principal should therefore be to care for and nurture students so as to lay a solid foundation for academic tasks they will confront in secondary education.

CONCLUSION

The importance of effective leadership in secondary schools cannot be overstated, especially when it concerns the protection and promotion of students' rights. In Nigeria, the domestication and implementation of the Child Rights Act (CRA) of 2003 offer a legal framework for safeguarding the rights of children within the educational setting. Education is a fundamental human right that plays a pivotal role in the development of any nation. For this reason, leadership in schools must align with legal and ethical standards that prioritize the welfare of students. **The** Child Rights Act (CRA) of 2003**,** which domesticated the United Nations Convention on the Rights of the Child (UNCRC), sets out the rights of every Nigerian child and provides a legal basis for their protection. However, effective implementation in schools largely depends on the awareness and commitment of educational leaders. Effective school leadership entails guiding, protecting, and empowering students while creating an atmosphere conducive to learning. Awareness of child rights influences policy formulation and implementation. This entails that leaders who understand the Child Right Acts are more likely to integrate child-friendly policies that uphold students' rights, including protection from corporal punishment and bullying.

Suggestions

From the discussions of this paper, the following are suggested for improved leadership in secondary schools:

- Ministries of Education and teacher training institutions should include Child Right Acts in leadership development programs for principals and educational administrators.
- Regular capacity-building workshops should be organized for school staff on the provisions and implications of the Child Right Acts to ensure effective leadership in secondary schools.
- School administrators should create committees to ensure that the rights of students are respected and that any violations are promptly addressed to effective leadership in schools.
- Government agencies should strengthen school inspection frameworks to include child rights compliance assessments.
- State governments should fully adopt and implement the Child Right Acts, ensuring uniformity in child protection laws across the country for effective leadership of secondary schools.

ABSTRACT

This paper examined educational programmes for leadership empowerment, entrepreneurship development, and sustainability. It examined how structured educational initiatives equip individuals with the necessary leadership and entrepreneurial skills to drive economic growth and societal transformation. Leadership empowerment through education enhances critical thinking, problem-solving, and strategic decision-making, preparing individuals to take on leadership roles in various sectors. Additionally, entrepreneurship education fosters creativity, resilience, and business acumen, enabling individuals to identify opportunities, develop innovative solutions, and sustain business ventures. The study also analyzed the role of curriculum design, higher education institutions, and government policy interventions in strengthening leadership and entrepreneurial capabilities. Furthermore, it highlighted the importance of experiential learning, mentorship, and technology integration in enhancing the effectiveness of educational programmes. The paper emphasized those global best practices in leadership and entrepreneurship education advocate for interdisciplinary learning and industry collaborations to ensure relevance in an evolving economic system. Although challenges such as outdated curricula and limited resources persist, continuous investment in education and policy reforms will enhance the sustainability of leadership and entrepreneurship development. The paper concluded that educational programmes serve as a vital mechanism for leadership empowerment, entrepreneurship development, and sustainability. Amongst others, the paper suggested that government and policy makers should develop and implement policies that support leadership and entrepreneurship education by integrating practical skill development into the national curriculum.

Keywords: Educational Programmes, Leadership, Leadership Empowerment, Entrepreneurship, Development, Sustainability.

INTRODUCTION

Education serves as a fundamental catalyst for leadership empowerment, entrepreneurship development, and sustainability. The nature of structured educational programmes helps individuals acquire essential skills that enable them to become effective leaders and innovative entrepreneurs, fostering economic growth and sustainable development. Leadership empowerment through education enhances critical thinking, problem-solving, and decision-making abilities, which are crucial for navigating the complexities of entrepreneurship and ensuring business sustainability. In many countries, particularly in Nigeria, there is an increasing recognition of the need to integrate leadership and entrepreneurial skills into educational curricula to equip individuals with the capacity to create and manage enterprises successfully (Olawale & Adepoju, 2021).

Moreover, entrepreneurship development through educational initiatives has been instrumental in reducing unemployment and fostering self-reliance. Programmes designed for entrepreneurship education focus on equipping learners with practical knowledge on business planning, financial management, and market analysis, enabling them to establish and sustain profitable ventures (Eze & Nwosu, 2019). These programmes are often structured to promote creativity, innovation, and resilience, which are necessary attributes for business success. Furthermore, leadership training within these educational frameworks instills a sense of responsibility and ethical business practices, ensuring that entrepreneurs contribute meaningfully to economic and social development. The integration of leadership and entrepreneurship education has therefore become an essential strategy for sustainable national development, as it fosters job creation, economic diversification, and poverty alleviation (Adegbite & Ojo, 2020).

Additionally, sustainability in entrepreneurship education ensures that enterprises are not only profit-driven but also environmentally and socially responsible. Educational programmes that emphasize sustainability equip future entrepreneurs with the knowledge and skills needed to implement eco-friendly business practices, corporate social responsibility, and long-term strategic planning (Ibrahim & Yusuf, 2021). In the Nigerian context, the incorporation of sustainable entrepreneurship in educational curricula is vital for addressing economic challenges and ensuring that businesses thrive in dynamic and competitive environments. Furthermore, higher education institutions play a pivotal role in fostering sustainable entrepreneurship by providing research-based knowledge, mentorship, and access to resources that facilitate business growth and stability.

Although various challenges hinder the effective implementation of leadership and entrepreneurship programmes, such as inadequate funding, outdated curricula, and lack of practical exposure, strategic policy interventions and collaborative efforts between educational institutions, government agencies, and private organizations can bridge these gaps (Okafor & Uchenna, 2020). In addition, global best practices in leadership and entrepreneurship education can serve as models for improving existing educational frameworks, ensuring that learners receive quality training that meets international standards. A well-structured educational programme for leadership empowerment not only nurtures entrepreneurial potential but also guarantees sustainability, ultimately fostering economic development and societal transformation (Ezeanya, 2019).

THEORETICAL FRAMEWORK

Transformational Leadership Theory

Transformational Leadership Theory, initially conceptualized by Burns in 1978 and later expanded by Bass in 1985, provides a framework for understanding how leaders inspire and motivate their followers to achieve higher levels of performance and personal development. The theory emphasizes four core components: idealized influence, inspirational motivation, intellectual stimulation, and individualized consideration (Fischer, 2021). Idealized influence reflects the leader's ability to serve as a role model, earning the respect and trust of subordinates. Inspirational motivation focuses on the ability of leaders to articulate a compelling vision that encourages commitment and enthusiasm among team members. Intellectual stimulation challenges followers to think critically, embrace innovation, and develop problem-solving skills, while individualized consideration ensures that leaders recognize and support the unique needs and aspirations of their followers (Fischer, 2021).

Moreover, the relevance of Transformational Leadership Theory to educational programmes for leadership empowerment and entrepreneurship development is evident in its emphasis on fostering creativity, resilience, and strategic thinking. Educational institutions that incorporate transformational leadership principles into their curricula enhance students' leadership capacities, preparing them to become visionary entrepreneurs and change agents. Leaders in entrepreneurship education who apply transformational leadership principles can instill confidence, ethical decision-making, and a commitment to sustainable business practices among learners (Fischer, 2021). The focus on intellectual stimulation is particularly crucial in entrepreneurship development, as it encourages learners to think critically, identify opportunities, and develop innovative solutions to business challenges. Furthermore, individualized consideration ensures that entrepreneurial education caters to the diverse needs of learners, equipping them with personalized mentorship and resources necessary for business sustainability.

Additionally, the application of Transformational Leadership Theory to sustainability in entrepreneurship underscores the importance of ethical leadership and long-term strategic planning. Entrepreneurs who adopt transformational leadership qualities are more likely to prioritize sustainable business practices, corporate social responsibility, and adaptability in competitive markets. This perspective aligns with the goals of educational programmes that seek to develop leaders capable of driving economic growth while addressing societal challenges. The theory, as discussed by Fischer (2021), remains a valuable guide for shaping educational frameworks that empower individuals to become visionary leaders and sustainable entrepreneurs.

CONCEPTUAL CLARIFICATIONS

Educational Programmes

Educational programmes encompass structured learning initiatives designed to impart knowledge, skills, and competencies necessary for individual and societal development. These programmes are developed to address specific educational needs, ranging from foundational literacy to specialized professional training (Afolabi, 2022). Educational programmes are implemented across various levels, including primary, secondary, and tertiary education, as well

as vocational and informal training systems. The primary goal of educational programmes is to equip learners with intellectual and practical abilities that enhance personal growth, employability, and contributions to national development.

Moreover, educational programmes are designed based on pedagogical principles that ensure effective knowledge transfer. They incorporate curriculum frameworks, instructional methodologies, and assessment strategies that facilitate learning outcomes (Ogunleye, 2021). The structure of an educational programme often determines its effectiveness in meeting the objectives of learners and stakeholders. Well-designed programmes integrate interactive learning experiences, technological advancements, and real-world applications that enhance learner engagement. Additionally, the evolution of educational programmes has seen a shift from traditional rote learning methods to competency-based and experiential learning approaches that encourage critical thinking and problem-solving skills.

Furthermore, educational programmes vary in scope and purpose, catering to diverse societal needs. Some programmes focus on academic excellence, preparing students for higher education and research, while others emphasize technical and vocational skills essential for workforce readiness (Nwachukwu, 2020). Professional and executive education programmes target skill enhancement and career advancement, ensuring individuals remain competitive in their respective fields. Additionally, educational programmes aimed at leadership and entrepreneurship development play a critical role in empowering individuals to drive economic growth and social transformation. These programmes equip learners with business acumen, financial literacy, and strategic management skills necessary for establishing and sustaining enterprises.

Additionally, the effectiveness of educational programmes is influenced by government policies, institutional frameworks, and resource availability. Governments and educational institutions collaborate to develop policies that enhance the accessibility, quality, and relevance of educational programmes (Ajayi, 2023). Adequate funding, infrastructural development, and teacher training are crucial factors that determine the success of educational initiatives. Moreover, partnerships between the public and private sectors contribute to curriculum development and the provision of industry-relevant training that aligns with market demands. Ensuring inclusivity in educational programmes is also essential, as it promotes equitable access to education for marginalized and disadvantaged populations.

Moreover, the integration of technology in educational programmes has transformed learning experiences, making education more accessible and adaptable to diverse learning needs. Online learning platforms, digital resources, and virtual classrooms have expanded educational opportunities beyond traditional classroom settings (Eze, 2023). Distance learning programmes and e-learning technologies have made it possible for individuals to acquire education regardless of geographical barriers. The incorporation of artificial intelligence and data analytics in educational planning has further enhanced personalized learning experiences and improved educational outcomes. Educational programmes play a vital role in fostering national development, economic growth, and societal progress. The continuous evolution of these programmes ensures that education remains relevant in addressing contemporary challenges and preparing individuals for future opportunities. Stakeholders, including educators, policymakers, and industry leaders, must collaborate to enhance the quality and sustainability of educational programmes, ensuring they meet the demands of an ever-changing world.

Leadership Empowerment

Leadership empowerment is a crucial component of educational and economic advancement, as it fosters the development of individuals who can drive innovation, social change, and institutional growth. Leadership empowerment involves equipping individuals with the necessary skills, knowledge, and confidence to make decisions, take responsibility, and inspire others toward collective progress (Olawale, 2022). Effective leadership training is essential in various sectors, including education, business, and governance, as it contributes to improved decision-making processes, organizational efficiency, and community development. Leadership empowerment through educational programmes plays a fundamental role in shaping visionary leaders who can navigate complex societal challenges and implement strategic solutions.

Moreover, leadership empowerment is instrumental in creating inclusive and participatory governance structures. When individuals are empowered with leadership skills, they become active contributors to policy-making, institutional reforms, and sustainable development initiatives (Adebayo, 2021). Leadership training fosters critical thinking, problem-solving, and emotional intelligence, enabling individuals to manage resources effectively and handle organizational challenges. Additionally, mentorship and coaching programmes have proven effective in leadership development, as they provide practical insights and guidance for aspiring leaders. Establishing mentorship networks within educational and professional settings enhances leadership capacity and ensures continuous skill refinement.

Furthermore, leadership empowerment is linked to fostering ethical leadership practices. A well-empowered leader prioritizes integrity, transparency, and accountability in decision-making processes (Chinwe, 2020). Ethical leadership contributes to organizational stability, employee motivation, and public trust in institutions. Leadership training programmes that integrate ethics and corporate governance principles cultivate leaders who uphold moral standards and social responsibility in their leadership roles. Additionally, leadership empowerment supports gender inclusivity by creating opportunities for women and underrepresented groups to take on leadership positions and participate in economic development initiatives.

Additionally, effective leadership empowerment enhances collaboration and teamwork, which are essential for achieving organizational and societal goals. Leaders with strong interpersonal and communication skills can inspire their teams, foster cooperation, and create an environment conducive to innovation (Eze, 2023). Leadership education that incorporates conflict resolution, negotiation techniques, and cross-cultural communication equips individuals with the skills necessary to navigate complex professional environments. Moreover, leadership training strengthens individuals' ability to adapt to changing environments and make informed decisions in uncertain situations.

In addition, leadership empowerment plays a critical role in national development by equipping individuals with the competencies needed to drive economic and social progress. When leadership education is prioritized, societies experience improved governance, enhanced institutional efficiency, and increased economic productivity (Obi, 2022). Leadership training institutions and organizations must continue to develop strategies for empowering individuals, ensuring that leadership remains dynamic, inclusive, and responsive to emerging global trends.

Entrepreneurship Development

Entrepreneurship development is essential for fostering economic growth, job creation, and sustainable business practices. Entrepreneurship development involves equipping individuals with the necessary skills, knowledge, and resources to identify opportunities, develop innovative business ideas, and manage enterprises successfully (Akinola, 2022). Through entrepreneurship education, individuals gain financial literacy, risk management skills, and business development strategies that enable them to establish and sustain profitable ventures. Educational institutions play a pivotal role in entrepreneurship development by integrating business training, startup incubation, and mentorship programmes into their curricula. Entrepreneurship over the years has provided the needed skills and expertise required for national development (Amadi & Ogona, 2024).

Moreover, entrepreneurship development contributes to reducing unemployment rates by creating self-employment opportunities. Many economies, particularly in developing nations, face challenges related to job scarcity and workforce saturation. Entrepreneurship education provides an alternative pathway for individuals to generate income, create businesses, and employ others (Okoro, 2021). Business incubation centres established within educational institutions serve as platforms where aspiring entrepreneurs receive guidance, funding, and networking opportunities. Through these initiatives, entrepreneurs can refine their business models, access market opportunities, and navigate the challenges of business sustainability.

Furthermore, entrepreneurship development fosters innovation and technological advancement. Entrepreneurs are often at the forefront of developing new products, services, and solutions that address societal needs (Bamidele, 2023). Encouraging entrepreneurial thinking in educational settings nurtures creativity, problem-solving skills, and adaptability among students. Additionally, entrepreneurship training that incorporates digital literacy and e-commerce strategies enhances individuals' ability to leverage technology for business growth. Many modern enterprises thrive through digital platforms, emphasizing the need for entrepreneurship education to integrate technological advancements into business training.

Additionally, entrepreneurship development contributes to wealth creation and economic diversification. A society that prioritizes entrepreneurship education experiences increased economic activities, leading to higher income levels and improved living standards (Nwosu, 2020). Governments and policymakers must support entrepreneurship development through favourable business policies, financial incentives, and infrastructural development. Access to capital remains a major challenge for aspiring entrepreneurs, highlighting the importance of funding mechanisms such as startup grants, venture capital investments, and microfinance initiatives. When financial support systems are well-structured, entrepreneurs can establish and expand their businesses successfully.

In addition, entrepreneurship development promotes resilience and adaptability in the face of economic uncertainties. Entrepreneurs equipped with business management skills can navigate market fluctuations, economic downturns, and industry disruptions effectively (Ibrahim, 2022). Entrepreneurship education that emphasizes business sustainability, customer relationship management, and crisis management prepares individuals to sustain their enterprises in challenging economic conditions. Governments, educational institutions, and private sector stakeholders must collaborate to create an enabling environment for entrepreneurship development, ensuring that individuals are well-equipped to contribute to economic progress.

Sustainability in Entrepreneurship and Leadership Training

Sustainability in entrepreneurship and leadership training is essential for ensuring long-term economic, social, and environmental benefits. Sustainable leadership and entrepreneurship training programmes focus on equipping individuals with skills that promote responsible business practices, ethical decision-making, and environmental consciousness (Ogundele, 2022). Sustainability in these programmes ensures that businesses and leadership practices align with global sustainability goals, such as corporate social responsibility, green business initiatives, and ethical governance. Educational institutions play a crucial role in promoting sustainability by incorporating sustainability principles into entrepreneurship and leadership curricula.

Moreover, sustainability in entrepreneurship emphasizes the need for business models that prioritize long-term impact rather than short-term profitability. Sustainable entrepreneurs develop businesses that address social and environmental challenges while maintaining financial viability (Adeyemi, 2021). Concepts such as social entrepreneurship, circular economy, and impact investing are increasingly integrated into entrepreneurship training programmes. These approaches ensure that businesses contribute positively to society while remaining profitable. Additionally, sustainability-focused leadership training emphasizes ethical leadership, stakeholder engagement, and corporate governance principles that enhance long-term organizational stability.

Furthermore, sustainability in entrepreneurship and leadership training involves equipping individuals with adaptive skills to navigate changing global trends. The business landscape is constantly evolving due to technological advancements, economic fluctuations, and regulatory changes (Ojo, 2023). Entrepreneurs and leaders who undergo sustainability-focused training are better prepared to handle uncertainties, implement innovative solutions, and make data-driven decisions. Leadership and entrepreneurship programmes must incorporate strategic foresight, risk management, and resilience-building techniques to ensure that individuals remain competitive in dynamic environments.

Additionally, sustainability in leadership training fosters inclusive and participatory leadership practices. Inclusive leadership encourages diversity, equity, and social responsibility, ensuring that all individuals have access to opportunities for growth and development (Eze, 2023). Leadership education that promotes gender equality, cultural awareness, and collaborative decision-making contributes to more equitable and sustainable societies. Additionally, integrating sustainability principles into leadership development encourages leaders to adopt environmentally friendly policies, corporate ethics, and sustainable business models.

Sustainability in entrepreneurship and leadership training contributes to community development and societal well-being. Sustainable business practices create jobs, enhance economic stability, and promote social cohesion (Abiola, 2022). Leadership training that focuses on sustainability ensures that future leaders make decisions that benefit not only their organizations but also society at large. Governments, academic institutions, and business organizations must collaborate to design leadership and entrepreneurship training programmes that prioritize sustainability, ensuring that businesses and institutions contribute positively to long-term development goals.

Leadership Empowerment in Education

Leadership empowerment in education is centered on developing individuals' ability to lead, influence, and inspire others within academic and professional environments. Educational institutions provide structured programmes that equip students with leadership competencies, fostering critical thinking, decision-making, and problem-solving abilities (Adamu & Oladipo, 2021). Through leadership-focused curricula, students are exposed to theoretical frameworks and practical applications that prepare them for leadership roles in entrepreneurship, business management, and governance. Additionally, leadership empowerment in education promotes a culture of accountability, teamwork, and resilience, which are essential traits for individuals seeking to effect positive change in society (Chinonso, 2020).

Moreover, leadership training in education integrates experiential learning, mentorship, and leadership simulations to enhance students' confidence and capacity to handle complex situations. Leadership workshops and extracurricular activities offer opportunities for learners to develop public speaking, negotiation, and conflict resolution skills, which are crucial for managerial success (Ogundele & Ajayi, 2022). Institutions that prioritize leadership empowerment ensure that students receive exposure to diverse leadership styles, enabling them to develop adaptability in various professional settings. Furthermore, the inclusion of ethics and corporate responsibility in leadership education instills values of integrity and fairness, which are vital for sustainable leadership practices (Nwachukwu, 2023).

Additionally, the role of technology in leadership education has expanded opportunities for students to engage in digital leadership and global networking. Online leadership courses and virtual mentoring programmes provide access to leadership training beyond the traditional classroom setting, allowing individuals to learn from global leadership experts (Adebisi & Kolawole, 2021). The integration of case studies and real-life scenarios in leadership courses helps students understand the dynamics of leadership in different contexts, preparing them for future responsibilities. Furthermore, leadership empowerment through education enhances individuals' ability to foster innovation and entrepreneurship, as leaders who possess strategic thinking skills are better equipped to identify opportunities and manage organizational challenges effectively (Ekwueme & Nnadi, 2020).

Although leadership empowerment in education has proven beneficial, barriers such as limited access to leadership development resources, outdated curricula, and inadequate funding hinder its effectiveness. Addressing these challenges requires the commitment of educational policymakers, private sector engagement, and continuous curriculum revision to align leadership education with modern-day demands (Uche & Okonkwo, 2022). Leadership empowerment remains a key driver of entrepreneurship development and sustainability, as it nurtures visionary individuals who can lead and transform industries.

Entrepreneurship Development through Educational Programmes

Entrepreneurship development through educational programmes is a structured approach to equipping individuals with the necessary knowledge, skills, and mindset required for business creation and management. Educational institutions incorporate entrepreneurship training into their curricula to foster innovation, economic self-reliance, and job creation (Okon & Adebayo, 2023). Through well-designed courses, students gain insights into business planning, financial literacy, market analysis, and risk management, which are fundamental to successful

entrepreneurship. Furthermore, entrepreneurship education encourages creative thinking and resilience, enabling individuals to navigate business uncertainties effectively (Akanbi & Yusuf, 2021).

Moreover, entrepreneurship development in education integrates hands-on learning methodologies such as business incubation, industry mentorship, and simulation-based training. Business incubation centers in universities provide aspiring entrepreneurs with access to workspace, funding opportunities, and mentorship from experienced professionals (Chidiebere & Okafor, 2022). These initiatives enable students to transform business ideas into viable enterprises, reducing reliance on traditional employment. Additionally, the inclusion of technology in entrepreneurship education has expanded opportunities for students to explore digital entrepreneurship, e-commerce, and innovative business models that enhance business growth (Oluwole & Adejumo, 2020).

Furthermore, entrepreneurship development through education contributes to national economic growth by fostering self-employment and reducing youth unemployment. In Nigeria, structured entrepreneurship education has been identified as a means of addressing the challenges of unemployment and economic instability (Obinna & Nwachukwu, 2023). Government policies supporting entrepreneurship training in schools and universities have further strengthened the role of education in business development. Additionally, entrepreneurship education cultivates a problem-solving mindset, enabling students to identify societal challenges and develop sustainable solutions that contribute to social and economic transformation (Babatunde & Olatunji, 2021).

Although entrepreneurship education has gained relevance, challenges such as inadequate funding, lack of skilled educators, and limited access to resources hinder its full implementation. Addressing these limitations requires collaborative efforts between educational institutions, industry stakeholders, and policymakers to ensure that entrepreneurship training remains relevant and impactful (Afolabi & Uchenna, 2022). Entrepreneurship development through education remains a critical component of national progress, as it empowers individuals to establish businesses that drive innovation, create employment, and contribute to economic sustainability.

Sustainability in Entrepreneurship and Leadership Training

Sustainability in entrepreneurship and leadership training emphasizes the need for businesses and leadership structures to prioritize long-term economic viability, environmental responsibility, and social impact. Entrepreneurs who adopt sustainable business models ensure that their ventures contribute positively to society while maintaining financial profitability (Ogunleye & Adeyemi, 2023). Leadership training that integrates sustainability principles equips individuals with the skills to make ethical decisions, manage resources efficiently, and implement environmentally friendly business practices. Furthermore, sustainability-focused leadership ensures that organizations remain resilient in competitive markets, adapting to global trends while fostering economic stability (Onyekachi & Chukwu, 2021).

Moreover, sustainability in entrepreneurship training involves incorporating environmental management, ethical leadership, and social responsibility into business education. Many educational institutions have introduced sustainability-oriented courses that teach aspiring entrepreneurs how to minimize carbon footprints, optimize supply chain efficiency, and integrate sustainable production processes (Emeka & Okorie, 2022). Additionally, leadership training that focuses on sustainability emphasizes the importance of fostering inclusive work environments,

fair labor practices, and corporate governance that align with global sustainability goals (Alabi & Eze, 2020).

Furthermore, universities and business schools have established sustainability incubators and research centers that provide entrepreneurs with the necessary tools to develop businesses that align with environmental and social priorities. These initiatives support innovation in renewable energy, waste management, and sustainable agriculture, contributing to the overall development of green entrepreneurship (Ojo & Fasanya, 2021). In addition, leadership training within sustainability-focused educational programmes prepares individuals to manage businesses that balance economic profitability with ethical considerations, ensuring long-term growth and social impact (Udoh & Anozie, 2023).

Although sustainability in entrepreneurship and leadership training has gained global recognition, challenges such as financial constraints, regulatory barriers, and resistance to change hinder its widespread adoption. Overcoming these obstacles requires policy reforms, increased investment in sustainable entrepreneurship initiatives, and enhanced collaboration between the public and private sectors to support sustainability-focused business education (Okechukwu & Balogun, 2022). Sustainability in entrepreneurship and leadership training remains a crucial factor in ensuring that businesses operate responsibly while contributing to environmental conservation, social well-being, and economic stability.

Curriculum Design for Leadership and Entrepreneurial Skills

Curriculum design for leadership and entrepreneurial skills plays a central role in preparing individuals for leadership positions and fostering entrepreneurial mindsets. Educational institutions develop structured curricula that integrate theoretical knowledge with practical applications, equipping students with essential competencies for success in leadership and business ventures (Akinyemi & Okoro, 2021). The inclusion of leadership theories, strategic management, and entrepreneurial studies in academic programmes ensures that learners acquire problem-solving skills, decision-making abilities, and innovative thinking capacities required in professional and business environments. Furthermore, a well-structured curriculum incorporates hands-on learning experiences such as business incubation, leadership simulations, and case studies to bridge the gap between academic knowledge and real-world practice (Eze & Onuoha, 2022).

Moreover, curriculum design for leadership and entrepreneurship emphasizes adaptability to dynamic market trends and evolving global challenges. Modern curricula integrate digital entrepreneurship, sustainability in business, and financial literacy to ensure that students remain competitive in contemporary industries (Olawale & Adebayo, 2023). Leadership training embedded in entrepreneurship education provides students with negotiation skills, ethical leadership principles, and crisis management strategies, which are essential for business success. Additionally, interdisciplinary approaches in curriculum design allow students to develop cross-sectoral skills, enabling them to apply leadership and entrepreneurial competencies in diverse fields such as technology, healthcare, and social enterprises (Ibrahim & Chukwu, 2021).

Furthermore, effective curriculum design ensures that leadership and entrepreneurship education remains inclusive, catering to individuals from diverse backgrounds and learning styles. Institutions implement mentorship programmes, workshops, and peer-led initiatives that foster collaboration and experiential learning (Uche & Nnamdi, 2020). The use of innovative teaching methodologies, including project-based learning, role-playing exercises, and real-life

business challenges, enhances students' critical thinking and creativity. Additionally, aligning curriculum content with industry demands and policy frameworks ensures that students graduate with skills relevant to modern-day leadership and entrepreneurship (Bassey & Okonkwo, 2022).

Furthermore, curriculum design for leadership and entrepreneurial skills has gained prominence, challenges such as outdated teaching methodologies, limited access to resources, and insufficient industry collaboration hinder its effectiveness. Strengthening curriculum relevance requires continuous engagement with industry stakeholders, policymakers, and educators to ensure that learning materials align with contemporary leadership and entrepreneurship trends (Obiora & Adeyemi, 2023). Enhancing leadership and entrepreneurship curricula remains essential for national economic development, as it prepares individuals to drive innovation, create employment, and contribute to sustainable business practices.

The Role of Higher Education in Leadership Empowerment

The role of higher education in leadership empowerment is crucial in shaping individuals who can drive social and economic transformation. Universities and colleges serve as platforms for nurturing leadership competencies, providing students with knowledge, exposure, and practical experiences necessary for effective leadership (Nwachukwu & Ogunleye, 2021). Through structured academic programmes, higher education institutions equip learners with decision-making abilities, strategic vision, and ethical leadership values that prepare them for leadership roles in business, government, and nonprofit sectors. Furthermore, leadership empowerment in higher education fosters analytical thinking and innovation, enabling students to develop critical perspectives on leadership challenges and solutions (Adebisi & Chinedu, 2022).

Moreover, higher education institutions play a vital role in leadership development by integrating leadership training into curricula, extracurricular activities, and mentorship programmes. Leadership courses emphasize corporate governance, conflict resolution, and effective communication, which are essential for managerial roles (Obi & Okafor, 2020). Additionally, student leadership organizations, internships, and community engagement initiatives provide experiential learning opportunities that enhance leadership capabilities. Universities that prioritize leadership empowerment encourage students to take on responsibilities in student unions, business incubators, and research projects, fostering a culture of leadership from an early stage (Ekene & Afolabi, 2023).

Furthermore, higher education institutions contribute to leadership empowerment through research and policy development. Scholars engage in leadership studies that influence governance models, organizational management, and public policy reforms (Olayemi & Udoh, 2021). The dissemination of research findings on leadership effectiveness enables policymakers and business leaders to make informed decisions that promote sustainable leadership practices. Additionally, international collaborations and academic exchange programmes expose students to global leadership perspectives, allowing them to adopt best practices from different cultural and economic contexts (Benson & Nduka, 2022).

Moreover, higher education has made progress in leadership empowerment, challenges such as inadequate funding, outdated teaching approaches, and limited access to leadership opportunities remain obstacles. Addressing these challenges requires increased investment in leadership development programmes, modernization of teaching strategies, and stronger partnerships between universities and industries (Emeka & Ozoemena, 2023). Higher education

continues to be a fundamental driver of leadership empowerment, shaping individuals who can inspire change and contribute to national and global development.

Government and Policy Interventions in Entrepreneurial Education

Government and policy interventions in entrepreneurial education play a crucial role in fostering an enabling environment for business development and economic growth. Policymakers design and implement frameworks that integrate entrepreneurship education into national education systems, ensuring that students receive training in business creation, financial literacy, and strategic management (Ogunyemi & Adekunle, 2021). Furthermore, government-backed entrepreneurship initiatives provide funding, training resources, and mentorship programmes that support aspiring entrepreneurs. These interventions equip individuals with the skills and confidence to start and sustain businesses, reducing unemployment rates and fostering economic self-reliance (Chukwuma & Okeke, 2022).

Moreover, policy interventions focus on curriculum reform to align entrepreneurship education with industry demands and technological advancements. Governments collaborate with educational institutions to develop policies that promote hands-on learning experiences, innovation hubs, and business incubation centers (Ajayi & Obinna, 2023). Additionally, financial incentives such as grants, low-interest loans, and tax relief for startups encourage entrepreneurship among graduates. Government-funded entrepreneurship training workshops and competitions also serve as platforms for nurturing business ideas and connecting young entrepreneurs with potential investors (Olowookere & Chinedu, 2021).

Furthermore, regulatory policies influence the success of entrepreneurial education by creating legal frameworks that support business establishment and sustainability. Governments enforce policies that simplify business registration processes, protect intellectual property rights, and provide access to market information (Ibe & Adeola, 2020). Additionally, policies that integrate digital entrepreneurship into educational curricula enable students to explore e-commerce, technology-driven businesses, and online financial management tools, positioning them for success in modern economic environments (Ezeh & Olatunji, 2022).

Government and policy interventions have enhanced entrepreneurship education, challenges such as bureaucratic bottlenecks, inconsistent policy implementation, and inadequate funding hinder their full effectiveness. Strengthening policy frameworks requires continuous review, stakeholder engagement, and increased financial support for entrepreneurship education initiatives (Ogunlade & Nwachukwu, 2023). Government interventions remain essential in ensuring that entrepreneurship education remains relevant, accessible, and impactful, fostering a generation of business leaders who contribute to economic stability and innovation.

Leadership Empowerment and Entrepreneurship Development

Leadership empowerment and entrepreneurship development are interconnected processes that equip individuals with the necessary skills, knowledge, and mindset to drive innovation and economic growth. Educational institutions, training programs, and policy initiatives aim to develop leaders who can make strategic decisions, inspire teams, and contribute to business expansion (Okechukwu & Adebanjo, 2021). Leadership empowerment involves enhancing individuals' abilities to manage challenges, adapt to dynamic market conditions, and create value-driven solutions. Furthermore, entrepreneurship development enables individuals to

identify opportunities, develop business models, and implement sustainable enterprises that contribute to national economies (Eze & Chukwudi, 2022).

Moreover, leadership empowerment through entrepreneurship education fosters self-reliance, problem-solving abilities, and resilience. Entrepreneurial leaders exhibit strong decision-making capacities, risk-taking attitudes, and the ability to navigate uncertainties in business environments (Olawale & Nwachukwu, 2023). Educational institutions play a crucial role in promoting leadership empowerment by integrating entrepreneurship training, mentorship programs, and business incubation initiatives into curricula. Through experiential learning methods, such as case studies, simulations, and internships, students gain hands-on experience that prepares them for leadership roles in various sectors (Adebayo & Uchenna, 2021).

Furthermore, entrepreneurship development thrives in environments where leadership skills are effectively nurtured. Business ventures require strategic direction, financial acumen, and innovative thinking, all of which are enhanced through leadership training (Ibrahim & Oyetunde, 2020). Leadership development programs focus on ethical decision-making, negotiation skills, and team management, ensuring that entrepreneurs can effectively manage human and material resources. Additionally, entrepreneurship education emphasizes sustainability, social responsibility, and community engagement, encouraging business leaders to contribute positively to society (Obiora & Okafor, 2022).

Although leadership empowerment and entrepreneurship development have advanced significantly, challenges such as limited access to financial resources, inadequate mentorship, and policy constraints hinder their effectiveness. Strengthening entrepreneurship education through government support, private sector collaborations, and technological integration can enhance leadership capacities among aspiring entrepreneurs (Uche & Ekene, 2023). Leadership empowerment remains a fundamental pillar in entrepreneurship development, ensuring that business leaders are equipped to drive economic transformation, innovation, and sustainable business growth.

Global Best Practices in Leadership and Entrepreneurship Education

Global best practices in leadership and entrepreneurship education emphasize the integration of innovative teaching methodologies, experiential learning, and industry collaboration. Countries with successful leadership and entrepreneurship education models focus on curriculum flexibility, mentorship programs, and skill-based learning approaches that prepare students for leadership roles and entrepreneurial ventures (Johnson & Kalu, 2021). Furthermore, leading institutions worldwide incorporate interdisciplinary courses, digital learning tools, and real-world problem-solving exercises to enhance the effectiveness of entrepreneurship education (Benson & Olatunji, 2022).

Moreover, one of the key global best practices is the emphasis on mentorship and industry engagement. Universities and business schools establish partnerships with industry leaders, entrepreneurs, and corporate executives to provide students with practical insights into leadership and business management (Obi & Afolabi, 2020). These mentorship initiatives bridge the gap between theoretical knowledge and real-world application, allowing students to learn from experienced professionals. Additionally, startup incubation programs, pitch competitions, and networking events create opportunities for students to develop business ideas and access funding support (Emeka & Chinedu, 2023).

Furthermore, technology-driven entrepreneurship education is a critical global best practice. Many institutions leverage online learning platforms, artificial intelligence tools, and virtual business simulations to provide students with interactive and engaging learning experiences (Ezeh & Adeyemi, 2021). Digital entrepreneurship courses, coding boot camps, and blockchain-based business modules equip students with the skills needed for the modern business environment. Additionally, integrating sustainability and social impact principles into entrepreneurship education ensures that future leaders adopt ethical business practices and contribute to environmental and social well-being (Nwachukwu & Okeke, 2022).

Although global best practices in leadership and entrepreneurship education provide valuable insights, the adaptation of these practices requires contextual considerations. Educational institutions in developing economies must tailor global models to align with local socio-economic realities, regulatory frameworks, and cultural influences (Ogunlade & Adebanjo, 2023). Ensuring the continuous improvement of entrepreneurship education through research, innovation, and stakeholder collaboration remains essential in preparing future leaders who can drive sustainable economic development.

The Future of Educational Programmes for Sustainable Leadership Development

The future of educational programmes for sustainable leadership development is centered on adaptability, technological integration, and inclusivity. As global economic and social challenges evolve, educational institutions must design leadership training programmes that prepare students for dynamic and complex leadership environments (Olawale & Nduka, 2023). Moreover, sustainability in leadership development requires an emphasis on ethical leadership, environmental responsibility, and social impact, ensuring that future leaders adopt values-driven decision-making approaches (Bassey & Okonkwo, 2022).

Furthermore, the integration of digital technologies into leadership education is shaping the future of leadership development. Online leadership training, artificial intelligence-driven mentorship platforms, and virtual reality simulations provide students with interactive learning experiences (Adebisi & Ozoemena, 2021). These technological advancements enhance accessibility to leadership education, allowing learners from diverse backgrounds to acquire leadership competencies. Additionally, the use of big data analytics and machine learning in leadership assessment enables institutions to personalize leadership training based on individual learning needs and career aspirations (Ibrahim & Chukwu, 2022).

Moreover, the future of sustainable leadership development emphasizes interdisciplinary learning and collaboration. Leadership challenges require knowledge from multiple disciplines, including economics, environmental science, and technology (Obiora & Ekene, 2021). Educational programmes must integrate leadership education with courses in sustainability, global governance, and digital transformation to prepare students for the complexities of modern leadership roles. Additionally, global partnerships between universities, industries, and policymakers foster knowledge exchange and best practice adoption in leadership training (Ogunyemi & Adeola, 2023).

Although advancements in leadership education indicate a promising future, challenges such as resource constraints, resistance to curriculum change, and disparities in access to leadership training persist. Strengthening educational policies, increasing investment in leadership training, and leveraging public-private partnerships can enhance the sustainability of leadership education (Nwachukwu & Adebayo, 2023). Future educational programmes must

remain responsive to societal changes, technological advancements, and environmental sustainability, ensuring that leaders are equipped to address emerging global challenges effectively.

STRATEGIES FOR IMPLEMENTING LEADERSHIP AND ENTREPRENEURSHIP PROGRAMMES

Effective implementation of leadership and entrepreneurship programmes requires well-structured strategies that promote skill acquisition, innovation, and sustainable business practices. Institutions and policymakers must adopt practical approaches to ensure that these programmes produce competent leaders and entrepreneurs who can contribute meaningfully to economic and social development. The following strategies can enhance the successful execution of leadership and entrepreneurship education.

Curriculum Reform and Industry Alignment

Leadership and entrepreneurship education must incorporate a dynamic curriculum that aligns with industry needs. Traditional teaching methods that focus solely on theoretical knowledge should be replaced with competency-based learning that integrates real-world applications. Engaging industry professionals in curriculum development ensures that students gain relevant skills that match market demands. Furthermore, incorporating experiential learning, case studies, and business simulations allows students to apply theoretical concepts in practical settings. Continuous curriculum reviews are essential to ensure that educational programmes remain responsive to global economic changes and technological advancements.

Integration of Experiential Learning and Practical Training

Providing students with hands-on experience is critical for effective leadership and entrepreneurship training. Institutions should incorporate internships, business incubators, startup accelerators, and mentorship programmes into their curricula. These initiatives allow students to gain exposure to real-world business environments, helping them develop problem-solving skills, critical thinking, and decision-making capabilities. Additionally, organizing business competitions, hackathons, and leadership workshops fosters innovation and teamwork among students. By emphasizing experiential learning, institutions can bridge the gap between theory and practice, preparing students for entrepreneurial success.

Leveraging Technology and Digital Tools

The integration of technology enhances the effectiveness of leadership and entrepreneurship education. Online learning platforms, virtual business simulations, and artificial intelligence-driven analytics can provide students with an interactive learning experience. Digital tools such as e-learning portals, business modeling software, and virtual mentorship programmes make training accessible to a wider audience, including those in remote areas. Institutions should also introduce courses on digital entrepreneurship, e-commerce, and fintech to prepare students for modern business environments. Ensuring that students are proficient in digital literacy equips them with the necessary skills to leverage technology for business growth.

Public-Private Partnerships for Funding and Support

Collaboration between governments, educational institutions, and private sector organizations is crucial for the sustainability of leadership and entrepreneurship programmes. Establishing partnerships with corporate entities, business associations, and non-governmental organizations provides financial support, technical expertise, and access to business networks. Private sector involvement can also facilitate internship placements, funding for student-led startups, and knowledge-sharing initiatives. Governments should offer incentives such as tax breaks and grants to encourage private sector investment in entrepreneurship education. These collaborations create a supportive ecosystem that fosters business development and leadership capacity building.

Strengthening Policy Frameworks and Government Support

Effective policies play a vital role in promoting leadership and entrepreneurship education. Governments should develop policies that prioritize entrepreneurship training in national education agendas. Establishing regulatory frameworks that support business incubation, access to credit facilities, and startup development encourages more individuals to pursue entrepreneurship. Additionally, policies that promote gender inclusivity, youth entrepreneurship, and leadership diversity enhance equal opportunities in leadership and business. Governments must also ensure that entrepreneurship education is integrated into primary, secondary, and tertiary education systems to cultivate an entrepreneurial mindset from an early age.

Capacity Building for Educators and Mentors

The effectiveness of leadership and entrepreneurship programmes depends on the quality of instructors and mentors. Many institutions lack educators with industry experience, which limits the practical relevance of the training. Providing capacity-building programmes, professional development workshops, and certifications for educators enhances their ability to deliver effective training. Additionally, inviting successful entrepreneurs, business executives, and leadership experts as guest lecturers enriches students' learning experiences. Establishing mentorship networks where students can interact with experienced professionals fosters knowledge transfer and guidance in business development.

Encouraging Entrepreneurial Mindset and Leadership Culture

Entrepreneurship education should not only focus on business creation but also on cultivating an entrepreneurial mindset that encourages innovation, resilience, and leadership. Institutions should promote leadership development by incorporating training on decision-making, emotional intelligence, and strategic thinking. Creating leadership clubs, entrepreneurship societies, and peer mentoring programmes allows students to develop essential soft skills needed for business success. Encouraging a culture of risk-taking, adaptability, and ethical leadership prepares students to navigate the complexities of the business world.

CHALLENGES IN IMPLEMENTING LEADERSHIP AND ENTREPRENEURSHIP PROGRAMMES

Educational programmes designed for leadership empowerment and entrepreneurship development face several obstacles that hinder their effectiveness and sustainability. While these programmes aim to equip individuals with the skills needed for leadership and business innovation, various institutional, financial, and societal challenges limit their impact. Addressing these barriers is essential to ensuring that leadership and entrepreneurship education remains relevant, accessible, and capable of driving economic and social transformation. The following are some of the key challenges affecting the successful implementation of leadership and entrepreneurship programmes.

Inadequate Funding

The successful implementation of leadership and entrepreneurship programmes requires substantial financial resources for infrastructure, curriculum development, training materials, and experienced instructors. Many educational institutions, particularly in developing economies, struggle with limited funding, which affects the quality and accessibility of these programmes. Without adequate financial investment, institutions may lack modern facilities, technology-driven learning tools, and mentorship programmes necessary for developing competent leaders and entrepreneurs. Additionally, students from low-income backgrounds may face financial constraints that hinder their participation in these programmes. Addressing this challenge requires increased government funding, private sector sponsorship, and international donor support to ensure that leadership and entrepreneurship education remains inclusive and effective.

Outdated Curriculum

Many educational institutions continue to use curricula that do not reflect contemporary leadership and entrepreneurship demands. Traditional teaching methods often focus on theoretical knowledge without incorporating practical skills, industry-relevant experiences, and real-world applications. The dynamic nature of global markets requires an adaptive curriculum that integrates technological advancements, digital entrepreneurship, sustainability strategies, and innovation. Failure to update the curriculum results in graduates who are ill-prepared for modern business challenges and leadership roles. Educational policymakers and institutions must continuously revise curricula, incorporating case studies, problem-solving activities, and industry collaborations to ensure relevance and practical impact.

Limited Access to Practical Training

Effective leadership and entrepreneurship education extend beyond theoretical instruction to hands-on experience. However, many institutions lack practical training components such as internships, mentorship programmes, business incubators, and startup funding opportunities. Without exposure to real-world entrepreneurial environments, students struggle to develop problem-solving, decision-making, and innovation skills. Additionally, a lack of industry partnerships limits opportunities for students to gain first-hand experience in business management and leadership roles. To overcome this challenge, institutions should collaborate

with industry leaders, create business incubators, and implement experiential learning models that expose students to the realities of entrepreneurship and leadership.

Resistance to Change and Innovation

Many educational institutions and policymakers resist changing traditional teaching approaches and adopting modern methodologies in leadership and entrepreneurship education. Bureaucratic processes, rigid academic structures, and resistance from educators accustomed to conventional teaching practices slow down necessary reforms. Additionally, some stakeholders may view entrepreneurship education as secondary to traditional academic subjects, leading to limited institutional support. Overcoming this challenge requires a shift in mindset, increased awareness of the importance of leadership and entrepreneurship training, and capacity-building programmes for educators to embrace innovative teaching methods. Educational institutions must foster a culture of adaptability and encourage continuous curriculum improvements to keep up with evolving economic and technological trends.

Inadequate Government and Policy Support

Leadership and entrepreneurship education require strong policy backing to thrive, yet many governments fail to prioritize these programmes in their national education policies. A lack of clear policies, regulatory frameworks, and financial incentives discourages institutions from investing in entrepreneurial education. Without proper government support, leadership and entrepreneurship training remain underfunded, and students lack access to the necessary resources and mentorship. Governments must implement policies that promote leadership and entrepreneurship education by providing grants, tax incentives, and startup funding. Additionally, regulatory bodies should work closely with academic institutions and industry stakeholders to create enabling environments that foster entrepreneurship and leadership development.

Lack of Qualified Instructors and Mentors

The quality of leadership and entrepreneurship education depends significantly on the expertise of instructors and mentors. Many institutions face a shortage of qualified educators with industry experience in business management, leadership, and entrepreneurship. Instructors with only theoretical knowledge may struggle to equip students with the practical skills needed to succeed in competitive markets. Furthermore, the absence of mentorship programmes deprives students of the opportunity to learn from experienced entrepreneurs and leaders. Addressing this challenge requires institutions to recruit industry professionals, organize capacity-building workshops for educators, and establish mentorship networks where students can interact with successful entrepreneurs and business leaders.

Cultural and Societal Perceptions

In some societies, entrepreneurship is not widely regarded as a viable career path, leading to low enrollment in entrepreneurial education programmes. Cultural beliefs that prioritize traditional employment over self-employment discourage students from pursuing entrepreneurial ventures.

Additionally, leadership roles are often associated with certain societal groups, limiting inclusivity in leadership training programmes. Overcoming this challenge requires awareness campaigns, policy reforms, and educational strategies that promote entrepreneurship and leadership as essential drivers of economic development. Encouraging a mindset shift towards innovation, self-reliance, and leadership excellence will help change societal perceptions and increase participation in these programmes.

Technology and Digital Divide

The increasing reliance on digital tools in education presents challenges for institutions with inadequate technological infrastructure. Many leadership and entrepreneurship programmes require access to online learning platforms, digital business simulations, and technological tools for innovation. However, some institutions, especially in developing regions, lack the resources to integrate technology into their educational programmes. Additionally, students from disadvantaged backgrounds may have limited access to digital devices and internet connectivity, restricting their ability to engage in online learning opportunities. Bridging the digital divide requires investment in ICT infrastructure, government and private sector support for e-learning initiatives, and policies that enhance access to digital resources for all learners.

Limited Industry-Academic Collaboration

Effective leadership and entrepreneurship education require strong partnerships between academic institutions and industry stakeholders. However, many institutions operate in isolation, failing to integrate real-world business challenges into their programmes. The disconnect between academia and industry results in students receiving education that lacks practical relevance. Bridging this gap requires fostering partnerships with businesses, organizing industry-led workshops, and creating internship programmes that allow students to gain hands-on experience. Encouraging collaboration between universities, government agencies, and private sector organizations will enhance the relevance and impact of leadership and entrepreneurship education.

Sustainability Challenges

Ensuring the long-term sustainability of leadership and entrepreneurship programmes is another major challenge. Many initiatives rely on temporary funding, donor support, or short-term policy interventions, making them vulnerable to discontinuation. Without sustainable funding models and institutional commitment, these programmes may fail to achieve long-term impact. Addressing this issue requires the development of self-sustaining funding mechanisms such as public-private partnerships, entrepreneurship endowment funds, and revenue-generating initiatives within educational institutions. A strong commitment from stakeholders is essential to ensuring the continuous improvement and expansion of leadership and entrepreneurship programmes.

CONCLUSION

Educational programmes serve as a vital mechanism for leadership empowerment, entrepreneurship development, and sustainability. These programmes equip individuals with essential skills, knowledge, and competencies needed to lead effectively and create innovative business solutions. Leadership training within education fosters strategic thinking, problem-solving, and ethical decision-making, while entrepreneurship education nurtures creativity, resilience, and business acumen. Furthermore, the integration of experiential learning, mentorship, and policy support enhances the effectiveness of these programmes. Governments, educational institutions, and industry stakeholders must collaborate to ensure accessibility, relevance, and continuous improvement. Strengthening leadership and entrepreneurship education will contribute to economic resilience, job creation, and long-term societal development.

Suggestions

Based on the literature review the following suggestions were made:

- Government and Policy Makers should develop and implement policies that support leadership and entrepreneurship education by integrating practical skill development into the national curriculum.
- Government should Increase funding for educational programmes that focus on leadership empowerment and entrepreneurship to enhance accessibility and quality.
- Educational Institutions should redesign curricula to incorporate leadership and entrepreneurship training as core components of academic programmes.
- Students and Aspiring Entrepreneurs should take advantage of leadership and entrepreneurship training programmes available in educational institutions and professional development platforms.

ABSTRACT

This paper examined the politicization of educational management in Nigeria: The Way Forward. Showing its impact on policy implementation, leadership appointments, funding allocation, and institutional autonomy. The study highlighted how political interference undermines efficiency in the education sector, leading to inconsistencies in policy formulation, mismanagement of resources, and frequent disruptions due to industrial actions. Furthermore, it discusses how political influence affects decision-making processes, often prioritizing partisan interests over academic excellence and institutional stability. To address these challenges, the paper proposes strategies for depoliticizing educational management, including merit-based appointments, policy continuity, financial transparency, institutional autonomy, stakeholder engagement, and evidence-based reforms. Implementing these measures will promote good governance, enhance academic standards, and ensure a more stable education system. A collaborative approach involving policymakers, educators, and civil society is essential in fostering an education sector driven by professionalism and accountability. The paper concluded that implementing merit-based appointments, ensuring transparent financial practices, and promoting inclusive decision-making can help reduce political interference in education. Amongst others, the paper suggested that Government and relevant agencies should implement policies that ensure appointments in educational institutions are based on merit rather than political affiliations.

Keywords: Politicization, Educational Management, Policy Implementation, Institutional Autonomy, Merit-Based Appointments.

INTRODUCTION

Education is a crucial driver of national development, equipping individuals with the necessary knowledge and skills to contribute to economic growth and social progress. In Nigeria, however, the management of the education sector has become deeply entangled with political influences, affecting policy implementation, administrative efficiency, and overall educational quality. Political interference in educational management has led to policy inconsistencies, disruptions in academic leadership, and resource misallocation, all of which undermine the effectiveness of the education system (Okebukola, 2020). The frequent changes in government policies, often dictated by political motives rather than the actual needs of the sector, have resulted in instability, making it difficult for educational institutions to achieve long-term goals.

Moreover, political interference in the appointment of educational administrators has further weakened the sector. Rather than selecting leaders based on competence and experience, appointments are often influenced by political affiliations, leading to inefficiencies in governance and decision-making (Ajayi & Ekundayo, 2008). This practice has negatively impacted the management of universities, polytechnics, and secondary schools, where leadership instability and administrative inefficiencies have resulted in poor planning, mismanagement of resources, and a decline in academic standards. Furthermore, funding disparities caused by political considerations have led to unequal resource distribution among educational institutions. Certain regions and schools receive preferential treatment due to their political affiliations, while others struggle with inadequate infrastructure, poor remuneration for teachers, and insufficient learning materials (Olanrewaju, 2018). These funding inconsistencies have contributed to the decline in the quality of education, with institutions facing frequent strikes, delays in academic calendars, and a general decline in student performance.

Additionally, the politicization of educational management has eroded institutional autonomy, with political actors dictating policies that do not align with the needs of the education sector. The undue influence of politicians has affected curriculum development, employment processes, and overall governance, reducing the ability of institutions to function independently and professionally (Obanya, 2018). Instead of focusing on research, innovation, and academic excellence, educational institutions are often forced to conform to political interests, which limits their ability to produce graduates who can compete on a global scale.

Addressing the challenges associated with the politicization of educational management in Nigeria requires urgent reforms that prioritize merit-based leadership, stable policies, and adequate funding. Ensuring the autonomy of educational institutions and reducing political interference will enhance the effectiveness of the education system and contribute to national development. Without addressing these issues, the Nigerian education sector will continue to face systemic problems that hinder its progress and limit its ability to provide quality education for all.

THEORETICAL FRAMEWORK

The study is anchored on Systems Theory developed by Ludwig von Bertalanffy 1968 as cited in Fritjof Capra (2014).

Systems Theory

Systems Theory, originally developed by Ludwig von Bertalanffy in 1968 and later expanded by Fritjof Capra (2014**)**, the theory provided a comprehensive framework for understanding complex systems, including educational management. The theory posits that all systems, whether biological, social, or organizational, function as interdependent units composed of interconnected components. Rather than viewing entities in isolation, Systems Theory emphasizes the holistic interaction between different parts of a system and how they influence one another to maintain equilibrium. This theoretical perspective is particularly useful in analyzing how political interference affects the administration of educational institutions, as it highlights the disruption caused by external influences on the internal functioning of the education system.

Education, as a system, consists of various components such as policies, administrators, teachers, students, infrastructure, and funding mechanisms, all of which interact dynamically. The application of Systems Theory to educational management in Nigeria reveals that political interference introduces instability into the system, affecting governance, policy continuity, and institutional autonomy. When political actors impose policies based on personal or party interests rather than academic needs, the education system experiences an imbalance that results in poor decision-making, misallocation of resources, and administrative inefficiencies (Capra, 2014). For example, the appointment of university vice-chancellors, heads of polytechnics, and principals in secondary schools is often influenced by political considerations rather than merit. This disrupts the leadership structure, leading to conflicts, low staff morale, and a decline in the quality of education.

Furthermore, Systems Theory explains how changes in one part of a system affect the entire structure. Political instability in Nigeria has led to inconsistent policies in the education sector, with each administration introducing new reforms while abandoning existing ones. This lack of continuity weakens the system, as policies fail to achieve long-term impact due to frequent modifications dictated by political motives. Additionally, funding for educational institutions is often influenced by political affiliations, leading to disparities in resource allocation. Universities in politically favored regions receive better financial support, while others struggle with inadequate infrastructure, poor research funding, and delays in staff salaries. These imbalances create inefficiencies that hinder the overall development of the education system.

The relevance of Systems Theory to this study lies in its ability to illustrate how political interference distorts the interconnected components of educational management. A well-functioning education system requires stability, merit-based leadership, and consistent policies. By applying this theory, it becomes evident that depoliticizing educational management in Nigeria would restore balance, improve policy implementation, and enhance institutional efficiency. Strengthening the autonomy of educational institutions, ensuring equitable resource distribution, and prioritizing professional leadership appointments would help stabilize the system, allowing it to function optimally and contribute to national development.

CONCEPTUAL CLARIFICATION

Concept of Education

Education serves as the foundation for individual and societal development, facilitating the transmission of knowledge, values, skills, and culture across generations. It encompasses formal,

non-formal, and informal learning processes that enable individuals to acquire the necessary competencies for personal growth and national progress. Formal education is structured and delivered through schools, colleges, and universities, while non-formal education includes vocational training, adult literacy programs, and professional skill acquisition. Informal education, on the other hand, occurs through life experiences, family upbringing, and peer interactions. Education is essential for fostering intellectual development, enhancing critical thinking, and promoting socio-economic advancement (Adeyemi & Uko-Aviomoh, 2020).

Furthermore, education is central to human capital development, as it equips individuals with the knowledge and technical skills required for economic participation. Societies that prioritize quality education often experience higher levels of innovation, productivity, and technological advancement. In Nigeria, education is regarded as a tool for national integration, economic growth, and democratic participation. The National Policy on Education highlights the importance of providing equal access to education, ensuring that every Nigerian benefits from lifelong learning opportunities (Okeke, 2019). However, disparities in educational access remain a pressing issue, particularly in rural areas where infrastructural deficits and socio-economic barriers hinder school enrollment.

Moreover, the role of education extends beyond academic achievements, as it also shapes social behaviors, moral values, and civic responsibility. Schools and higher institutions serve as platforms for social interaction, cultural exchange, and leadership development. In Nigeria, education has been instrumental in fostering unity among diverse ethnic and religious groups by promoting shared national values and historical consciousness (Obanya, 2018). However, the effectiveness of the education system is often challenged by issues such as outdated curricula, poor teaching methodologies, and inadequate teacher training. Addressing these challenges requires continuous reforms, investment in educational infrastructure, and the adoption of modern pedagogical strategies.

Additionally, education plays a crucial role in reducing poverty and inequality by empowering individuals with skills for employment and entrepreneurship. It provides a pathway for social mobility, enabling people from disadvantaged backgrounds to improve their economic standing. Research has shown that higher educational attainment is linked to increased income levels and better employment opportunities (Adebayo, 2021). In Nigeria, efforts to expand access to education through initiatives such as the Universal Basic Education (UBE) program have contributed to increased school enrollment. However, the quality of education remains a concern due to challenges such as teacher shortages, inadequate funding, and policy inconsistencies.

Education is a fundamental pillar of national development, influencing various aspects of human and societal progress. It not only enhances cognitive and professional skills but also promotes social cohesion, ethical values, and economic prosperity. Strengthening Nigeria's education system requires a commitment to policy continuity, investment in teacher development, and the integration of digital learning technologies. Without these interventions, the country risks limiting its potential for sustainable growth and global competitiveness.

Educational Management

Educational management refers to the administration, planning, and supervision of educational institutions to ensure effective teaching and learning processes. It encompasses a range of activities, including policy formulation, curriculum implementation, financial management, and

human resource coordination. The goal of educational management is to create an organized and efficient learning environment that promotes academic excellence, institutional growth, and national development. In Nigeria, educational management plays a vital role in addressing systemic challenges such as inadequate infrastructure, funding constraints, and administrative inefficiencies (Nwosu & Anyanwu, 2019).

Furthermore, effective educational management requires collaboration among various stakeholders, including government agencies, school administrators, teachers, students, and community members. The Nigerian education sector is regulated by bodies such as the National Universities Commission (NUC) and the Universal Basic Education Commission (UBEC), which oversee policy implementation and institutional accreditation. However, bureaucratic inefficiencies and political interference often undermine the effectiveness of these regulatory bodies. Strengthening institutional autonomy while ensuring accountability is essential for improving educational governance in Nigeria (Ogunyemi, 2020).

Moreover, financial management is a critical component of educational administration, as funding determines the availability of learning resources, infrastructure development, and staff welfare. The Nigerian government has historically allocated insufficient funds to education, falling below the UNESCO-recommended benchmark of 15–20% of the national budget. As a result, many schools and universities struggle with inadequate facilities, outdated teaching materials, and poorly motivated teachers. Addressing these funding challenges requires increased budgetary allocations, improved financial accountability, and strategic public-private partnerships to supplement government resources (Afolabi, 2022).

Additionally, leadership and decision-making play a crucial role in educational management. Institutions with strong leadership structures tend to perform better in terms of academic excellence, staff motivation, and student outcomes. However, weak leadership and corruption in educational institutions have negatively impacted service delivery. Cases of mismanagement, favoritism, and poor planning have contributed to declining educational standards in Nigeria. Implementing transparent leadership frameworks and professionalizing school administration can enhance the efficiency of educational management and improve learning outcomes (Eze, 2022).

Educational management is essential for ensuring the smooth operation of schools and higher institutions. It involves a range of administrative and leadership functions that impact teaching quality, institutional development, and student performance. Strengthening Nigeria's educational management system requires reforms in governance, financial accountability, and leadership structures. Moreover, adopting innovative management strategies and investing in human capital development, Nigeria can build a more resilient and effective education system.

The Politicization of Education in Nigeria

The politicization of education in Nigeria refers to the excessive influence of political actors in educational policymaking, administration, and governance. Instead of allowing education to be managed based on research-driven policies, political considerations often dictate decision-making, leading to inconsistencies and inefficiencies. Political interference is evident in areas such as the appointment of school administrators, funding allocation, curriculum development, and policy implementation. As a result, the education sector frequently experiences instability, affecting students, teachers, and institutional credibility (Okonjo, 2021).

Furthermore, frequent changes in government often lead to abrupt policy shifts, disrupting educational planning and implementation. Each administration introduces new reforms that sometimes contradict previous policies, creating confusion and reducing the effectiveness of long-term educational programs. The lack of policy continuity has hindered the development of a stable and sustainable education system. Additionally, political leaders sometimes use educational institutions for partisan interests, appointing administrators based on political loyalty rather than competence. This practice weakens institutional governance and reduces the quality of decision-making in schools and universities (Oladipo, 2020).

Moreover, funding allocation in the education sector is often influenced by political considerations. Instead of distributing resources based on institutional needs, funds are sometimes allocated to regions or institutions favored by those in power. This has led to disparities in educational quality, with some schools and universities receiving better support while others struggle with financial constraints. The politicization of funding further exacerbates educational inequality, particularly in rural areas where schools lack basic infrastructure and qualified teachers (Adewale, 2019).

Additionally, political interference in curriculum design and policy implementation affects the relevance and effectiveness of education. In some cases, government officials prioritize policies that align with their political ideologies rather than evidence-based recommendations. This has resulted in inconsistencies in curriculum reforms and a disconnect between educational programs and labor market demands. Furthermore, frequent industrial actions by teachers and university staff, often caused by political disagreements over funding and working conditions, have disrupted academic activities and reduced the credibility of the education system (Nwachukwu, 2022).

The politicization of education in Nigeria undermines the efficiency and stability of the education sector. Political interference in policymaking, funding, and institutional administration has contributed to declining educational standards. Addressing this issue requires insulating education from political influences, promoting merit-based appointments, and ensuring policy continuity. Without these reforms, Nigeria's education system will continue to struggle with inefficiencies that hinder national development.

Historical Context of Political Influence on Education in Nigeria

Education in Nigeria has long been subject to political influence, dating back to the colonial period when British administrators designed educational policies to serve their governance needs rather than national development. During this era, missionary schools played a central role in education, leading to disparities between the northern and southern regions, as colonial authorities restricted Western education in the north to maintain indirect rule while allowing greater missionary activities in the south. This uneven educational development created long-term structural inequalities that persisted after independence, as regional governments sought to assert control over education to reflect their political and ethnic priorities rather than national cohesion. The First Republic saw an expansion of regional universities, which, while aimed at increasing access to higher education, also reflected the political rivalries of the time and reinforced the perception of education as a tool for political control rather than development (Umeh, 2023).

During military rule, the Nigerian government tightened its grip on education, nationalizing universities and placing them under strict state control. Military regimes often

appointed vice-chancellors and other university administrators based on political loyalty rather than academic competence, undermining institutional autonomy and academic freedom. Additionally, frequent policy shifts disrupted educational planning, with governments arbitrarily modifying curricula and funding structures to align with political objectives rather than long-term educational goals. The Structural Adjustment Programme of the 1980s further worsened the situation, as austerity measures led to severe underfunding, prompting mass protests by students and strikes by lecturers, which became a recurring challenge in Nigerian universities.

The return to democracy in 1999 did not eliminate political interference in education, as successive civilian administrations continued to use educational institutions as platforms for political patronage. State and federal governments frequently influenced the selection of university leaders, prioritizing political considerations over merit and competence. Furthermore, political leaders have established universities to fulfill electoral promises rather than to address educational gaps, leading to a proliferation of poorly funded institutions lacking essential infrastructure and personnel. The persistent instability caused by government interference has resulted in frequent strikes, inconsistent policies, and declining academic standards, making it difficult for Nigeria's education system to compete globally (Ugochukwu, 2022). Without deliberate efforts to insulate education from political influence, the sector will continue to suffer from mismanagement, instability, and a failure to fulfill its role in national development.

The Impact of Politics on Educational Management in Nigeria

Politics plays a central role in the management of education in Nigeria, influencing policies, funding, administration, and institutional stability. The government's direct control over the education sector allows political actors to shape educational priorities, sometimes in ways that do not align with national development goals. Political considerations often override academic interests, leading to inconsistencies in policy implementation and disruption in educational progress (Alabi, 2021). Political instability has caused frequent changes in leadership within the Ministry of Education, resulting in conflicting policies and inadequate long-term planning. This lack of continuity affects curriculum development, teacher recruitment, and overall governance in the sector (Okafor, 2020).

Moreover, financial mismanagement in the education sector has been exacerbated by political influences. Political leaders often allocate resources based on party interests rather than institutional needs, leading to underfunding in critical areas such as infrastructure, teacher welfare, and research development. The tendency of politicians to use education projects as campaign tools results in short-term interventions that fail to address systemic issues (Eneh, 2019). Political control over budgetary allocations has also led to regional disparities in educational development, where certain states receive more funding due to political affiliations rather than actual demand (Usman, 2021).

Additionally, political interference affects the appointment of school administrators, leading to leadership crises in many institutions. Instead of appointing leaders based on merit, political actors often favor candidates with political affiliations, undermining institutional autonomy and effective management. This has led to inefficiencies in decision-making processes, as politically appointed administrators may lack the expertise needed to drive educational reforms. Furthermore, these appointments often create conflicts between management and staff, particularly when academic unions perceive leadership selections as politically motivated rather than merit-based (Ogunleye, 2020).

Moreover, the politicization of educational management in Nigeria has contributed to frequent industrial actions by academic and non-academic staff. Many strikes by the Academic Staff Union of Universities (ASUU) and other unions result from the government's failure to honor agreements concerning salaries, funding, and working conditions. These strikes have led to prolonged disruptions in academic calendars, affecting students' learning and the overall efficiency of the education system. Political leaders often use education-related negotiations as bargaining tools to gain political favor rather than implementing sustainable policies that benefit the sector (Ibekwe, 2021).

Furthermore, the influence of political actors in policy formulation has created inconsistencies in the implementation of educational reforms. Each new administration introduces policies that align with its political ideology, often discarding previous policies without proper evaluation. This approach has led to a lack of continuity in educational development plans, negatively impacting curriculum implementation, teacher training, and infrastructural growth. For instance, changes in the structure of tertiary education have been implemented without adequate consultation with stakeholders, resulting in confusion and inefficiencies in administration (Chijioke, 2019). Politics on educational management in Nigeria is largely negative due to inconsistent policies, political appointments, financial mismanagement, and frequent industrial actions. Addressing these issues requires a more transparent and accountable approach to policy implementation, increased financial commitment to education, and merit-based leadership appointments. Without these reforms, the education sector will continue to struggle with inefficiencies that hinder national development.

Political Interference in Educational Institutions

Political interference in educational institutions in Nigeria has significantly affected the quality, independence, and efficiency of academic administration. One of the most prominent ways political influence manifests is through the appointment of key administrators in tertiary institutions. Many vice-chancellors, rectors, and provosts are selected based on their political connections rather than their qualifications and leadership capabilities. This practice compromises the autonomy of educational institutions and often results in conflicts between university management and academic unions. When administrators are politically appointed, they may prioritize political interests over academic excellence, leading to poor governance and decision-making within the institutions (Ezeobi, 2021).

Additionally, political interference influences financial allocations to educational institutions. Instead of distributing resources equitably, government officials often allocate funds based on political affiliations, leaving some institutions underfunded. This results in disparities in infrastructure, research funding, and student support services. Institutions in opposition-controlled states sometimes experience budget cuts or delays in disbursements, which negatively impact their ability to provide quality education. The politicization of financial resources has also led to corruption, where funds meant for education development are diverted for political campaigns or personal enrichment (Bamidele, 2022).

Moreover, the curriculum and academic policies in Nigerian institutions are often subject to political influences. Government officials sometimes impose ideologically driven changes to the curriculum without consulting educational experts or considering global best practices. This leads to inconsistencies in curriculum content, making it difficult for students to compete in the global labor market. Political involvement in curriculum development has also resulted in the

suppression of critical thinking in education, as some topics that are politically sensitive are omitted from academic discourse (Ogunbanjo, 2021).

Furthermore, industrial actions in educational institutions are frequently triggered by political interference. Government officials often fail to fulfill agreements made with academic unions, leading to repeated strikes by lecturers and university staff. These strikes disrupt academic calendars and reduce the quality of education provided in Nigerian institutions. Many of these disputes stem from political decisions that prioritize short-term gains over long-term educational improvements. The politicization of educational institutions has also led to favoritism in student admissions and employment opportunities, where individuals with political connections receive preferential treatment over more qualified candidates (Ifeanyi, 2021).

Political interference in Nigerian educational institutions undermines their ability to function effectively. It affects leadership selection, financial allocation, curriculum development, and institutional autonomy. To address these challenges, policies should be enacted to protect educational institutions from excessive political control. Ensuring that leadership appointments are based on merit, increasing financial transparency, and implementing long-term educational policies can help mitigate the negative effects of political interference in the Nigerian education sector.

Government Control and Autonomy of Institutions
